"Through creativity, collaboration, and an unwavering commitment to innovation, let us continue building a world where ideas become opportunities."

ALIREZA RASTEGAR

It is with great pride and sincere pleasure that I welcome you to the Silicon Valley International Invention Festival (SVIIF 2026) a global celebration of creativity, scientific excellence, entrepreneurship, and the limitless potential of human innovation.

Since its establishment in 1968, the International Federation of Inventors' Associations (IFIA) has remained committed to empowering inventors, promoting innovation, encouraging international cooperation, and creating opportunities for creative minds to transform ideas into solutions that benefit humanity.

On this special occasion, I express my deepest gratitude to the visionary founders of IFIA, our former Presidents, Executive Committee members, national representatives, volunteers, and international partners whose dedication and leadership have shaped our Federation over the decades. Their enduring efforts have established IFIA as one of the world's leading organizations supporting inventors and fostering cooperation among governments, universities, research institutions, industries, and innovation ecosystems worldwide.

Today, innovation is one of humanity's greatest forces for addressing global challenges. From healthcare and clean energy to artificial intelligence, sustainable development, education, agriculture, and advanced manufacturing, inventors continue to transform ideas into solutions that improve lives and build a better future.

This year marks another important milestone with the official revival of the International Youth Invention Olympiad, originally established in 1998 with the support of the World Intellectual Property Organization (WIPO) and IFIA's international partners. Through this initiative, we reaffirm our commitment to discovering, encouraging, and empowering the next generation of innovators while preserving a legacy that continues to inspire young inventors worldwide.

Accordingly, SVIIF 2026 proudly features two distinguished international competition divisions: the General Inventors Division and the International Youth Invention Olympiad. This renewed structure provides age-appropriate evaluation under internationally recognized standards, creating a more professional, equitable, and inspiring environment for innovation.

The Silicon Valley International Invention Festival reflects the very values upon which IFIA was founded. It is where inventors meet investors, researchers collaborate with industry, universities connect with entrepreneurs, and ideas become technologies with global impact. Beyond competition, SVIIF is a platform for cooperation, commercialization, knowledge exchange, and international friendship.

My sincere appreciation goes to our international partners, supporting organizations, distinguished members of the International Jury, academic and industrial collaborators, sponsors, volunteers, and the organizing committee whose dedication has made this remarkable event possible.

To every participant, I extend my heartfelt congratulations. Every invention reflects courage, perseverance, creativity, and the determination to build a better future through knowledge and innovation. Whether you are presenting your first invention or the result of decades of experience, your contribution enriches our global innovation community.

On behalf of the International Federation of Inventors' Associations (IFIA), I wish you an inspiring and successful experience at SVIIF 2026. May this festival open new opportunities for collaboration, investment, friendship, and technological advancement while bringing innovative solutions closer to the people and communities they are meant to serve.

The future is not something we inherit it is something we invent. Together, through creativity, collaboration, and an unwavering commitment to innovation, let us continue building a world where ideas become opportunities, inventions become solutions, and innovation serves humanity.

With my highest regards,

Alireza Rastegar
President
International Federation of Inventors' Associations (IFIA)

Rastegar

"SVIIF celebrates the best inventions from around the world. It also acts as a bridge between inventors and investors."

MR. MARCO M. ALEMÁN

I warmly congratulate the International Federation of Inventors' Associations (IFIA) on organizing the Silicon Valley International Invention Festival (SVIIF 2026), to be held in Santa Clara, California.

SVIIF has become a trusted platform for innovators, giving participants some of the best support and resources available at any invention exhibition.

The World Intellectual Property Organization (WIPO) is honored to serve as co-patron of this event, alongside IFIA and with the generous support of the United Inventors Association (UIA). WIPO is firmly committed to helping innovators turn their ideas into successful products, building on our long-standing partnerships.

SVIIF celebrates the best inventions from around the world. It also acts as a bridge between inventors and investors and opening new markets across borders.

Events like SVIIF reflect the energy of the global innovation landscape that we track each year through the WIPO Global Innovation Index (GII). They remind us that good ideas know no borders, and that bringing inventors together is essential for keeping innovation strong and a force for growth and progress.

WIPO provides key services to support innovators. Our global network of Technology and Innovation Support Centers (TISCs) provides key support for innovators. These centers offer a wide range of services, including access to specialized technology databases, expert search and analysis, licensing opportunities, and help in bringing inventions to market.

The WIPO INSPIRE platform gives innovators access to world-class intellectual property resources at little or no cost. It helps them gain essential knowledge and make use of patent databases, legal status information, advanced patent analytics, and technology transfer strategies.

WIPO is also a leader in intellectual property analytics, providing insights that support economic growth and development. Our biennial WIPO Technology Trends (WITT) publication combines patent data with scientific research, policy analysis, economic impact assessments, and expert commentary. Together with our patent landscape reports, these resources help guide policy decisions, research planning, and technology transfer.

The Inventor Assistance Program (IAP) is one of our most valuable initiatives.

It connects inventors and start-ups with limited resources to volunteer patent professionals, who offer free guidance to help protect their inventions both at home and abroad. We are especially grateful for IFIA's continued sponsorship of this program, and I extend my personal thanks to Mr. Alireza Rastegar, President of IFIA, for his organization's steadfast support.

As SVIIF 2026 prepares to showcase the next generation of world-changing inventions, WIPO reaffirms its commitment to building an inclusive and dynamic global innovation ecosystem. We look forward to the new partnerships, bold ideas, and lasting connections this Festival will inspire.

I wish SVIIF 2026 every success and look forward to the remarkable innovations it will reveal.

Marco m. Alemán
Assistant Director General
World Intellectual Property Organization (WIPO)

"SVIIF brings global innovators together to showcase groundbreaking ideas, build partnerships, and shape the technologies and solutions of tomorrow."

LISA M. GILLMOR

Greetings.
On behalf of the City of Santa Clara, it is my pleasure to welcome you to the 5th Silicon Valley International Invention Festival (SVIIF 2026) at the Santa Clara Convention Center.

In the heart of Silicon Valley, Santa Clara is proud to host innovators, entrepreneurs, researchers, students, investors, and industry leaders from around the world. SVIIF has become a premier international forum where groundbreaking ideas are showcased, meaningful partnerships are formed, and the next generation of technologies and solutions are introduced to a global audience.

Innovation has been a defining characteristic of our community, and events like SVIIF demonstrate the power of creativity, collaboration, and entrepreneurship to address today's challenges and shape tomorrow's opportunities. We are honored that Santa Clara serves as the gathering place for this remarkable exchange of ideas and cultures.

I extend my sincere congratulations to the organizers, exhibitors, judges, and participants whose dedication and ingenuity make this festival possible. Your contributions help inspire future innovators while advancing scientific discovery, technological progress, and international cooperation.

Thank you for choosing Santa Clara as the home of the 5th Silicon Valley International Invention Festival. I wish you an engaging, successful, and memorable event.

With my highest regards

Mayor Lisa M. Gillmor

"Events like SVIIF bring our mission to life, highlighting the transformative impact of invention on industries, communities, and lives."

CARMINE DENISCO

Dear Inventors, Associations, & Participants of SVIIF, It is with great pride and excitement that I welcome you to the 2026 Silicon Valley International Invention Festival (SVIIF).

On behalf of the United Inventors Association (UIA), I'd like to thank the International Federation of Inventors' Associations (IFIA), President Alireza Rastegar, and the entire organizing team for putting together this important global gathering. We are honored to support an event that champions creativity, celebrates innovation, and uplifts the spirit of inventorship worldwide.

SVIIF serves as a vital platform for inventors to showcase their work, gain valuable exposure, and forge lasting connections with industry leaders, investors, and fellow entrepreneurs. At the UIA, our mission is to provide education, advocacy, and resources to inventors across the United States and around the globe. Events like SVIIF bring our mission to life, highlighting the transformative impact of invention on industries, communities, and lives.

This year's festival continues to build bridges between multiple countries, breaking down barriers and opening doors for collaboration. The caliber of inventions presented here speaks volumes about the dedication and imagination of the global inventor community. It is truly inspiring to witness firsthand the talent and passion that exists in this space.

To all participants, whether you're showcasing a prototype, building connections, attending virtually, or simply here to learn, I encourage you to embrace every opportunity this event offers. Let it be a launchpad for your next big idea, your next partnership, or your next step forward.

Thank you for your continued contributions to innovation and entrepreneurship. I look forward to seeing the future you're helping to shape.

With appreciation,
Carmine Denisco
President
United Inventors Association (UIA)

*"It celebrates not only
remarkable inventions
but also the
determination,
imagination, and
perseverance that
transform ideas into
meaningful innovations."*

JOHN J. CALVERT

Dear Inventors, Young Innovators, Researchers, Entrepreneurs, Distinguished Guests, and Members of the International Innovation Community,

It is both an honor and a privilege to welcome you to the Silicon Valley International Invention Festival (SVIIF 2026), taking place from 14–16 August 2026 in Santa Clara, California, at the heart of Silicon Valley the world's leading center of innovation, entrepreneurship, and technological advancement.

SVIIF is more than an international invention festival; it is a global platform where creativity, scientific excellence, and entrepreneurial vision come together to address real-world challenges and create solutions that improve lives. It celebrates not only remarkable inventions but also the determination, imagination, and perseverance that transform ideas into meaningful innovations.

As President of the International Jury, I am honored to work alongside a distinguished panel of internationally recognized experts who are committed to ensuring that every invention is evaluated with fairness, integrity, transparency, and the highest professional standards. Our responsibility extends beyond selecting award recipients. We are entrusted with recognizing originality, encouraging excellence, and celebrating the remarkable achievements of inventors whose work contributes to the advancement of science, technology, industry, and society.

This year's festival also marks an important step in the continued evolution of the competition. Following the official revival of the International Youth Invention Olympiad, originally established by IFIA in 1998 with the support of the World Intellectual Property Organization (WIPO) and IFIA's international partners, SVIIF now presents two independent international competition divisions: the General Inventors Division and the International Youth Invention Olympiad. This structure enables both adult and young innovators to be evaluated within age-appropriate categories under dedicated judging criteria, further strengthening fairness, professionalism, and international standards of excellence.

Innovation today is measured not only by originality, but also by its ability to solve problems, improve quality of life, support sustainable development, and create lasting value for humanity. During the evaluation process, the International Jury will carefully consider originality, scientific merit, technical excellence, practical application, commercial potential, sustainability, and the broader impact of each invention.

Beyond medals and awards, SVIIF provides a unique opportunity to connect with fellow inventors, researchers, universities, industry leaders, investors, intellectual property professionals, and innovation organizations from around the world. Many successful collaborations, commercialization opportunities, and lifelong professional relationships begin through exchanges at events like this.

I extend my sincere appreciation to the International Federation of Inventors' Associations (IFIA), the organizing committee, my fellow jury members, our partners, sponsors, volunteers, and everyone whose dedication and professionalism have made this international gathering possible.

To every participant, I encourage you to present your innovation with confidence and pride. Every invention represents curiosity, perseverance, and the courage to challenge conventional thinking. Regardless of the final results, your work contributes to a global culture of innovation and inspires future generations of inventors.

On behalf of the International Jury, I wish you every success throughout SVIIF 2026. May this festival inspire new ideas, meaningful collaborations, and lasting friendships, while opening new opportunities for your innovations to make a positive impact around the world.

*I look forward to discovering your remarkable achievements
and celebrating the ingenuity that continues to shape our
future.*

With my highest regards,

John J. Calvert
SVIIF Board Committee Member & President of the Jury
Former Senior Advisor at the United States Patent and Trademark Office (USPTO)

*"Yet true
achievement lies in
creating something
that can improve
lives, strengthen
communities,
advance industry,
or protect our
environment."*

DR. AMIN GHAFORIPOUR

As an SVIIF Board Committee Member and Chief Jury Judge, it is my great privilege to welcome inventors, innovators, researchers, entrepreneurs, and young talents from around the world to the Silicon Valley International Invention Festival.

SVIIF is more than a competition. It is a global meeting place where creative minds come together to present solutions, exchange knowledge, build meaningful partnerships, and help shape a better future. Every invention featured at this festival represents courage: the courage to question what already exists, transform an idea into reality, and pursue progress despite uncertainty and challenge.

The Jury Board recognizes the dedication, technical achievement, originality, usefulness, and potential impact behind each project. Our responsibility is not only to evaluate inventions with professionalism, fairness, and integrity, but also to honor the remarkable effort of every participant. An award is an important distinction, yet true achievement lies in creating something that can improve lives, strengthen communities, advance industry, or protect our environment.

To all participants, I encourage you to use this international stage to share your vision, learn from one another, and develop connections that continue long after the festival. Innovation becomes most powerful when it crosses borders, disciplines, and generations.

On behalf of the SVIIF Board Committee and Jury Board, I extend my sincere appreciation to the inventors, families, mentors, institutions, partners, volunteers, and organizers whose commitment makes this event possible. May your experience at SVIIF inspire new ideas, lasting collaborations, and the confidence to continue turning imagination into meaningful achievement.

Dr. Amin Ghafoori Pour, PE
SVIIF Board Committee Member & Chair of the Jury Board
Professor at San José State University
Director of the SEI San Francisco Chapter
CEO & President of Padir Consulting Engineers

The following criteria are
**USED BY THE SVIIF
JURY BOARD**

TO ASSESS THE INVENTIONS

Patent Status

National, international, and PCT **patents increase scores**. More patents and higher levels of protection earn higher points.

Environmental

Sustainable, eco-friendly inventions score higher. **Solutions that actively reduce environmental harm** are awarded top marks.

Stage of Development

From **early concepts** to fully market-ready products. Prototypes and ready-to-launch inventions receive higher scores.

Scientific Certification

Recognized **certifications** enhance **credibility**. Both the number and validity of certifications affect the score.

Usefulness & Innovation

Practical benefits and **clear improvements** over existing solutions are rewarded.

Market Demand

Inventions with broad and ongoing public demand score higher. Seasonal or limited-use inventions score lower.

Economic Potential

High potential for revenue generation and job creation earns additional points.

Technological Advancement

The more advanced and innovative the technology, the higher the score.

Commercialization Readiness

Inventions that are fully prepared for market launch, particularly those supported by feasibility studies, receive the highest scores.

SILICON VALLEY INTERNATIONAL INVENTION FESTIVAL **JURY BOARD**

JOHN CALVERT

SVIIF Board Committee Member
& President of the Jury
Former Senior Advisor at the United States
Patent and Trademark Office (USPTO)

DR. AMIN GHAFOORIPOUR

SVIIF Board Committee Member
& Chair of the Jury Board
Professor at San José State University, Director of
the SEI San Francisco Chapter, and CEO &
President of Padir Consulting Engineers

DR. WIPARAT DE-ONG

Honorary Chair of the Jury
Executive Director of the
National Research Council of Thailand (NRCT)

DR. T. KIM PARNELL, PE, PHD

ASME Fellow; IEEE Member; Silicon Valley
Engineering Council (SVEC) Hall of Fame
Inductee; Member of the IEEE Consultants'
Network of Silicon Valley (IEEE-CNSV)

MATT NUCCIO

SVIIF Board Committee Member
Toy Designer, Co-Credited with Designing Creepy
Crawlers, Tickle Me Elmo, the Nintendo Power Glove,
POGs, and Laser Challenge; Executive Committee
Member of the United Inventors Association and IFIA

SILICON VALLEY INTERNATIONAL INVENTION FESTIVAL **JURY BOARD**

CARMINE DENISCO

SVIIF Board Committee Member
President of the
United Inventors Association (UIA)
Successful Entrepreneur, Inventor, Author, Podcaster,
Investor, and Patent & Trademark Holder

ROY MOREJON

Co-Founder & President of Enventys Partners
Distinguished Authority in Bringing Innovative
Physical Products to Market

CHRISTINA MCTAGGART

SVIIF Board Committee Member
Chief Building Official & Community
Development Services Manager, City
of Redwood City

SARANYA VEMURI

Principal Product Manager – Tech at Amazon
Former Product Strategy Leader at Meta & Google
Product Executive with 10+ Years of Experience in AI,
Consumer Technology, Hardware, Business Transformation,
Innovation, Scalability, and Emerging Technologies

CARRIE WHITE

Director of Student Innovation at the
National Academy of Inventors (NAI)

SILICON VALLEY INTERNATIONAL INVENTION FESTIVAL **JURY BOARD**

Inventor(s):

Dr. Mehdi Korki

Invention Title:

Smart-Grid Power Line Outage Detector

Invention Description:

An intelligent system that detects and pinpoints power line outages across smart grids using compressive sensing. By exploiting the sparse, structured pattern of outages, it identifies faults from far fewer measurements than conventional methods, enabling faster, lower-cost fault localization and self-healing, more resilient power networks.

Category:

P) Energy - Renewable and green energy

Invention ID: **AU - 6102**

Inventor(s):

Dr. Mehdi Korki

Invention Title:

Post-Quantum Secure Control for Distributed Energy Grids

Invention Description:

A cybersecurity system that protects grid control signals in distributed energy networks using post-quantum cryptography. It shields SCADA and DER command channels against future quantum-computer attacks, ensuring the authenticity and integrity of dispatch signals for solar, battery and microgrid assets across a resilient, quantum-ready smart grid.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: **AU - 6103**

Inventor(s):

Dr. Mehdi Korki

Invention Title:

One-Bit Compressive Sensing for Wireless Sensor Networks

Invention Description:

A distributed sensing method that reconstructs signals from just one bit, the sign, per measurement, slashing sensor hardware cost and power use. Robust against impulsive noise, it lets large wireless sensor networks cooperatively and reliably estimate data in harsh conditions, ideal for IoT, smart grids and industrial monitoring.

Category:

B) Electronics - Electricity - Methods of Communication

AZERBAIJAN

— Intellectual Property Agency of the Republic of Azerbaijan —

Azerbaijan's intellectual property landscape reflects a developing innovation system anchored in Baku and supported by a broader agenda of economic diversification. The national IP office, the Intellectual Property Agency of the Republic of Azerbaijan, administers protection across patents, trademarks, industrial designs and related rights, while the country's WIPO membership links domestic applicants to the global IP architecture. Patent volumes remain modest by international standards, yet they provide a useful indicator of inventive activity in fields connected to engineering, manufacturing, energy services, chemistry, digital solutions and applied research. Azerbaijan's wider economy continues to draw strength from hydrocarbons, but national development priorities also emphasize logistics, agribusiness, technology upgrading, the digital economy and knowledge-based growth. In this context, intellectual property serves as an enabling infrastructure for commercialization, technology transfer and protection of locally generated ideas. In the Global Innovation Index 2025, Azerbaijan ranked 94th, underscoring both current constraints and future opportunities for innovation-led development.

Sources: WIPO Statistical Country Profile: Azerbaijan (patent indicators, latest available data for 2024; profile released 2026); WIPO Country Profile: Azerbaijan (office identity, WIPO membership, GII 2025); World Bank Open Data (Population 2025; GDP current US\$, 2025).

Invention Title:

A.I.N.O.S - Artificial Intelligence Navigation and Observation System

Invention Description:

A smart 360° robotic laser-tracking platform integrated with a web-based simulation hub. Users can identify and track celestial bodies in real-time even during daylight. It bridges digital design with physical reality, allowing students to simulate space hardware and source parts locally to build their own amateur-scale cosmic devices.

Invention Title:

S.O.N.I.A - Space Observation and Navigation Intelligence Assistant

Invention Description:

S.O.N.I.A. a modular drone KIT for search, rescue, and research. AI thermal and visual detection finds victims day or night; autonomous all-weather flight reaches them. A precision winch delivers aid, two-way audio reassures survivors, and coordinated swarms scale the search, streaming live 3D maps and hazard data to command teams.

Category:

E) Security - Rescue - Alarm

**Invention ID: AZ - 9904****Inventor(s):**

Mr. Safarali Safarli

Invention Title:

Azercell Network Drone Complex

Invention Description:

An autonomous aerial system for crisis response, combining tethered network drones that deliver continuous mobile connectivity over disaster zones with mapper drones that capture real-time imagery and 3D terrain maps. It restores communications, enables rapid damage assessment, and strengthens emergency operations.

**Invention ID: AZ - 9905****Inventor(s):**

Ms. Malak Baghirova

Invention Title:

Krilz

Invention Description:

KRILZ-AI is an aerospace testing platform for autonomous navigation in GNSS-denied environments. Using EKF-based sensor fusion and an adaptive AI layer, it ensures stable trajectory estimation under high G-loads and vibration. It serves as a scalable FTaaS model, bridging the gap between simulation and real-world flight validation.

Category:

Mr. Safarali Safarli, Ms. Laman Safarli, Ms. Malak Baghirova, Mrs. Sevinj Aliyeva, Mrs. Arzu Ibrahimova, Mr. Anar Mammadov, Mr. Togrul Guluzade, Mr. Tunjay Isgandarli, Mr. Kamran Mahmudov, Mr. Nurlan Abdullayev, Mr. Javid Jalilov, Mr. Ilham Suleymanov, Mr. Jahid Jabizada

Invention Title:

M.R.S. - Mercy Rescue Snake

Invention Description:

M.R.S. (Mercy Rescue Snake) is a fiber-optic-controlled robotic system for post-earthquake search and rescue. Its flexible body navigates collapsed structures and soil to locate trapped survivors, then delivers life-sustaining water, nutrition and breathable air, extending survival time until rescue teams arrive, even where wireless signals fail.

Category:

Invention Title:

Cyclowareness

Invention Description:

Cyclowareness is a closed-loop cyber-resilience platform: it detonates real-world threats in a secure sandbox, leverages AI to convert each into targeted training for the specific at-risk employee, and quantifies behavioural change through a human-risk score—continuously learning, detecting, and neutralising threats.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: AZ - 9908****Inventor(s):**

Mr. Safarali Safarli

Invention Title:

Azercell Safe Environment Application

Invention Description:

A disaster-response platform that prepares employees to act both proactively and reactively in any emergency. Through the app, employees can complete crisis-readiness training, view real-time evacuation plans, and report hazards instantly.

BRAZIL

Instituto Nacional da Propriedade Industrial
National Institute of Industrial Property

INPI

Instituto Nacional
da Propriedade
Industrial

Official industrial
property office of Brazil

Brazil has the largest economy in Latin America and a broad industrial base that supports diverse innovation activity across manufacturing, agribusiness, energy, health, transport, chemicals, and digital services. Its intellectual property system is administered by the Instituto Nacional da Propriedade Industrial, which plays a central role in processing patents, trademarks, industrial designs, and other industrial property rights. Recent WIPO data show that Brazil remains one of the most active patent offices globally by filing volume, while resident-origin applications also indicate outward inventive activity by Brazilian applicants. Patenting in Brazil reflects a mixed ecosystem shaped by domestic firms, universities, research institutions, and small businesses. Technical activity is visible in fields such as special machinery, chemistry, medical technology, transport, and civil engineering. In this context, intellectual property remains an important policy and business tool for translating research, industrial capability, and applied innovation into protected assets.

Invention ID: BR - 5501

Inventor(s):

Marcos Landahl Cabral / Hidroflex

Invention Title:

Hydroflex Vehicle Consumption Reducer

Invention Description:

An Eco-Friendly System Using Hydrogen to Save Fuel and Cut Emissions. A Trunk-Installed Reactor Generates Hydrogen via Electrolysis. Controlled by an App via Bluetooth, It Injects Hydrogen into the Engine's TBI for Complete Combustion. It Delivers up to 30% Fuel Savings and Reduces Emissions by up to 80%.

Category:

P) Energy - Renewable and green energy

Invention ID: BR - 5502

Inventor(s):

Sol Andrea Gonzalez Tapia / Sentinela Vita Company

Invention Title:

Sentinela VITA - Intelligent Assisted Triage Surveillance

Invention Description:

Sentinela VITA Is an Explainable AI (XAI) Platform That Supports Risk Classification in Urgent and Emergency Care. The Solution Identifies Patients at Risk of Clinical Deterioration, Recommends Timely Re-Evaluations, and Assists Healthcare Professionals in Evidence-Based Decision-Making, Enhancing Patient Safety and Care Efficiency.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: BR - 5503

Inventor(s):

Vitor Gabriel Cagol Escobar and Irene Cecilia Cagol

Invention Title:

PIETRA - a social robot

Invention Description:

Humanoid Robot With Artificial Intelligence, Designed to Assist in the Treatment of Children With Autism and Depression, Offer Companionship to the Elderly in Nursing Homes, and Serve as a Medical Information Hub. It Also Assists in Customer Service at Tourist Spots, Hotel Chains, and Commercial Establishments.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: BR - 5504

Inventor(s):

Euclides Pereira Pardigno

Invention Title:

Agribusiness digital dependency and risk intelligence system

Invention Description:

An Agribusiness Digital Dependency and Risk Intelligence System That Maps Critical Technologies and Correlates Cyber, Legal, Operational, AI, and Third-Party Risks, Prioritizing Vulnerabilities and Generating Resilience and Risk-Treatment Actions.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: BR - 5505

Inventor(s):

Giovanna Vargas Barbosa, Luca Mascarenhas Plaster, Pedro Castro Viana

Invention Title:

Wemilk

Invention Description:

This is an intelligent, continuous monitoring platform for dairy cattle that uses computer vision and artificial intelligence. The system analyzes herd behavior in real time, identifies changes that may indicate disease or welfare issues, and sends alerts, supporting rapid decision-making and reducing production losses.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

Invention ID: BR - 5506

Inventor(s):

Anatalício dos Reis Silva

Invention Title:

Portable coffee sieve and winnower

Invention Description:

An Innovative Portable Coffee Sieve and Winnower Automates Grain Cleaning Directly in the Field. It Processes up to 420 kg per Hour, Replacing Grueling Manual Labor. The Compact Machine Eliminates Debris and Twigs Rapidly, Boosting Farm Productivity. It Protects Worker Health by Reducing Physical Strain and Optimizes the Post-Harvest Workflow.

Invention ID: CA - 101

Inventor(s):

Ahmad Karimi / Therma Tile Inc.

Invention Title:

ThermaTile Modular Snow-Melting System with Quick Connectors

Invention Description:

A modular Heated Tile snow-melting system comprising independently replaceable multi-layer heated concrete panels with embedded heating cables, plug-in electrical connectors, parallel power distribution, zoned control, and fault isolation to provide energy-efficient, reliable, and easy-to-maintain heated pavement infrastructure.

Category:

C) Construction / Civil Engineering / Materials

Invention ID: CA - 102

Inventor(s):

Xiaowen Shen, Xiang Yang, Kun Kang, Jingjing Bai, Jiajia He / Plantect

Invention Title:

Predictive, Sensor-Agnostic & Immersive Plant Health Intelligence

Invention Description:

Plantect is an AI-powered plant health platform that integrates with off-the-shelf IoT sensors to monitor soil, moisture, light, and environmental conditions in real time. It provides early disease detection, predictive analytics, and species-specific care recommendations through a mobile app, enabling smarter, proactive plant management for homes and commercial growers.

CHINA

China National Intellectual Property Administration

CNIPA

NATIONAL IP OFFICE

China National
Intellectual Property
Administration

China maintains one of the world's largest and most active intellectual property systems, supported by a broad industrial base, strong research capacity, and sustained investment in science and technology. Patent activity reflects both the scale of domestic innovation and the increasing international reach of Chinese applicants. The country's innovation landscape is shaped by advances in digital technologies, electronics, manufacturing, green energy, and applied engineering, alongside expanding commercialization channels linking research, industry, and markets. A large share of filings originates from residents, indicating the depth of local inventive activity and the strategic role of IP in business competition and technological upgrading. Through the China National Intellectual Property Administration, the patent system supports protection, disclosure, and diffusion of knowledge while reinforcing China's position in global innovation networks.

Inventor(s):

Rong Jiayu / Shanghai High School International Division

Invention Title:

Automated Diagnosis of Carpal Tunnel Syndrome Using AURAS-Net (Adaptive Ultrasound Reliable Assisted Segmentation Network)

Invention Description:

This project develops AURAS-Net, an adaptive and reliable ultrasound-assisted segmentation network for carpal tunnel syndrome diagnosis, aiming to accurately identify the median nerve in wrist ultrasound images. The model combines a dual-path CNN-ViT encoder, adaptive feature fusion, a hierarchical boundary-aware decoder, uncertainty modeling, and interactive prompt modulation, enabling it to capture local textures, global anatomical context, prediction reliability, and clinical controllability. Experiments on 180 real wrist ultrasound images show strong performance, achieving a Dice score of 0.8509 and an IoU of 0.7460, outperforming baseline models such as U-Net and DeepLabV3+. The project therefore offers a reliable technical solution for automated diagnosis of CTS and clinician-assisted interpretation.

**Invention ID: Youth Innovation Olympiad / CN - 8604****Inventor(s):**

Kang Juncheng / Shanghai Experimental School

Invention Title:

An Agricultural Decision-support Terminal Based on a Multimodal Large Language Model

Invention Description:

Addressing the common challenges faced by smallholder farmers worldwide, such as complex operation of smart devices and experience-dependent decision-making, this project develops an agricultural decision-support terminal based on a multimodal large language model. It establishes a collaborative "handheld terminal + agricultural IoT + cloud platform" system, calling a lightweight multimodal large language model to support voice, image, and touchscreen interactions. The project enables crop pest and disease identification (accuracy >90%), environmental monitoring, and remote irrigation control. Contributing to UN Sustainable Development Goals SDG 2 (Zero Hunger) and SDG 9 (Industry, Innovation and Infrastructure), this project provides a non-demanding, user-friendly and widely replicable Chinese solution to global digital agricultural transformation.

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

**Invention ID: Youth Innovation Olympiad / CN - 8605****Inventor(s):**

Liu Yingbo / WLSA Shanghai Academy

Invention Title:

Sense Walking 2.0

Invention Description:

Sence Walking 2.0 - An AI-powered smart guide belt based on walkable surface recognition is designed to help visually impaired individuals navigate safely and independently in complex environments. Traditional mobility aids for the visually impaired each have clear limitations. Many existing smart assistive devices attempt to improve on these tools, but most remain reactive. They focus on obstacle detection, offer limited guidance, or suffer from high costs, short battery life, and poor real-world usability. Sense Walking 2.0 introduces a different approach. Using a camera and on-device AI, it recognizes walkable surfaces and actively plans safe paths in real time. Even when tactile paving is blocked or sidewalks are cluttered, the system guides users around obstacles instead of simply warning them. All processing runs offline, making it fast, reliable, and privacy-friendly. Our goal is to turn mobility assistance into intelligent guidance and improve independence for over 200 million visually impaired individuals worldwide.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: Youth Innovation Olympiad / CN - 8606****Inventor(s):**

Cheng Yu Qian Michelle / Shanghai High School International Division

Invention Title:

Progressive intelligent wake-up pillow based on bone conduction technology

Invention Description:

This project solves common troubles of students and office workers: insufficient sleep, cardiovascular strain from blaring conventional alarms and noise nuisance to others.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

**Invention ID: Youth Innovation Olympiad / CN - 8607****Inventor(s):**

Hu Yucheng Aaron / Shanghai High School International Division

Invention Title:

Emergency Parking Automatic Sign Based on Miuro Origami Structure and Open-Source Hardware

Invention Description:

This device utilizes an automated emergency parking warning system that combines a light indicator panel based on the Miura origami structure with a remote-controlled car powered by Arduino open-source hardware. The solution is designed to achieve rapid folding and unfolding of the indicator panel through origami mechanics, and enable remote operation via intelligent control, thereby improving the efficiency and safety of emergency parking warnings.

30

SVIIF-2026

**Invention ID: Youth Innovation Olympiad / CN - 8608****Inventor(s):**

Raymond R X Zhang / The British International School Shanghai, Puxi

Invention Title:

Intelligent Tactile Paving Sign System Based on RFID Technology

Invention Description:

This project designs an intelligent tactile paving sign system based on RFID technology to address the travel challenges faced by visually impaired individuals, including insufficient tactile paving information, lack of positioning, and difficulty in emergency assistance. The system consists of tactile paving tiles embedded with RFID tags and a smart cane equipped with an ESP32 module, a voice module, and a posture sensor, which enables location announcement, route guidance, and automatic fall alarm. Tests show that the tag recognition accuracy is 99.2%, the response time is less than 1 second, and the fall detection sensitivity is 100%. The project provides visually impaired users with all-round travel support covering navigation, positioning, and protection, significantly enhancing their travel safety and convenience.

Category:

E) Security - Rescue - Alarm

**Invention ID: Youth Innovation Olympiad / CN - 8609****Inventor(s):**

Chen Kewei / Dulwich College Shanghai, Pudong

Invention Title:

Intelligent feeding system for dogs

Invention Description:

The core idea of this system is to scientifically feed dogs based on their exercise levels, allowing owners to take care of their dogs more easily and scientifically. The corrugated paper used at the beginning of the project was found to be easily bitten by small dogs. After iterative upgrades, a drum feeding machine was designed to provide more stable feeding. Additionally, 3D printing of small dog rice bowls. Add a digital shake sensor to record the movement and steps of the puppy, and use a blank board as the control center of the system. In terms of software and data, we use AI to research and analyze the dietary habits and appetite of different breeds of puppies, making feeding plans more technological and personalized.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

**Invention ID: Youth Innovation Olympiad / CN - 8610****Inventor(s):**

Cai Xinyu / Shanghai Shangde Experimental School

Invention Title:

Intelligent anti-seat reclining reminder device

Invention Description:

Addressing the safety hazard of falls caused by tipping chairs in daily life, this project has designed a low-cost, high-reliability smart warning chair. The system uses an Arduino Nano main control board as its core, combined with a JY60 sensor to monitor the chair's tilt angle in real-time. When a slight rearward tilt is detected, it immediately triggers a vibration module to alert the user, and when a severe rearward tilt is detected, it activates a buzzer alarm to warn the user, thereby preventing accidents. The innovative aspect lies in the integration of an electronic warning module with furniture, achieving rapid response, easy installation, and wide applicability. This design is particularly suitable for use by children and the elderly, enhancing safety and providing new ideas for intelligent protection in modern furniture.

Category:

E) Security - Rescue - Alarm

**Invention ID: Youth Innovation Olympiad / CN - 8611****Inventor(s):**

Zipser Paul Andreas / Wellington College International Shanghai

Invention Title:

Clear Plate & Sprout Growth - Multimodal AI Low-Carbon Incentive System for Food Saving

Invention Description:

This project constructs a recognition-feedback-incentive closed-loop system tailored for the campus food-saving and plate-clearing campaign. It adopts large AI models for image perception to deliver precise quantitative scoring (rated from 1 to 10) of food leftovers on dining plates. A weight sensing module conducts synchronous calibration, forming a dual-verification

31

SVIIF-2026

closed loop. The scoring data is linked to the visualized growth of virtual seedlings, which converts plate-clearing behaviors into tangible carbon emission reduction data. With a lightweight design perfectly adapted to campus canteen scenarios, the system features outstanding technological innovation and profound educational guiding value.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: Youth Innovation Olympiad / CN - 8612

Inventor(s):

Henry Wu / Hangzhou Xuejun Elementary School Qiuzhi Campus

Invention Title:

A Dynamic Tympanic Pressure Regulation and Protection System for Ambient Pressure Gradient Environments

Invention Description:

This project presents a dynamic tympanic protection system for ambient pressure gradient environments. In aviation, a closed-loop feedback system using pressure sensing and solenoid valves enables dynamic regulation of external ear pressure differentials. For underwater scenarios, a non-invasive air-buffer structure reduces the rate of pressure transmission without sealing the ear canal. By integrating active control and passive buffering, the system provides a cross-media pressure differential management solution with enhanced safety, engineering innovation, and broad application potential.

Liu Haolin, Ming Junyi, Xuan Xiwen, Ye Chun Yuk, Yan Zihan, Zhang Haoxuan / Shenzhen RDF International School

Invention Title:

Underwater Garbage Cleaning Robot

Invention Description:

This project applies distributed architecture and scheduling algorithms to realize efficient multi-robot collaborative intelligent water cleaning at low cost.

Category:

B) Electronics - Electricity - Methods of Communication

Invention ID: Youth Innovation Olympiad / CN - 8618

Inventor(s):

Chen Jiaming / Veritas Collegiate Academy

Invention Title:

Multi-point Multi-person Continuous Operation High-rise Rescue Drone

Invention Description:

Multi-point, Multi-person, continuous operation high-rise rescue drone. It uses extendable levers to deploy long-range escape bags at the windows or balconies of high-rise buildings. The multi-stage damping structure inside the bag enables personnel to slide down safely at a controlled speed, allowing uninterrupted continuous rescue with no upper limit on the number of people. This solves the technical problems of traditional high-rise rescue drones, such as single-person, single-use rescue, low efficiency, non-reusable equipment, and poor sliding safety. It can be widely used for high-altitude emergency rescue in disasters such as high-rise building fires, earthquakes, and collapses.

Category:

E) Security - Rescue - Alarm

Invention ID: Youth Innovation Olympiad / CN - 8619

Inventor(s):

Zichen Wang, Che Li, Yunqi Huang / Veritas Collegiate Academy Shenzhen Campus, Tsinglan School, Mounds Park Academy

Invention Title:

Public Transportation Drone System

Invention Description:

This fixed-route public transportation drone system connects key urban points through 3D air routes. With automated battery-swap main stations and sub-stations for boarding, each drone carries 12-14 passengers, reducing travel time, easing congestion, and supporting future low-carbon urban mobility.

Category:

Invention Title:

LLM-Guided Cybersecurity Alerts Intelligent Closed-Loop Defense

Invention Description:

This project revolutionizes power industry cybersecurity via an autonomous "AI-on-Duty" system. Addressing alert fatigue and slow responses, it integrates three breakthroughs: an "Alert Drift Degree" engine achieving 95% noise reduction and threat detection accuracy, a multi-agent architecture for rule-free attack chain reconstruction (cutting response time to 30 seconds) by the "Collaborative Analysis Bus", and natural language-guided threat hunting. Validated by four patents, two EI-indexed conferences and awards from businesses and sectors, this project leads the global strategic deployment of "AI+" in power information network protection. It has been deployed across 18 major provincial and regional power operation companies internationally, benefiting hundreds of millions of users and generating approximately 80 million US dollars in annual profits.

Invention Title:

Bucket Wheel Excavator Applicable to Mining Relatively Hard Materials

Invention Description:

This bucket-wheel excavator is suitable for excavating hard materials in open-pit mines and can work with trucks or belt conveyors for material transportation.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

Invention ID: CN - 8624

Inventor(s):

Jinlong He / Sichuan University

Invention Title:

Novel Polymer Membrane Technologies and Applications in Ultrasensitive Transmembrane Transport

Invention Description:

This project develops pore-wall-friction-engineered polymer membranes to enlarge pores, tune wall friction, create differential water/solute resistance, and decouple permeability from selectivity.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

Invention ID: CN - 8625

Inventor(s):

Yong Zhang, Zhilong Zhang, Yunjie Lu / Shanghai Superhigh Environmental Technology Co., Ltd.

Invention Title:

Composite Materials with Wave Absorption or Scattering Characteristics and Their Preparation Methods

Invention Description:

This project stands at the forefront of new materials, pioneering a "plasma polarization + electric field induction" process that solves the industry-wide challenge of poor dispersion and orientation of rare earths/carbon nanotubes within the matrix. Through precise microstructural control, we have developed a lightweight composite material featuring both high-efficiency wave absorption and geometric scattering properties. Testing confirms excellent performance with a reflection loss of up to -14.1 dB across the ultra-wide 6-40 GHz frequency band. The technology is ready for continuous production, promising to significantly reduce costs for high-end stealth equipment and 5G base stations while breaking the foreign monopoly. With the rise of the low-altitude economy and 6G communications, the market potential is vast.

Invention Title:

Extraterrestrial Ultrasonic Drilling and In-situ Sampling System

Invention Description:

This project independently develops an ultrasonic drilling and sampling system for extraterrestrial bodies.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8628****Inventor(s):**

Ni Yang, Wei Jin, Zheng Hao / Architecture Design & Research Institute, South China University of Technology Co., Ltd.

Invention Title:

AI-Assisted Design System for Wind-Thermal Dual-Driven Ventilation Shaft Cavities

Invention Description:

Under dual-carbon goals, this AI system uses CFD and deep learning to predict wind-thermal conditions and optimize ventilation shaft cavities for low-energy buildings

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8629****Inventor(s):**

Wenjun Yi, Tianhong Xiong, Jun Liu, Qi Wang, Xinyu Zhong, Weitao Yi / NJUST / Nanjing University of Science and Technology

Invention Title:

Collaborative Air-Ground Obstacle Avoidance Navigation in Complex Environments

Invention Description:

The project through collaborative sensing between UAVs and UGVs, the algorithm enables UGVs to achieve path planning and autonomous obstacle avoidance in GPS-denied environments.

Category:

B) Electronics - Electricity - Methods of Communication

**Invention ID: CN - 8630****Inventor(s):**

Ye Zhengfang, Zhao Quanlin, Liu Guohua, Zhou Lincheng, Lu Xinyue, Jiang Zhe, Li Zhi / Peking University

Invention Title:

Novel Immobilized Microbial Technology for Treatment of High-Nitrogen Organic Wastewater

Invention Description:

The first synthesis of macroporous reticular bioactive polymer carriers and efficient nitrate-degrading microorganisms for the green management of water pollution.

Category:

P) Energy - Renewable and green energy

**Invention ID: CN - 8631****Inventor(s):**

Chen Yongbing, Li Sidan, Zhang Qian, Zhang Bingdong, Xing Guirong / Beijing Shijitan Hospital, Capital Medical University, China Science Huachen Innovatech Co., Ltd.

Invention Title:

Laparoscopic Surgical Robot with Microwave Scalpel and Embodied Intelligent

Invention Description:

Can only propagate linearly, losing the flexibility advantage of the robot's articulated wrist. To address these limitations, we have developed a microwave platform and an embodied

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: CN - 8632****Inventor(s):**

Gao Shuo, Wang Zihao, Li Wei, Pan Yu, Wang Zhaoqing / Beihang University; Capital Medical University, Tsinghua University, Beijing Tsinghua Changgung Hospital

Invention Title:

FlexSense: A Flexible-Sensing-Enabled System for Dynamic Human Health Data Acquisition and Intelligent Analysis

Invention Description:

A full-chain digital medical solution featuring bionic sensing, dynamic calibration, layout optimization and intelligent decision-making.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: CN - 8633****Inventor(s):**

Chi Wu, Liyuan Gao, Enze Han, Ruogu Wu, Chenzhe Hang, Mingxing Wang, Yingzhe Jia / Southern Marine Science and Engineering Guangdong Laboratory (Guangzhou)

Invention Title:

Full-Ocean-Depth Environmental Simulation and Metrology Calibration System

Invention Description:

The invention is the world's first full-ocean-depth environmental simulator and metrological calibration system for testing ocean sensors from sea surface to Mariana Trench.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8634****Inventor(s):**

Junnian Wang, Changyang Guan, Chunlin Zhang, Zhe Liu, Bin Yang, Nana Sun / Jilin University

Invention Title:

Centralized Electric Torque Vectoring Drive System

Invention Description:

E-TVDS (Centralized Electric Torque Vectoring Drive System): innovative drive system for high-end electric vehicles with fast, precise, full-range active torque distribution.

Category:

J) Traffic - Transport - Car Accessories

**Invention ID: CN - 8635****Inventor(s):**

Yongchong Chen, Hao Liu, Yingyuan He, Caimei Feng, Bin Zhang, Cheng Liang, Peiyuan Zhou / Sichuan Energy Internet Research Institute, Tsinghua University - HAWAGA Energy Storage Technology (Chengdu) Co., Ltd

Invention Title:

Intrinsically Safe Semi-Open Battery and Energy Storage System

Invention Description:

The semi-open battery integrates safety and regeneration systems, offering intrinsic safety, extended lifespan, and green recyclability

Category:

P) Energy - Renewable and green energy

WELCOME TO CHINA IEI 2026

12th International Exhibition of Inventions

Guangzhou – China

Dates: August 21–23, 2026

Venue: Guangzhou, China

 China Association of Inventions
 int@cainet.org.cn

Invention ID: CN - 8636

Inventor(s):

Xiaochun Zhang, Tao Lin, Xing Liu, Gong Cheng, Lijian Zhuang, Weiqun Zhuang, Junyuan Li / Shenzhen Urban Transport Planning Center Co., Ltd. / Shenzhen Institute for Advanced Study, UESTC

Invention Title:

Key Technologies for Digital Twin Simulation of Urban Multimodal Transportation Systems

Invention Description:

Fusing multi-source data for traffic behavior identification & complex flow simulation, with 91% behavior mapping, 85% flow & situation prediction accuracy & 5s 1h-event inference.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: CN - 8637

Inventor(s):

Xinping Wang, Shumin Yang, Jianbo Guo, Yu Wang, Shirong Guo, Chenglin Lü, Yang Gu, Yachao An, Lei Yang, Lei Zhou, Tengwu Qi / China Railway 22nd Bureau Group Co., Ltd.

Invention Title:

Rectangular Steel Sleeve Construction Method for Station Crossing and Reception of Pipe Jacking Equipment

Invention Description:

Developed rectangular steel sleeve pipe jacking technology solving traditional excavation pain points, internationally leading, with wide applications and outstanding benefits.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

Invention ID: CN - 8638

Inventor(s):

Zhongkai Yi, Haojie Yang, Ying Xu, Zhenghong Tu, Xiaohe Ran, Jinmeng Zhang, Han Gao / Harbin Institute of Technology

Invention Title:

Efficient Control and Operation System for Virtual Power Plants with Massive Distributed Flexible Resources

Invention Description:

It solves key bottlenecks of massive distributed flexible resources in new-type power systems, develops a high-efficiency VPP control system and an integrated operation platform.

Category:

B) Electronics - Electricity - Methods of Communication

Invention ID: CN - 8639

Inventor(s):

Ji Han, Fang He, Yingyu Tan, Lei Jiao, Jinrui Han, Minmin Zhang, Qinfeng Li / Coolkind Technology Co., Ltd.; Zhejiang University

Invention Title:

Long-reach Integrated Vessel for Salvage, Separation and Dewatering of Cyanobacteria

Invention Description:

5G cloud-controlled 30m long-arm enclosing compression all-electric cyanobacteria cleaner with multi-source fusion, auto obstacle avoidance, 311.2t/h separation & 96.7% removal.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8640****Inventor(s):**

Yu Guangbin, Li Changshan Daibing, Shen Aihua / Harbin Institute of Technology

Invention Title:

Intelligent Large-Scale Ice Sculpture Automated Building Robot

Invention Description:

The robot has achieved full automation of ice sculpture construction, ensuring millimeter-level precision while drastically improving efficiency and safety in extreme cold.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8641****Inventor(s):**

Chengwei Fei, Bowei Wang, Peng Ren, Xiangjun Fang, Ying Han, Shupeng Fang / Fudan University

Invention Title:

Multi-stage brush seal structure and key technologies with adjustable final stage pressure drop

Invention Description:

This project developed an active intelligent pressure relief control system and a combined brush seal structure, improving the efficiency and reliability of turbomachinery.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8642****Inventor(s):**

Gao Lu, Yu Guoxia, Chen Zhiyu, Lei Yi, Wang Qing, Sun Zhipeng, Lv Sicheng / Beijing Children's Hospital, Capital Medical University

Invention Title:

A Sobel Operator-Based Method and System for Midpalatal Suture Image Reconstruction

Invention Description:

A Sobel-based midpalatal suture reconstruction via CBCT texture & CNN achieves precise assessment (AUC 0.91), guiding treatment timing, preventing facial/systemic issues.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: CN - 8643****Inventor(s):**

Zhiwei Mao, Wei Zhang, Shufeng Wang, Wenjun Li, Lixu Liu / Nanchang University, Make Creation (Beijing) Technology Co., Ltd.

Invention Title:

Nested elastic element driven hand rehabilitation exoskeleton robot

Invention Description:

We proposed a novel nested elastic actuation mechanism and developed a lightweight (840 g), 10-DOF hand exoskeleton robot that offers ease of wear and broad size compatibility.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: CN - 8644****Inventor(s):**

Zhenhao Xi, Ling Zhao, Xiaoyi Qiu, Jie Jiang, Jinjin Li, Huan Huang, Xuesong Wang, Zhaoqi Cui, Xincheng Zhang / East China University of Science and Technology

Invention Title:

Industrial Application of Large-Scale, High-Efficiency Polymer Purification Technology and Complete Equipment

Invention Description:

Based on the proprietary physical property database, high-efficiency devolatilization technology and devolatilization equipment were developed for efficient polymer purification.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8645****Inventor(s):**

Wu Ziyin, Zhou Jieqiong, Zhao Dineng, Wang Mingwei, Zhang Yunfei, Yao Bin / Second Institute of Oceanography, MNR, China

Invention Title:

AUVIS: Autonomous Uncrewed Vessel System for Intelligent Seafloor Mapping

Invention Description:

Oriented toward intelligent seafloor mapping, this project developed a modular autonomous vessel system with clustered operation, now used in 30+ countries and regions.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

**Invention ID: CN - 8646****Inventor(s):**

Meiyun Wang, Dinggang Shen, Yaping Wu, Yan Bai, Wei Wei, Lingzhi Hu, Tuoyu Cao, Jianmin Yuan / Henan Provincial People's Hospital

Invention Title:

Systems and Methods for Correlating Medical Images with Medical Reports

Invention Description:

This invention presents a universal image-text alignment method for brain MRI to realize efficient matching between multi-sequence images and clinical reports.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: CN - 8647****Inventor(s):**

Xing Jin, Yonglong Lu, Zhiyong Guo, Weiming Zhang, Jiawei Wen, Huasen Liu, Wenkai Zhu / China Railway 16th Bureau Group Co., Ltd., China Railway 16th Bureau Group First Engineering Co., Ltd.

Invention Title:

Key Technologies for Safe Construction of Highway Tunnels with High-Concentration Gas and Hydrogen Sulfide Mixed Gas in High-Altitude Areas

Invention Description:

By revealing migration laws and developing technologies such as blasting plugging, grouting anti-seepage and intelligent ventilation, precise control of harmful gases is achieved.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8648****Inventor(s):**

Zhang Qiangyong, Li Shucui, Duan Kang, Wang Hanpeng, Xiong Qingrong, Wang Pengfei, Lin Hanxiang, Chen Changpeng, Zhang Ruixin, Zhao Yu / Shandong University

Invention Title:

Large-Scale Intelligent Numerical Control Model Test System for Simulating Catastrophic Evolution of Deep Underground Engineering

Invention Description:

This project has developed a large-scale intelligent numerical control model test system for simulating catastrophic evolution of deep engineering under complex conditions.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8649****Inventor(s):**

Nan Ma, Yajue Yang, Genbao Xu, Zhixuan Wu, Ye Liang, Yiheng Han / Beijing University of Technology

Invention Title:

Embodied AI-Driven Human-Vehicle Interaction for Autonomous Driving

Invention Description:

The project builds autonomous driving embodied intelligence with human-like intent understanding and precise interaction, achieving large-scale open urban operations.

Category:

B) Electronics - Electricity - Methods of Communication

**Invention ID: CN - 8650****Inventor(s):**

Yang Fan, Xia Yi, Wu Jiacheng, Wang Lihua, Chen Tingrui, Zhang Wenyu, Wang Peng, Li Puhao / Tongji University

Invention Title:

Reconfigurable Lightweight Lattice Materials with Multifunctionality and Their Applications

Invention Description:

Lightweight and efficient utilization of materials is achieved by integrating multi-stable characters into lattice materials through tension structure and rotational array design.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8651****Inventor(s):**

Zhu Jiahui, Wei Defu, Ding Kaizhong, Chen Panpan, Dong Yujun, Zheng Nan / China Electric Power Research Institute Ltd.

Invention Title:

Magneto-biased High-Temperature Superconducting Fault Current Limiter and it's Long-Term Demonstration at a 66 kV Substation

Invention Description:

This project develops a novel magneto-biased superconducting current limiting technology, marked its grid-connected operation for the first time in China.

Category:

B) Electronics - Electricity - Methods of Communication

**Invention ID: CN - 8652****Inventor(s):**

Guoquan Lu / Zhongzhou Energy Conservation Technology Co., Ltd.

Invention Title:

Distributed Waste Pyrolysis Cold Emission Energy Station

Invention Description:

"Distributed waste pyrolysis cold emission energy station" is to convert domestic waste and general combustible industrial waste (organic solid waste) into energy.

Category:

P) Energy - Renewable and green energy

**Invention ID: CN - 8653****Inventor(s):**

Kai Yang, Xuhui Ding, Zhen Chen, Gaoyang Li, Jiaxuan Li / Beijing Institute of Technology

Invention Title:

Ultra-Low Power, Ultra-Reliable: The Analog Probability Processing Chip for Next-Gen IoT

Invention Description:

An ultra-low-power analog probability processing chip for next-gen IoT, enabling reliable probabilistic signal processing, saving bandwidth, and lowering receiver power.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: CN - 8654****Inventor(s):**

Qiang Gao, Jianzhang Li, Lixin Bu, Hongwei Bu / Beijing Forestry University

Invention Title:

A Formaldehyde-Free Plant Protein Adhesive as well as Production and Application of Its Engineered Wood Panel Products

Invention Description:

The novel protein molecular adhesion strategy yields waterproof, mildewproof and cost-effective outcomes and formaldehyde-free plant protein adhesive and wood-based panel products.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: CN - 8655****Inventor(s):**

Kai Liu, Zhizhen Du, Linwu Wang, Wenfu Wei, Bo Gao, Zefeng Yang, Ruifan Xu / Southwest Jiaotong University

Invention Title:

Digital Twin Intelligent Operation and Maintenance Method for Electrical Equipment

Invention Description:

Digital twins collect electrothermal data, temperature curves and anomaly infrared images to improve detection, reduce faults and ensure train safety.

Category:

J) Traffic - Transport - Car Accessories

Invention ID: CN - 8656

Inventor(s):

Zhaofeng Dong, Xuanming Wei, Jinfang Yang, Qunqun Hao, Chenyao Li / Shaanxi Guantu Biotechnology Co., Ltd

Invention Title:

Development and Application of Recombinant Type I&III Fusion Collagen with Low Immunogenicity Based on Stabilization Strategies

Invention Description:

Synbio type I&III collagen. Tag-free, G-X-Y optimized. 121°C stable, 99% purity, 4°C/12mo. 10x stability. Low immunogenicity, endotoxin <0.05 EU/mg. Aesthetics, repair, anti-aging.

Category:

Invention ID: CN - 8657

Inventor(s):

Shuai Song, Feiyang Pan, Yuchao Wang, Jianan Qin, Jingya Zhang / Jiangsu FTCM Life Science & Technology Development Co., Ltd

Invention Title:

Application of Fermented Ginseng Technology in Nourishing Kidneys, Tonifying Yang, and Enhancing Qi to Combat Fatigue - Probiotic Fermentation Technology Promotes the Modernization of Traditional Chinese Medicine

Invention Description:

Ginseng causes "heatiness" & low bioavailability. We solved this with patented fermentation & zebrafish screening.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: CN - 8658

Inventor(s):

Gao Xiang, Ding Hongqiang, Ma Yuanyuan, Cui Zhiwei, Zhang Liting, Ma Wenjun, Liu Yan, Liu Yafan, Gao Feng / Hebei Water Conservancy Engineering Bureau Group Limited; Hebei Water Conservancy Research Institute; Shijiazhuang Railway University

Invention Title:

Water Supply Pipe Network Collaborative Efficiency-enhancing Hydropower System and Intelligent Regulation Method

Invention Description:

Develop synergistic high-efficiency hydropower system and intelligent control for pressurized pipelines to efficiently recycle surplus hydraulic energy from water supply networks

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

Invention ID: CN - 8659

Inventor(s):

Nie Minglong, Chen Ruiyin, Yu Taiji / Liaoning Technical University, Research Institute of Petroleum Exploration and Development

Invention Title:

Technology for Quantitative Evaluation of Hydrocarbon Generation and Expulsion and Sweet-Spot Identification in Oil Shale

Invention Description:

The integrated technical framework consists of four interrelated modules. The technology demonstrates significant practical value for shale oil resource assessment.

Category:

P) Energy - Renewable and green energy

Invention ID: CN - 8660

Inventor(s):

Shuo Qiao, Feng Shi / National University of Defense Technology

Invention Title:

Apparatus and Method for Reactive Ion Beam Etching of Micro-nano Structures on High-precision Optical Components

Invention Description:

High-precision Reactive Ion Beam Etching system developed. 3D micro-nano structures, 10 to the minus 5 reflectance, 1.5x LIDT boost. Revolutionizes high-energy laser optics.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

Invention ID: CN - 8661

Inventor(s):

Han Rongjie, Fang Xiang, Ding Jian, Fan Libo, Wang Yi, Tu Yongwei, Gao Yufeng, Song Jia, Wang Qifeng, Su Liangzhi, Wu Weihua, Jiang Jian, Long Lijuan, Hu Zheqian, Dong Dachu, Zhou Yuhan / State Grid Hangzhou Power Supply Company

Invention Title:

GridPulse AI: Power Grid Artificial Intelligence Condition Diagnosis & Active Operation and Maintenance System

Invention Description:

GridPulse AI innovatively integrates traditional Chinese pulse diagnosis wisdom with advanced power digital technologies. Featuring integrated on-site perception, multi-source data analysis and holistic risk decision-making, it overcomes technical bottlenecks of traditional power grid operation and maintenance. Supported by embodied intelligent devices and super intelligent computing infrastructure, the system realizes full-process intelligent pulse diagnosis for power grid operation, accurately detecting hidden risks and forecasting potential faults in advance. With remarkable pilot effects, it improves maintenance efficiency, reduces costs and strengthens grid security. As a replicable digital transformation solution adaptable to all transmission, distribution and power supply scenarios, it boasts strong implementation and commercial value, providing vital technical support for global energy security and low-carbon sustainable development.

OFFICE OF
THE REPUBLIC
OF CROATIA

DZIV

ABBREVIATION

State Intellectual Property Office of the Republic of Croatia

Croatia has a dynamic and open **innovation ecosystem** supported by a skilled workforce, a strong scientific base, and **increasing investment in research** and development. The country's strategic position within the European Union enhances **collaboration, technology transfer, and access to wider markets**. Intellectual property plays a key role in supporting innovation, attracting investment, and fostering the commercialization of new technologies. Through a modern and efficient IP system, Croatia continues to strengthen its patent landscape and integration into global innovation networks, contributing to sustainable economic growth and technological advancement.

DEMOCRATIC REPUBLIC OF THE CONGO

Directorate of Industrial Property
Direction de la Propriété Industrielle

Directorate of Industrial Property

Direction de la Propriété
Industrielle

National industrial property
office of the Democratic
Republic of the Congo

The Democratic Republic of the Congo has a large resource base, a rapidly growing population, and long-term innovation potential linked to mining, energy, agriculture, services, and emerging digital activity. Its formal intellectual property system is centered in Kinshasa through the Directorate of Industrial Property, while WIPO data indicate that reported patent activity remains modest by international standards. This pattern suggests that the country is still at an early stage of patent-system depth, with significant room for stronger research commercialization, institutional capacity, technology transfer, and innovation support for enterprises and inventors. Intellectual property can play an important role in helping transform scientific, technical, and industrial ideas into protected assets, especially in resource processing, agriculture, public-health solutions, infrastructure-related technologies, and small-scale manufacturing. The country's scale, strategic location, hydropower and mineral endowments, and youthful demographics provide a foundation for future innovation-led development, provided that market linkages, investment, skills, and administrative capability continue to strengthen.

HONG KONG SAR, CHINA

Special Administrative Region of China

IPD

Intellectual
Property
Department

Government of the Hong Kong
Special Administrative Region

Hong Kong SAR maintains a highly internationalized, service-oriented economy with deep links to global trade, finance, logistics, and innovation networks. Its patent system serves both local and non-resident applicants, reflecting Hong Kong's role as an internationally connected business and IP jurisdiction.

Resident-origin patenting is comparatively modest in absolute scale but internationally outward-looking, with strong use of overseas patent systems to support global market strategies.

Leading technical fields among resident patent applications include electrical machinery, computer technology, digital communication, and pharmaceuticals—areas aligned with Hong Kong's innovation strengths and its position in regional and global value chains.

Invention Title:

CWrite: An AI-Assisted Platform for Young Writers to Think, Create, and Grow

Invention Description:

CWrite redefines AI as a thinking partner, not a shortcut. Designed for primary ESL/EFL students, it uses a patented graph-based narrative system with gated progression to enable structured, traceable, and values-driven human-AI co-creation through CEFR-aligned diagnostics, adaptive scaffolding, and multimodal storytelling.

Category:

O) Teaching Research - Pedagogical Items

Invention ID: HK - 85202

Inventor(s):

Dr. Cheng Jinping, Mr. Liu Jingyu

Invention Title:

BioSentinel Passive eDNA/eRNA Enrichment and Sampling System

Invention Description:

A portable, flexibly deployable passive eDNA/eRNA enrichment and sampling system enables remote, simultaneous multi-sample collection across large areas, saving 90% time and 75% cost. Integrated with an in-house eDNA reference database, it supports cost-effective, high-throughput, non-destructive detection of biota, enabling timely management actions.

Category:

G) Commercial, Industrial and Office Equipment

Invention ID: HK - 85203

Inventor(s):

Dr. Tsang Yiu Fai, Ms. Xu Hui, Mr. Adigun Basit Akolade, Ms. Chan Yu Ki

Invention Title:

From Sludge to Structure: Transforming Waterworks and Sewage Sludge into Sustainable Concrete

Invention Description:

Sludge-transformed concrete is a ready-to-deploy solution for sewage and waterworks sludge disposal. Replacing 10-25% of conventional aggregate, it achieves 20-48 MPa strength for structural and non-structural use. Through a simple pre-treatment process, it cuts production costs by 32%, reduces odour and CO₂ emissions, achieving carbon neutrality.

Invention Title:

RoMetric: Intelligent Hand Function ROM Assessment System

Invention Description:

RoMetric is a patented computer vision system for automatic assessment of hand joint range of motion, a critical indicator of hand function. It quantifies 3D goniometry across 15 active joints (20 DOFs) using a standardised 7-pose protocol, offering precise, non-invasive measurement and rehabilitation guidance, reducing assessment time by up to 87%

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: HK - 85205

Inventor(s):

Dr. Mung Wai Yin, Steve; Mr. Lai Chun Yin, Woody; Dr. He Zebang

Invention Title:

AI-Steered Wireless Circuit Design for Next-Generation 6G and Satellite Transmitters

Invention Description:

This invention uses deep neural network to precisely predict key linearity metrics in power amplifiers to get load-pull data. It cuts test time by >70% and reduces lab costs versus traditional methods, then automatically generates 3GPP compliant, low current matching networks to accelerate 6G & satellite system design across devices and bandwidths.

Invention Title:

Intelligent Blueberry Harvesting Robot

Invention Description:

The Intelligent Blueberry Harvesting Robot is an AI-driven agricultural robot designed to automate the delicate and labor-intensive process of blueberry harvesting. Blueberries are small, fragile, and often grow in dense clusters, making manual picking slow, costly, and highly dependent on seasonal labor. This invention addresses these challenges by integrating advanced mobility, machine vision, robotic manipulation, and soft gripping technologies into one intelligent harvesting system. The robot uses a quadruped, robot-dog-based mobile platform, allowing it to move flexibly through farm environments, including uneven ground and narrow spaces between blueberry plants. Mounted on the platform are two robotic arms that can approach fruit from different angles and perform efficient picking operations. Through AI vision, the system detects mature blueberries and distinguishes them from unripe fruit, leaves, branches, and background objects. It then analyzes the optimal grasping pose for each target berry or cluster. To protect fruit quality, the robot is equipped with soft grippers that gently hold and detach blueberries without bruising or damaging them. The dual-arm design improves harvesting speed and operational flexibility, while the perception and motion planning system enables accurate, repeatable, and intelligent picking. This invention can help farms reduce dependence on seasonal manual labor, improve harvesting consistency, and support the transition toward smart and automated agriculture. By combining AI detection, mobile robotics, dual-arm manipulation, and soft harvesting technology, the Intelligent Blueberry Harvesting Robot provides a practical solution for high-value fruit production and represents a meaningful step toward the future of agricultural automation.

High-Power, High-Reliability Diesel Generator Sets for Data Centers

Invention Description:

Based on the core requirements of data centers for high power output, high reliability, rapid startup, and fast response capability, the project establish an power assurance system: A rapid and stable large-space combustion technology was pioneered, together with the development of an annular stratified combustion system; An active anti-disturbance injection control technology was invented, along with a high-response resonant turbocharging air system; an innovative full-time-domain engine lubrication technology was adopted; A millisecond-level flywheel energy storage control technology with adaptive load fluctuation capability was applied; A primary-backup dual-redundant starter architecture was adopted. A full product lineup including the M33, M55, and M61 series has been developed. The products have been widely deployed by domestic and international high-end markets, delivering strong economic and social benefits.

ISIPO

Official IP office of
Iceland

Reykjavik

Icelandic Intellectual Property Office

Iceland's intellectual property landscape reflects the structure of a small, high income, and internationally connected economy. Patent activity at the national office is modest in absolute terms, yet resident origin filings worldwide show that Iceland's innovators frequently seek protection beyond the domestic market. This outward orientation aligns with the country's specialized export profile and knowledge intensive businesses. Recent WIPO data show resident patenting concentrated in medical technology, other special machines, measurement, pharmaceuticals, and IT methods for management. Iceland's innovation environment also benefits from strong digital adoption, a highly educated population, and an energy system centered on renewable resources such as geothermal and hydropower.

The Icelandic Intellectual Property Office supports protection, commercialization, and long term competitiveness through the effective administration of intellectual property rights.

Invention Title:

GeoStep® Technology, a sustainable geothermal mineral recovery technology

Invention Description:

GeoStep® is a pioneering Icelandic clean technology that unlocks the potential of geothermal resources by recovering valuable natural minerals from geothermal water streams. Traditionally, mineral rich geothermal water has been viewed as a challenging byproduct of geothermal energy production. GeoStep® transforms this resource into high value natural ingredients through a sustainable extraction and processing method. The technology enables the recovery of high purity natural silica while supporting circular economy principles, reducing resource waste and creating new value from renewable geothermal energy systems. GeoStep® combines geothermal engineering, mineral science and sustainable innovation to create a new pathway for clean mineral production from geothermal resources.

Invention ID: IS - 3509

Inventor(s):

Margret Juliana Sigurdardottir

Invention Title:

Mussila / Moombix

Invention Description:

Mussila is an award-winning music learning app that teaches children to read and play music through playful practice at an early age. It guides kids step by step through music theory, piano fundamentals, rhythm and ear training with game-based challenges that have been shown to help them learn significantly faster than traditional methods. Available in over 30 languages and used in classrooms and homes worldwide, Mussila offers children aged 5-10 a fun, gender-neutral and violence-free path into lifelong musical understanding. Moombix is an all-in-one online music education platform that connects adult learners with expert music teachers for live, interactive lessons. Built on a hybrid model that combines real-time one-to-one teaching with structured music courses and a practice-supporting learning platform, Moombix makes high-quality music study as accessible and flexible as a yoga or language class. Founded in Iceland in 2021 and now expanding internationally, Moombix treats music education as a lifestyle, offering a seamless marketplace where adults can pursue personal growth, creativity and professional skills with teachers from around the world.

Invention ID: IS - 3510

Inventor(s):

Kari Stefansson

Invention Title:

deCode Genetecs

Invention Description:

Kári Stefánsson is an inventor or co-inventor on numerous patents and patent applications, principally involving:

- Human genetics and disease-associated genetic variants;
- Genetic diagnostics and risk prediction;
- Neurological proteins and disorders;
- Methods using population and genomic data to predict health outcomes.

For example, he was the sole named inventor on US Patent 5,532,351, concerning nucleic-acid sequences encoding oligodendrocyte-myelin glycoprotein, granted in 1996. He is also one of the inventors on the more recent international application WO 2022/104212, "Methods for decreasing mortality risk and improving health," assigned to Amgen.

INDIA

Intellectual Property Profile

Indian Patent Office

Indian Patent Office

Under the Office of the Controller
General of Patents, Designs and
Trade Marks

CGPDTM

Official patent
administration for India

India's intellectual property ecosystem has expanded rapidly as domestic research capability, manufacturing depth, digital infrastructure and startup activity continue to grow. In 2024, patenting activity remained strong, with more than one hundred thousand patent applications filed at the national office and resident-origin applications worldwide also reaching a high level. The Indian Patent Office, operating under the Controller General of Patents, Designs and Trade Marks, supports a broad and increasingly diversified innovation base.

WIPO indicators show notable activity in computer technology, pharmaceuticals, digital communication, medical technology and basic materials chemistry, reflecting the country's strengths across knowledge-intensive services, life sciences and industrial development. India's large market, engineering talent and expanding research ecosystem have increased the strategic role of patents in commercialization, technology transfer and international competitiveness. The pattern of resident and non-resident filings also highlights India's growing integration into global innovation networks.

Invention ID: IN - 9101

Inventor(s):

Muthukumaran G, Varun V, Aravind G, Udhayakumar K, Jiyavudeen T

Invention Title:

A System Capable of Automatically Reducing the Speed of the Automobile Within a Pre-Determined Controlled Speed Zone

Invention Description:

Useful for reducing the speed of the automobile automatically when the automobile is within a zone where the speed of the automobile need to be reduced /regulated. This invention is particularly useful to eliminate the drawbacks experienced in the use of speed breaks used reducing the speeds of the automobiles.

Category:

J) Traffic - Transport - Car Accessories

Invention ID: IN - 9102

Inventor(s):

Varun V

Invention Title:

Safety System for Avoiding Fall of Wall Climbing Robot

Invention Description:

A safety system for avoiding fall of wall climbing robot is designed to operate when there is a failure such as pressure drop, surface detection, drop in charge level, inclination detection and including power failure and fluctuations.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

Invention ID: IN - 9103

Inventor(s):

Varun V

Invention Title:

Design of Manual Valve with Electrical Switch

Invention Description:

Method of converting the manual fluid valve to do combinational operation of controlling the fluid supply between open/close and controlling the electrical power supply between ON/OFF using an adaptor

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

Invention ID: IN - 9104

Inventor(s):

Varun V

Invention Title:

Anti-Theft Device for Automobiles Using Brake

Invention Description:

Anti-theft Device for Automobiles using Brake is a device which utilizes existing hydraulic mechanism fitted onto path of hydraulic brake line to arrest brake using an ignition key

Category:

J) Traffic - Transport - Car Accessories

Invention ID: IN - 9105

Inventor(s):

Ittira Ranjan Bopanna, Vinod Kumar S / Jagruth Tech Private Limited, Mysore, India

Invention Title:

Eco-Friendly Interlocking paving block production from Non-Recyclable / post-consumer single use plastic, having got M60 grade strength.

Invention Description:

Patented Jagruth Tech process turns non-recyclable single-use plastic into M60-grade eco-pavers and other products, cutting CO₂, earning EPR and IPITEX recognition, and giving cities scalable, circular, carbon-negative construction solutions.

Category:

P) Energy - Renewable and green energy

Invention ID: IN - 9106

Inventor(s):

Sahana Murali, Pranav Hosmaani, Ram Svar / Vidyashilp Academy

Invention Title:

Wellness Wiring

Invention Description:

IoT-based device that enables students to discreetly request emotional support with a single button press. It instantly alerts the school counsellor, promoting timely intervention, reducing stigma, and creating a safer, more supportive school environment.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: IN - 9107

Inventor(s):

Dr. Eswarapa Pradeep Bulagonda / Sri Sathya Sai Institute of Higher Learning (SSSIHL)

Invention Title:

AMRx® - AI-Powered Culture-Free Clinical Decision Support System for Antimicrobial Resistance Management in Urinary Tract Infections (UTI)

Invention Description:

AMRx® is a culture-free, AI/ML-driven clinical decision support tool for rapid AMR diagnosis and antibiotic guidance in urinary tract infections. Clinically validated against 8,000 patients with an AUC of 0.96, it enables faster, evidence-based prescribing than conventional culture methods. Licensed to SCIINV Biosciences Pvt Ltd.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: IN - 9108

Inventor(s):

Mr. Nadavi Sridhar / SUBAM Innovations India Private Limited

Invention Title:

EEZY Blocks

Invention Description:

EEZY Blocks is a patented wall construction technology that converts processed pond ash into lightweight interlocking concrete blocks. The system enables faster, plaster-free, water-efficient, and sustainable construction while reducing labour, cost, carbon emissions, and industrial waste through a scalable manufacturing platform.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

Invention ID: IN - 9109

Inventor(s):

Shreshtha Jain / Sensicue Healthcare PVT LTD

Invention Title:

Point-of-Care Colorimetric Vitamin B12 Screening Device

Invention Description:

A portable, low-cost rapid urine test strip for evaluating Vitamin B12 levels using colorimetric detection. Designed for affordable and non-invasive point-of-care screening without requiring complex laboratory infrastructure.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: Youth Innovation Olympiad / IN - 9110

Inventor(s):

Aadya Kanchan / Vidyashilp Academy

Invention Title:

NIRI- A Device & System for Conservation of Water

Invention Description:

NIRI is a patented IoT-enabled smart water conservation system that reduces water wastage through real-time monitoring, leak detection & blockage, intelligent flow regulation and automated control. The system encourages behavioural change while saving water in homes, schools and institutions without compromising user convenience.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: Youth Innovation Olympiad / IN - 9111

Inventor(s):

Sammit Basu, Kabeer Chopra, Avinash, Paavan Chhabra, Arnab Banerjee / Vidyashilp Academy

Invention Title:

NatureLens

Invention Description:

NatureLens connects students with nature by bringing live bird telecasts into classrooms. In an increasingly digital world, it inspires curiosity, patience, and environmental awareness as students observe birds in their natural habitat.

INDONESIA

Directorate General of Intellectual Property

DGIP

Directorate General of
Intellectual Property

Official intellectual property
office of Indonesia

WIPO-recognized national IP office

Indonesia's **intellectual property (IP)** system supports a large and diversified economy with activity in manufacturing, food and consumer goods, chemicals, digital services, energy-related industries, health innovation, and creative sectors.

The **Directorate General of Intellectual Property (DGIP)** administers patents and other IP rights in Indonesia.

WIPO statistics place Indonesia among the more active patent offices in Southeast Asia. Patent activity at the national office is driven mainly by non-resident filings, while resident-origin filings have also been increasing.

Intellectual property plays an important role in commercialization, technology upgrading, research-to-market transfer, and support for domestic innovation capacity and competitiveness.

IRAN

IPC

Intellectual
Property
Center of the
**Islamic
Republic of
Iran**

NATIONAL
INTELLECTUAL
PROPERTY
OFFICE

Intellectual Property Center of the Islamic Republic of Iran

Iran's intellectual-property activity is anchored by a large domestic filing base and an innovation ecosystem spanning manufacturing, health-related technologies, chemicals, ICT, and applied engineering. According to WIPO statistics, most patent applications received by the national office originate from residents, highlighting strong domestic engagement with formal protection. Recent technical-field data identify medical technology, specialized machinery, pharmaceuticals, engines and pumps, and computer technology among notable patenting areas. The Intellectual Property Center in Tehran administers the country's industrial property system, while Iran's participation in WIPO treaties and international filing mechanisms supports outward-looking protection pathways for inventors and firms. Although cross-border patenting remains smaller than domestic activity, resident-origin applications filed worldwide and use of the PCT reflect continued international participation. With a large population base and broad industrial capabilities, Iran has a substantial platform for invention, commercialization, and knowledge-based enterprise development, making intellectual property an important bridge between research, industry, and long-term competitiveness.

Invention ID: IR - 9801

Inventor(s):

Dr. Aydin Ostovar, Dr. Davoud Beheshtizadeh, Mr. Shahin Helalnia

Invention Title:

NeuroTalent Dynamics™: Measuring Cognitive Growth to Predict Gifted Potential

Invention Description:

NeuroTalent Dynamics™ is an AI-assisted cognitive assessment system designed to identify gifted potential by measuring how a learner's thinking capacity develops over time, rather than relying only on static IQ or exam scores. The system uses short micro-cognitive tasks to track changes in reasoning speed, working memory, attention control, problem-solving strategy, error correction, and learning adaptability. These data are converted into a Cognitive Growth Velocity profile, allowing the platform to build a dynamic cognitive twin of each student, forecast emerging talent, and recommend personalized training pathways for gifted education and entrance-exam preparation.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: IR - 9802

Inventor(s):

Mohammad Panji, Anahita Panji, Sahar Ramezani Roozbahani

Invention Title:

Self-Limiting Dental Etchant Composition with Moisture-Activated Neutralizing Polymer Matrix for Controlled Etching

Invention Description:

In the field of restorative and cosmetic dentistry, acid etching plays a pivotal role in preparing tooth surfaces for bonding restorative materials such as composites, veneers, crowns, and orthodontic brackets. Traditional etching agents, primarily composed of phosphoric acid gels, create microscopic roughness on enamel and dentin to enhance mechanical adhesion. However, the process demands precise timing to avoid under- or over-etching, which can compromise bond strength or lead to demineralization and tissue damage. The present invention introduces an innovative etchant formulation that addresses these challenges through a self-regulating mechanism, ensuring safe and effective surface preparation without reliance on operator vigilance.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: IR - 9803

Inventor(s):

Ali Abbasian, Arsham Abbasian

Invention Title:

Intelligent Climate Control System by Injecting Heated Fluid, Superheated Mist, and Polar Ions to the Atmosphere with Plasma-Electromagnetic Acceleration

Invention Description:

The present invention relates to the field of scalable smart climate control systems that, by injecting hot fluid, Superheated mist, and charged ions into the atmosphere, are capable of disrupting temperature inversions, managing and stimulating the precipitation process, preventing flooding, reducing the effects of drought and climate change, and by controlling fine dust particles, dust storms, limiting the environmental and health consequences caused by them, including respiratory and infectious diseases.

Category:

D) Sanitation - Ventilation - Heating

**Invention ID: IR - 9804****Inventor(s):**

Amirhossein Akbarpour, Sarah Arzani, Mohadeseh Akbarpour, Mobina Ghasemi, MohammadSaleh Bahadori

Invention Title:

pH-Responsive Dental Liner Composition for In-Situ Detection of Marginal Microleakage

Invention Description:

A smart light-curable dental liner incorporating a pH-sensitive fluorescent system to detect acidic changes beneath restorations. This acidity is typically associated with microleakage and the early development

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: IR - 9805****Inventor(s):**

Alemeh Salehibaladehi, Yona Tavakoli, Arshavir Dehbandi, Meysam Norogoljah, Ariyan Norogoljah, Seyedhamid Latifirostami

Invention Title:

Structural Seismic Damper with an Elastomeric Core and a Telescopic Force Transfer Mechanism

Invention Description:

A novel hybrid ring-telescopic structural seismic damper featuring a high-damping elastomeric core that efficiently dissipates seismic and dynamic energy through an innovative telescopic force-transfer mechanism. The invention enhances structural safety, reduces earthquake-induced damage, and improves energy absorption while maintaining a compact and practical design. It is suitable for buildings, bridges, bracing systems, and other structures exposed to seismic and dynamic loading.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: IR - 9806****Inventor(s):**

LiliRose Tazari

Invention Title:

Modular Medical Wearable Belt for Non-Invasive Monitoring of Uterine Contractions, Fetal Movements, and Fetal Heart Rate

Invention Description:

A modular non-invasive prenatal monitoring belt that synchronously tracks uterine contractions, fetal movements, and fetal heart rate through independent sensor cartridges, IMU-assisted noise reduction, and wireless data transfer, enabling reliable real-time assessment for home care, clinical follow-up, high-risk cases, and telemedicine.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: IR - 9807****Inventor(s):**

Tohid Ghasemnejad

Invention Title:

An AI Literature-Mining System for Evidence-Based Extension of the Human Phenotype Ontology

Invention Description:

AI system mining biomedical literature to propose evidence-backed gene/disease to phenotype associations, deciding whether each finding extends an existing term or defines a new one.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: IR - 9808****Inventor(s):**

Mojgan Abed

Invention Title:

Advanced Multi-Modal Platform for Cervical Imaging Image Processing, and Therapy for Cervical Lesions and Vaginal Infections

Invention Description:

Non-invasive imaging and phototherapy for cervical precancer. Treats vaginal infections and promotes tissue repair. Records and processes images to monitor treatment.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: IR - 9809****Inventor(s):**

Milad Ziaeiian, Gohar Rahmani, Sajjad Shabani

Invention Title:

ASCRS(Advanced Smart Carbon Recovery System)

Invention Description:

An integrated system that captures industrial waste heat and CO2C to optimize aeroponic greenhouse environments, significantly boosting crop yields while reducing resource use.

Category:

P) Energy - Renewable and green energy

**Invention ID: IR - 9810****Inventor(s):**

Mohammad Masiha Sekhavat, Faraidon Farzad, Zahra Naghi Zadehdehno, Radmehr Hakamirad, Mohammadreza Shahkhal, Mahmoodreza Movahedin

Invention Title:

AI-Driven Digital Twin Platform for Scar-Free Precision Wound Regeneration

Invention Description:

Conventional wound care lacks real time, quantitative assessment of tissue physiology, delaying intervention and reducing healing predictability. Our AI driven Digital Twin integrates multimodal imaging, tissue modeling, and precision regenerative therapy to deliver predictive, personalized regeneration beyond simple wound closure.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

**Invention ID: IR - 9811****Inventor(s):**

Morteza Hassandoust

Invention Title:

Outcome-Verified Adaptive Trust Consensus Engine for Infrastructure-Degraded Emergency Networks

Invention Description:

A novel AI-driven emergency response architecture that continuously learns from verified operational outcomes. It enables adaptive trust, resilient distributed consensus, and reliable coordination.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: IR - 9812

Inventor(s):

Bijan Khaghanirad, Sevin Alimoradi Pilehrood, Fatemeh Saberi, Zahra Mohammad Hosseini, Janadokht Ghajeh / Neuris

Invention Title:

Deep Learning Framework for Automated Brain Tumor Detection

Invention Description:

AI diagnostic assistant for brain tumors: a 3D U-Net analyzes CT volumes to segment tumors and generate explainable heatmaps, scores, and reports. Trained on ~260k annotated scans, it achieves ~95% accuracy and 3-5s per scan, integrates with PACS, and supports privacy-preserving federated updates.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: IR - 9813

Inventor(s):

Fatemeh Emami Moghaddam, Elsa Mohseni

Invention Title:

Smart Surgical Table with AI and Blockchain-Based Detection of Surgical Instruments

Invention Description:

An AI-powered surgical table identifies and tracks instruments by type, weight, and position, ensuring none are left inside the patient post-surgery. It logs all surgical data on a blockchain for secure, transparent, and traceable records. Designed to boost safety and reduce errors, it also reconstructs procedures for training and alerts staff in real time.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: IR - 9814

Inventor(s):

Mehdi Jamoor, Fariba Bakhtiari

Invention Title:

AI-Based Intelligent System for Monitoring, Analyzing, and Detecting Fire Hose Abnormal Conditions

Invention Description:

Firefighting operational environments are among the most complex and hazardous working conditions, where hose-related disruptions such as entanglement, kinking and restricted movement can significantly affect firefighters' performance and the efficiency of fire suppression operations. This invention presents an AI-based intelligent system that utilizes distributed sensor nodes and intelligent analysis of operational data to enable continuous monitoring, identification of abnormal fire hose conditions and detection of fire hose abnormal conditions. By analyzing the real-time condition of the fire hose, the proposed system enhances firefighters' situational awareness, reduces operational risks and supports more effective decision-making in critical situations. The proposed approach represents a significant step toward the development of next-generation intelligent systems for firefighting, emergency response and disaster management.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: IR - 9815

Inventor(s):

Saeid Abazari, Faranaksadat Mirsobhani Langrudi

Invention Title:

Modular Power Generation System from Non-Recyclable Waste Using Controlled Combustion, Indirect Heat Transfer, a Stirling Engine Array, and an Integrated Environmental Pollution Control and Management System

Invention Description:

TerraVolt WTE is a modular underground waste-to-energy system that converts non-recyclable waste into electricity using controlled combustion, indirect heat transfer, and Stirling engines. The system integrates energy recovery, leachate management, and emission control to improve efficiency while minimizing environmental impact. Its scalable modular design enhances equipment durability and enables reliable deployment in urban and industrial applications.

Category:

P) Energy - Renewable and green energy

Invention ID: IR - 9816

Inventor(s):

Saeid Abazari, Farnaz Khosravi

Invention Title:

Hot-air generation device equipped with multiple circulation pumps and a vacuum water tank

Invention Description:

A smart, energy-efficient portable hot-air generator integrating a vacuum-insulated water tank, dual induction heaters, circulation pumps, PID control and UV air purification.

Category:

D) Sanitation - Ventilation - Heating

Invention ID: IR - 9817

Inventor(s):

Saeid Abazari, Ali Abdolahi, Sepehr Karachi

Invention Title:

A device and method for burning non-recyclable waste and simultaneously producing electricity and hydrogen, without causing environmental pollution

Invention Description:

An integrated hybrid power plant that converts non-recyclable waste into electricity and high-purity hydrogen through controlled combustion, steam generation, and electrolysis. To ensure that no environmental pollution is created, the ash and remaining carbon after combustion are transferred to the stabilization section, where heavy metals are separated and the stabilized carbon is prepared for industrial uses such as concrete additive.

Category:

P) Energy - Renewable and green energy

Invention ID: IR - 9818

Inventor(s):

Saeid Abazari, Nahid Najafi, Mohammadreza Esghaei

Invention Title:

Energy Generation Device from Long and Short Water Waves

Invention Description:

An adaptive modular wave-energy generation system designed to capture surface oscillations from short, medium, and long water waves and convert them through a sealed piston, rack-and-pinion, and one-way flywheel mechanism into stabilized rotational energy for clean electrical power generation in marine environments.

Category:

P) Energy - Renewable and green energy

Invention ID: IR - 9819

Inventor(s):

Mehdi Lashgari, Amir Lashgari, Can Acar, Anahita Sepandarand, Abtin Rafiei

Invention Title:

Movement-Based Play Therapy and the Patient's Movement Correction Side System in Physiotherapy

Invention Description:

An app to help elderly and young patients. With the help of this app, you can encourage the patient to move around their room.

Control

Iraq's industrial property authority
for patents and industrial models

Iraq's patent landscape remains modest in global comparison, yet current WIPO statistics indicate a system in which resident participation is central. In 2024 the Iraqi national office recorded 638 patent applications, including 556 resident filings and 82 non resident filings. Resident-origin patent applications filed worldwide totaled 569, showing that most Iraqi patenting activity remains concentrated in the domestic system.

WIPO data also identify biotechnology, pharmaceuticals, and transport among the leading technical fields for Iraqi resident patenting. These patterns suggest inventive activity linked to healthcare, applied engineering, and practical industrial needs. As Iraq pursues reconstruction, industrial modernization, and broader economic diversification, intellectual property institutions can play an important role in supporting technology transfer, commercialization, and the protection of locally developed solutions. Strengthening examination capacity, awareness of IP rights, and innovation support mechanisms will be important for translating inventive effort into wider economic value.

Invention Title:

Production of Nanoliposomal amphotericin B 0.4 % topical gel as effective treatment for human Acne Vulgaris

Invention Description:

Acne (also known as Acne Vulgaris) is a persistent chronic skin inflammatory condition of the pilosebaceous follicles that affects people all over the world. Acne is projected to affect 9.4 % of the global population, ranking it eighth among skin diseases. Acne affects more than 85 % of teenagers, and the disease can persist into adulthood which often occurs in females and accounts for two-thirds of dermatologist consultations for acne.

Invention Title:

Diabetic Foot Guardian (DFG). AI-Based Non-Invasive Early Diabetic Foot Risk Assessment System

Invention Description:

Developed by Eng. Adam Abdulrahman Ramadan from Middle Technical University - Baqubah Technical College, Iraq, Diabetic Foot Guardian is an AI-assisted, non-invasive system that evaluates early diabetic foot risk using multimodal physical sensing and intelligent analysis.

JORDAN

Hashemite Kingdom of Jordan

Industrial Property Protection Directorate (IPPD)

Ministry of Industry, Trade and Supply

IPPD

Industrial Property
Protection Directorate

Official Industrial property
office of Jordan

Jordan's intellectual property landscape reflects a knowledge-oriented economy that combines higher education strengths, entrepreneurship, and gradual institutional modernization. The Industrial Property Protection Directorate, based in Amman under the Ministry of Industry, Trade and Supply, maintains patent and related industry patent bings, and serves as a key interface between innovators and the legal protection system. WIPO data indicate that Jordan's patent volumes remain modest in global comparison, yet the country shows active participation in international IP pathways and a steady pattern of outward-oriented inventive activity. Universities and research-led institutions contribute visibly to the ecosystem, while pharmaceuticals, medical technology, food chemistry, and selected engineering domains appear among notable technical fields. Jordan has also strengthened its international integration through WIPO membership and participation in key IP treaties, including the Patent Cooperation Treaty. Overall, the country's IP profile suggests an innovation system with meaningful regional relevance, strong human capital foundations, and continuing opportunities to deepen commercialization, technology transfer, and research-to-market performance.

PROTECTING IDEAS,
EMPOWERING INNOVATION,
DRIVING FUTURE GROWTH.

Ministry of Intellectual Property (MOIP)

The Republic of Korea has developed one of the world's most research-intensive and export-oriented innovation systems, supported by advanced **digital infrastructure**, **strong industrial capabilities**, and sustained investment in science and technology. Patent filing activity remains among the highest globally, reflecting the country's concentration of technology firms, manufacturing leaders, universities, and public research institutes. Intellectual property plays a central role in commercializing research, protecting competitive advantages, and enabling growth in semiconductors, electronics, mobility, biotechnology, and green technologies. The national IP framework helps innovators convert **R&D into market value** while supporting startups and SMEs with international ambitions. High volumes of resident filings at home and abroad also highlight the outward-looking nature of Korean innovation. In this context, the IP system remains a critical institutional pillar for productivity, technology diffusion, and long-term global competitiveness.

Official industrial
property office of
Mexico

MEXICO

Instituto Mexicano de la Propiedad Industrial (IMPI)

Mexico combines a large domestic market with a deeply integrated manufacturing economy linked to North American value chains. Automotive, electronics, medical devices, aerospace, agribusiness and consumer products support steady demand for patents and other forms of industrial property. The Mexican Institute of Industrial Property (IMPI) administers industrial property rights and plays a central role in protecting inventions and supporting technology transfer. WIPO data show that Mexico records substantial patent filing activity at the national office, although most filings originate from non-resident applicants, reflecting the country's openness to international business and cross-border innovation. Resident patenting remains more modest, yet universities, research centers and firms continue to expand activity in advanced manufacturing, health technologies, chemistry and digital solutions. Stronger commercialization pathways, R&D investment and links between public research and industry can further improve domestic innovation performance.

PALESTINE

Intellectual Property and Patent Landscape

GENERAL DIRECTORATE OF INTELLECTUAL PROPERTY

Ministry of National
Economy Ramallah

*Institutional IP
administration and
registration functions*

The State of Palestine's innovation landscape is shaped by a young population, universities, entrepreneurship initiatives, and increasing interest in knowledge-based economic activity. Intellectual property administration is associated with the General Directorate of Intellectual Property within the Ministry of National Economy, which supports legal and administrative pathways for protection and registration. In the latest readily accessible cross-country institutional datasets, standard patent-series indicators for Palestine are limited or not consistently reported, so the current picture is best interpreted through institutional development rather than filing scale alone. In practice, intellectual property remains relevant to technology commercialization, brand development, creative industries, and research translation. Sectors such as ICT services, education, pharmaceuticals, agrifood activity, and small-scale manufacturing can benefit from stronger IP awareness and protection strategies. WIPO-linked cooperation, information access, and innovation-support services can also help researchers, entrepreneurs, and businesses navigate prior-art search, registration processes, and commercialization pathways with greater confidence.

Intellectual Property Office of the Philippines

IPOP HL

INTELLECTUAL PROPERTY
OFFICE OF THE PHILIPPINES

Intellectual Property
Office of the Philippines

IPOP HL

Official intellectual
property office of the
Republic of the
Philippines

The Philippines has a developing innovation ecosystem in which IPOP HL plays a central role in patent administration, IP awareness, commercialization support, and technology transfer. The country combines a large domestic market with strengths in electronics, manufacturing, food-related technologies, pharmaceuticals, and service-oriented digital activity.

WIPO data show that non-resident filings account for a large share of patent applications at the national office, indicating international commercial interest, while resident-origin filings worldwide show continued local inventive activity. The country's top patent-related technical fields include food chemistry, other special machines, pharmaceuticals, basic materials chemistry, and IT methods for management. As a WIPO member since 1980 and a PCT contracting state, the Philippines continues to strengthen the role of intellectual property in innovation policy, enterprise development, and integration with regional and global knowledge markets.

Invention ID: PH - 6301

Inventor(s):

Richard Nixon C. Gomez, Rigel R. Gomez, Bauertek Farmaceutical Technologies Corporation

Invention Title:

Pro Nitro Lite (PNL)

Invention Description:

PNL is a powdered juice drink made from Beetroot, Garcinia cambogia and Antidesma bunius which provides a wide range of health benefits. Induces fat burn and weight loss, increases endurance, enhances performance.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: PH - 6302

Inventor(s):

Richard Nixon C. Gomez, Rigel R. Gomez, Bauertek Farmaceutical Technologies Corporation

Invention Title:

Black Garlic. (Bauertek - All Natural Black Garlic)

Invention Description:

A combination of Black Garlic extract, Ehretia microphylla and Mimosa pudica. This helps the body deal with digestive tract disorders and diseases. Inhibits Colon cancer cell growth, antispasmodic and anti-inflammatory

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: PH - 6303

Inventor(s):

Richard Nixon C. Gomez, Rigel R. Gomez

Invention Title:

Jamperine

Invention Description:

Jamperine is the most powerful anti-diabetic food supplement. Made from Eugenia Jambolana extracts, it can reduce blood sugar by as much as 40% in 2 hours. It also helps the body produce and utilize insulin.

Poland

POLAND

Patent Office of the Republic of Poland

Poland combines a large European market, a diversified industrial base, and a steadily developing innovation ecosystem. The country's intellectual property framework is anchored by the Patent Office of the Republic of Poland, which administers national protection for inventions and other industrial property rights. WIPO data show a patent system led largely by resident filings at the national office, while Polish applicants also pursue protection abroad through regional and international routes. The national profile points to technical strengths in fields such as civil engineering, medical technology, specialized machinery, measurement, and organic fine chemistry. Poland's broader innovation position is supported by its manufacturing capabilities, engineering talent, and integration with European research and business models. Intelligent property the core players implement rules in helping mutual property rights, while investors translate technical knowledge into protected assets, while also linking domestic innovation activity with wider international markets.

Inventor(s):

Zofia Chrapko

Invention Title:

Building a prototype of the device, conducting research on the acoustic spectrum of the heartbeat

Invention Description:

This prototype device is designed for non-invasive cardiac assessment through spectral analysis of heart sounds auscultated using a medical stethoscope equipped with a built-in condenser microphone.

Category:

M) Medical Technology - Medical Engineering - Medicine - Hygiene

Invention ID: PL - 482

Inventor(s):

Poidło Dla Pszczół

Invention Title:

Bee Watering System

Invention Description:

Bee Watering System is an eco-friendly, automated solution providing honeybees with continuous clean water. Water is released drop by drop for safe drinking, while excess water is collected and recirculated. Powered by solar energy, the system supports bee health, colony survival, biodiversity, and environmental conservation.

Category:

H) Agriculture – Forestry and Garden – Pet and Farm Animal Supplies

Invention ID: PL - 483

Inventor(s):

Marian Chrapko

Invention Title:

Chrapko Dual Monoblock Stereo Tube Power Amplifier MC-3

Invention Description:

CHRAPKO MC-3 is a dual-monoblock Class AB stereo tube amplifier delivering approximately 2 x 80W. Independent channels ensure optimal separation, while advanced feedback loops provide low distortion and precise sound control. It supports 2Ω, 4Ω, and 8Ω loads and operates without a separate preamplifier.

Category:

B) Electronics – Electricity – Methods of Communication

Invention ID: PL - 484

Inventor(s):

Marian Chrapko

Invention Title:

Chrapko Stereo Speakers MC-4

Invention Description:

CHRAPKO MC-4 is a full-range floor-standing dipole speaker that delivers natural, realistic sound forward and backward. Its rigid oak construction reduces resonance, while synchronized drivers, a third-order crossover, oxygen-free copper wiring, and high-quality components ensure accurate, open sound reproduction.

Category:

B) Electronics – Electricity – Methods of Communication

ROMANIA

State Office for Inventions and Trademarks (OSIM)

OSIM

STATE OFFICE FOR
INVENTIONS AND
TRADEMARKS

National intellectual
property office of
Romania

Romania's intellectual property landscape reflects a diversified economy shaped by manufacturing, engineering capability, research institutions, and growing digital services. The national patent system is administered by the State Office for Inventions and Trademarks (OSIM), which serves as the central authority for patent filing and protection at the national level. Patent activity remains moderate in global comparison, yet resident-origin filings indicate continuing inventive output from companies, universities, and public research bodies. Romania's innovation profile is linked to sectors such as automotive production, electrical equipment, ICT services, industrial technologies, health-related research, and energy solutions. As a member of the European Union and a WIPO member state, Romania operates within a broader international intellectual property framework that supports protection, technology transfer, and market expansion. Strengthening IP awareness, commercialization pathways, and research-to-market conversion remains important for improving the national innovation ecosystem.

SAUDI AUTHORITY FOR INTELLECTUAL PROPERTY SAIP

Saudi Arabia has expanded its intellectual property ecosystem in step with broader economic diversification and innovation goals. The Saudi Authority for Intellectual Property centralizes the administration of patents, trademarks and industrial designs while supporting awareness, enforcement and commercialization. Recent filing levels at the national offices show a significant increase in the number of applicants, while resident-origin patent applications filed worldwide point to a growing base of local inventive activity. Universities and research institutions, including King Abdullah University of Science and Technology, contribute meaningfully to the country's patent pipeline. Industrial technologies, petrochemicals, energy, advanced materials, digital services and health-related innovation remain relevant to the national landscape. As one of the largest economies in the Middle East, Saudi Arabia assigns increasing strategic importance to intellectual property as part of its long-term knowledge economy agenda. Its patent profile reflects stronger integration with international IP systems together with continued opportunities to deepen resident innovation intensity and commercialization outcomes.

SERBIA

Intellectual Property Office of the Republic of Serbia

Serbia's intellectual property landscape reflects a mixed but steadily developing innovation ecosystem rooted in engineering, manufacturing, ICT, pharmaceuticals, agriculture-related industries, and university research. Patent activity remains modest in absolute scale, yet the country maintains a functioning institutional framework, active resident filing, and participation in international IP systems. The Intellectual Property Office of the Republic of Serbia supports protection across patents, trademarks, industrial designs, and related rights, helping domestic applicants formalize innovation and compete more effectively in regional and international markets. Resident-origin filings worldwide indicate continued outward engagement beyond the domestic office, while patents in force show an established stock of protected technical knowledge. Serbia's broader innovation environment benefits from a skilled human-capital base, research institutions in Belgrade and Novi Sad, and growing integration with European markets. Overall, IP plays an important enabling role in strengthening commercialization, technology transfer, and long-term competitiveness.

Invention Title:

Method for enzyme immobilization on oxidized potato peels

Invention Description:

The present invention relates to an innovative process that repurposes waste from the potato processing industry, peel as a carrier for immobilizing peroxidase enzymes. This approach is not only cost-effective but also aligns with the principles of the "zero waste" concept and contributes to the reduction of greenhouse gas emissions.

**Invention ID: RS - 38105****Inventor(s):**

Dr Mladen Čosić, Dr. Nenad Šušić, Marko Prica / Institute for Testing of Materials - IMS, Belgrade, Serbia / BAI

Invention Title:

Innovative Prestressing-Based Pile Load Test

Invention Description:

The subject of this invention is an innovative method for testing the bearing capacity of reinforced concrete piles - the Prestressing-Based Pile Load Test (PBPLT), used in foundation engineering. This test determines pile capacity by applying a static prestressing force at the pile head, producing a reliable load-settlement curve and enabling assessment of both working and ultimate bearing capacity. The PBPLT was developed in accordance with existing engineering models and standards, with the added benefit that test piles can remain in service as working piles after testing. The procedure is carried out in several stages: site and soil analysis, pile construction, test preparation and execution, result evaluation, and pile strengthening/grouting. The method is based on the theory of prestressing, soil-structure interaction, and signal processing, and is designed to be safe for the testing crew and applicable to all types of reinforced concrete piles.

Spanish Patent and Trademark Office (OEPM)

OEPM

Spanish Patent and
Trademark Office

Official intellectual
property office of
Spain

Spain maintains a diversified innovation base supported by industrial capability, scientific research, and participation in both national and European intellectual property systems. Patent activity by residents reflects continued strength in science-driven and applied technology fields, with pharmaceuticals, medical technology, biotechnology, electrical machinery, and transport among the notable areas of activity. The Spanish Patent and Trademark Office, known as OEPM, serves as the national authority for patent protection while inventors also make active use of regional and international routes. WIPO data show that Spain combines domestic filing activity with a broader international patent footprint, indicating outward-looking innovation behavior by resident applicants. Patents in force remain comparatively substantial, suggesting a mature stock of protected technology rights. In this context, intellectual property functions as an important instrument for translating research, industrial development, and business innovation into legally protected assets within Spain and across foreign markets.

Inventor(s):

Mohammad Mohammadi

Invention Title:

Stable peracetic acid aqueous solution with scale removal property, for use in CIP systems in the food, dairy, and beverage industries

Invention Description:

This invention is related to the preparation of commercial acid sanitizing and/or cleaning compositions comprising peracetic acid with antimicrobial and descaling properties at the same time. The present invention is used in CIP (cleaning in place) systems in the food, dairy, and beverage industries, as well as heating and cooling circulating water systems in all industries.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: ES - 3402

Inventor(s):

Meysa Malaek, Ali Ghasemi

Invention Title:

Noise-free hybrid temperature control system for building mechanical systems

Invention Description:

This invention aims to provide sustainable energy for building mechanical systems while eliminating the noise generated by conventional fluid transfer pumps. The system utilizes the full solar spectrum by converting ultraviolet light into electricity through photovoltaic cells, while visible and infrared radiation are transformed into thermal energy using a xenon-filled heat-absorbing coil. Heated air is transferred against natural convection using a modified ion thruster that accelerates ionized xenon with electric fields and permanent magnets, eliminating mechanical blowers. To increase thermal efficiency, methane recovered from wastewater and hydrogen produced through solar-powered electrolysis are used as additional heat sources. The treated wastewater can be reused as fertilizer, while water produced from hydrogen combustion is collected for recycling. Furthermore, the invention replaces conventional water circulation pumps with a particle acceleration system that guides water molecules through staged flow correction modules. Since the process operates at frequencies beyond human hearing, it enables silent circulation of both compressible and incompressible fluids while reducing energy consumption and improving overall system efficiency.

Category:

P) Energy - Renewable and green energy

Invention ID: ES - 3403

Inventor(s):

Seher Hasanzade

Invention Title:

Dentin Derivative Signal (DDS) for Differentiation of Dental Pulp Stem Cells and Dentin-Pulp Complex Regeneration

Invention Description:

The present invention relates generally to the field of regenerative dentistry and tissue engineering. More specifically, it pertains to a novel biological signal derived from natural dentin for inducing the differentiation of dental pulp stem cells (DPSCs) into odontoblasts, thereby promoting the regeneration of the dentin-pulp complex. This invention offers a natural, cost-effective, and accessible alternative to conventional synthetic growth factors and complex regenerative procedures.

TAIWAN

Taiwan Intellectual Property Office

Taiwan has a mature innovation economy built on advanced manufacturing, semiconductors, electronics, ICT, precision engineering, and strong private-sector R&D. Patent activity at TIPO remained stable in 2024, with 50,823 invention patent applications. Domestic applicants remained the largest single origin group with 19,586 invention filings, while Japan, the United States, Mainland China, and the Republic of Korea were major non-resident origins. Semiconductors were the leading technical field in Taiwan, while the broader ecosystem is reinforced by export-oriented industry, research institutions, and a strong culture of technological commercialization.

Invention ID: TW - 88601

Inventor(s):

Min Di, Ching-Han Yang, Li-Wei Kuo, Ti-Hung Ku, Yu-Wei Yang, Yan-Cheng Ji, Chia-Wei Tsai, Ying-Hsun Lai / Institute for Information Industry / National Taichung University of Science and Technology / National Taitung University

Invention Title:

AI Edge-XR Fusion Sphere: AI Edge Computing x XR Immersive Interactive System

Invention Description:

AI Edge-XR Fusion Sphere is an AI Edge-driven extended reality fusion multimedia system that integrates hardware, software, and generative AI technology to deliver a multimedia fusion service for diverse exhibition events and educational applications.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Inventor(s):

Min Di, Ching-Han Yang, Li-Wei Kuo, Ti-Hung Ku, Sheng-Hui Ko, Chin-Feng Lai, Shih-Yeh Chen, Ying-Hsun Lai / Institute for Information Industry / KENMEC Mechanical Engineering Co., Ltd / National Cheng Kung University / National Taitung University

Invention Title:

Mixed Reality Industrial Assembly Collaboration System with AI Glasses

Invention Description:

This invention is an AI software system for industrial assembly collaboration that integrates with smart glasses to achieve mixed reality (MR) technology. This system employs smart glasses with MR technology, combined with AI recognition and collaboration from experienced personnel.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: TW - 88603

Inventor(s):

Tien-Hong Chang / Lytone Enterprise, Inc.

Invention Title:

Lactobacillus paracasei strain LT12 as immunity regulatory agent.

Invention Description:

The core of this technology is our independently developed and isolated probiotic strain, Lactobacillus paracasei LT12. Patented for its remarkable immune-regulatory mechanisms, LT12 effectively modulates cytokine secretion to enhance immune defense.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

**Invention ID: TW - 88604****Inventor(s):**

Tien-Hong Chang / Lytone Enterprise, Inc.

Invention Title:

Innovative Formula for Effectively Relieving Muscle Cramps and Discomfort

Invention Description:

We discovered an innovative composition effectively designed to alleviate muscle cramps caused by exercise or nocturnal events, significantly reducing cramp frequency, pain intensity, and duration.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

**Invention ID: TW - 88605****Inventor(s):**

Tsung-Hsin Lin, Chia-Ling Lin, Yu-Xuan Wu, Tsung-Jen Su, Yao-Ren Li, Shang-Hua Yang, Yu-Ching Kang, Yi-Li Lin / Lung-hwa University of Science and Technology

Invention Title:

Copper Alloy Coatings for Semiconductor Manufacturing

Invention Description:

This invention provides a method for preparing copper-rhodium coatings. Furthermore, depending on the total number of atoms in the copper-rhodium plating layer, the rhodium content ranges from 0.2 to 1.5 at%. Copper-rhodium plating layers prepared by the aforementioned method possess low resistivity and high stability.

Category:

C) Building - Architecture - Civil Engineering - Construction - Materials - Woodwork

**Invention ID: TW - 88606****Inventor(s):**

Chui-Ping Hu, Jung-Hui Yen, Chen-Ying Chiang, Robert David Suhr, Chun-Tai Yen / Baichao Greenergy Tech. Co., Ltd.

Invention Title:

Cross-Domain Data Analyzer: Multimodal Signal Fusion & Matching Platform for Pre-Test Research

Invention Description:

Operating offline, it employs an innovative "acoustic trigger timing mechanism" to synchronize audio spectra with skin micro-current signals, eliminating transmission delays and observational bias while ensuring maximum data privacy.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: TW - 88607****Inventor(s):**

Chui-Ping Hu, Jung-Hui Yen, Chen-Ying Chiang, Robert David Suhr, Chun-Tai Yen / Baichao Greenergy Tech. Co., Ltd.

Invention Title:

LSF Intelligent Cross-Domain Pre-Test System

Invention Description:

The LSF Intelligent Pre-Test System breaks the traditional requirement of taking medicine before evaluating effects. It captures voice, image, or skin micro-current signals and compares them with over 800 specially processed herbal image modules.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

**Invention ID: TW - 88608****Inventor(s):**

Shang-Chen Hsieh, Bing-Chen Hsieh, Tang-Chuan Wang, Alexander Hsieh, Shih-Huan Chen, You-Cheng Yu, Sung-Huai Hsieh / Yujing Vision System Inc.

Invention Title:

AI-Powered Multi-Modal RAG Platform for NBI-Based Early Gastric Cancer Detection

Invention Description:

This intelligent multimodal platform enhances early gastric cancer detection by integrating AI, medical imaging, and Retrieval-Augmented Generation (RAG). It offers real-time endoscopic analysis, automated lesion detection with heatmaps, and evidence-based diagnostic suggestions from medical literature.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: TW - 88609****Inventor(s):**

Bing-Chen Hsieh, Shang-Chen Hsieh, Tang-Chuan Wang, Alexander Hsieh, Shih-Huan Chen, You-Cheng Yu, Sung-Huai Hsieh / Yujing Vision System Inc.

Invention Title:

Real-Time AI Audio Monitoring System for Low-Cost Sleep Apnea Detection

Invention Description:

This non-invasive AI system offers a cost-effective alternative to complex hospital-based polysomnography (PSG) for sleep apnea detection. By employing a CNN-LSTM hybrid model, it processes real-time audio data converted into Mel-spectrograms to predict symptoms continuously.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: TW - 88610****Inventor(s):**

Tsung-Lung Yang / Cotron Corporation

Invention Title:

Brainwaves induction earphone

Invention Description:

Innovation: We find that the pure tone let people reduce sensation and the frequency-difference to trig brainwaves vary from people to people. We use music(multi-tones) and sweep frequency-difference to replace pure tone and fixed frequency-difference. Finally, the brainwaves can be always evoked.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

**Invention ID: TW - 88611****Inventor(s):**

Ching-Tzu Huang, Jin-Shan Huang, Chin-Chun Huang / JHENHE Co., Ltd.

Invention Title:

Fully Personalized Height-Adjustable Pillow

Invention Description:

This pillow features zones for both back and side sleeping, with adjustable comfort to fit individual body types, offering over 300 size options for the most comfortable sleeping position. Made from high-heat-dissipation, hydrophilic memory foam, it includes fully perforated ventilation holes and heat-conducting channels to stay cool and comfortable.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: Youth Innovation Olympiad / TW - 88612

Inventor(s):

Vicky Shen / Sierra Canyon School

Invention Title:

ECOSPHERE

Invention Description:

An Interactive Rainforest Terrarium + Educational App for Children A living architectural micro-environment designed to reconnect kids with nature.

Category:

O) Teaching Research - Pedagogical Items

Invention ID: Youth Innovation Olympiad / TW - 88613

Inventor(s):

Monica Li / Arcadia High School

Invention Title:

CoNest

Invention Description:

CoNest is a connected system that rethinks urban wildlife management through humane design. By combining AI- assisted observation, modular nesting infrastructure, and public education, the project explores how design can shift urban interaction from control toward coexistence.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: Youth Innovation Olympiad / TW - 88614

Inventor(s):

Katherine Yao / Northfield Mount Hermon

Invention Title:

Kreyate

Invention Description:

Katalyze is a dynamic skincare "printer" to create bespoke skincare formulas on demand. Reimagining beauty routines as a personalised, intuitive experience similar to "cooking in the kitchen", Katalyze replaces static, one-size-fits-all bottled products with a countertop Smart Mixer that creates fresh, single-use formulas on demand.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: Youth Innovation Olympiad / TW - 88615

Inventor(s):

Cindy Huang

Invention Title:

Echo Sense

Invention Description:

Echo Sense is a connected system that makes environmental noise visible through space. By combining real-time sound sensing, responsive architectural surfaces, and data interpretation, the project transforms invisible sound into light, color, and spatial feedback.

Invention ID: Youth Innovation Olympiad / TW - 88616

Inventor(s):

Tracy Yutong Tang / Concordia International School Shanghai

Invention Title:

Inner Projection

Invention Description:

Inner Projection is an experimental system that translates human psychological states into dynamic ground-based visual projections. Through a hybrid framework of spatial sensing, generative visuals, and interaction design, the project explores how perception is continuously shaped by external forces and collective environments.

Category:

O) Teaching Research - Pedagogical Items

Invention ID: Youth Innovation Olympiad / TW - 88617

Inventor(s):

Xie Yi / Interlochen Arts Academy

Invention Title:

Vantage Point Deck

Invention Description:

A location-based spatial computing platform — a UGC social network for physical space. Four modules form a complete creative loop: discover hidden spatial content, experience it through AR, contribute your own emotional imprint, and build your spatial portfolio.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

Invention ID: Youth Innovation Olympiad / TW - 88618

Inventor(s):

Hui-Han Cheng, Yu-Sheng Huang, Kenneth Hsu / Kaohsiung Municipal Longhua Junior High School / St. Paul's High School

Invention Title:

FocusMastery

Invention Description:

Focus Mastery: An AI-Powered Gamified Support System is designed for children with ADHD. To reduce the stress often associated with traditional training or therapy, it integrates the Schulte Grid, Whac-A-Mole, memory games, and a task-based virtual pet into an engaging digital experience.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: Youth Innovation Olympiad / TW - 88619

Inventor(s):

Hui-Han Cheng, Kaijing Hsu / Kaohsiung Municipal Longhua Junior High School / Fuhwa Junior High School

Invention Title:

Intelligent Hazard Alarm Safety Helmet Management System

Invention Description:

It is designed for high-risk environments such as construction sites, sewers, and confined spaces. Unlike traditional helmets that provide only passive impact protection, this system integrates gas detection, temperature and humidity monitoring, ZigBee communication, LED hazard indicators, voice alarms, and a management platform.

Category:

E) Security - Rescue - Alarm

Invention ID: Youth Innovation Olympiad / TW - 88620

Inventor(s):

Yu-Ting Chien, Pei-Cheng Shih, Yu-Sheng Huang, Mu-Lin Lee / Fuhwa Senior High School ; St. Paul's High School / St. Dominic Catholic High School

Invention Title:

VoiceWeaver

Invention Description:

An AI-Assisted Multimodal Communication System is designed for people with aphasia who have difficulty forming complete spoken sentences. By turning limited signals into meaningful sentences, VoiceWeaver helps people who struggle to speak regain a more natural way to be heard and understood.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: Youth Innovation Olympiad / TW - 88621

Inventor(s):

Yu-Sheng Huang, Chin-Yu Yang, Chin-Siang Yang, Kenneth Hsu, Jayden Weichieh Chen, Chen-Hsiang Ko, Yin-His Liang, Calvin Yokuan Creekmore / St. Paul's High School ; St. Dominic Catholic High School / Kaohsiung Municipal Cisian Junior High School

Invention Title:

AllerDetect GO: An AI-Powered Comprehensive Allergen Detection and Analysis System

Invention Description:

AllerDetect GO is a proactive health-protection system designed for children, older adults, and allergy-sensitive users. By integrating detection, warning, recording, and smart-home response, this invention helps users identify allergen risks earlier, reduce accidental exposure, and build a safer daily health-protection network.

Category:

Q) Paramedical - Health - Foodstuffs - Drinks - Cosmetics

Invention ID: Youth Innovation Olympiad / TW - 88622

Inventor(s):

Yu Hsia, Zhi-Ting Lin, Shih-Chi Lin, Tsu-Hsuan Chao / Kang Chiao International School Linkou Campus

Invention Title:

Siphon-Based Micro Hydropower Generator

Invention Description:

Our invention uses the power of flowing water and height differences to operate, allowing water to keep moving in an energy-saving and environmentally friendly way. It does not require a large amount of electricity, making it suitable for irrigation systems, water supply in remote areas, and green energy projects.

Category:

P) Energy - Renewable and green energy

Invention ID: Youth Innovation Olympiad / TW - 88623

Inventor(s):

Zhi-Ting Wang / Kang Chiao International School Linkou Campus

Invention Title:

Underwater Feeding System

Invention Description:

This project presents an innovative Underwater Eating System that combines a sealed container, one-way valves, and waterproof tubing technology. The system uses air pressure control and airtight structures to allow users to safely consume food underwater while preventing external water from entering the container or helmet.

Category:

E) Security - Rescue - Alarm

**Invention ID: Youth Innovation Olympiad / TW - 88624****Inventor(s):**

Yu-Chi Cheng, Yu-Ming Cheng, Kai-Hsuan Weng / Dong-Guang Junior High School

Invention Title:

Multi-purpose bionic rescue robot

Invention Description:

This work incorporates various biological structures and features to address safety issues faced by divers in distress or due to severe weather and low visibility. Its biomimetic design minimizes environmental impact. This work can also be easily applied to other fields. The multi-unit operation mode makes rescue operations more flexible.

Category:

E) Security - Rescue - Alarm

**Invention ID: Youth Innovation Olympiad / TW - 88625****Inventor(s):**

Shao-Yung Chou, Yung-Che Tsao, Mu-Cheng Chou / National Lotung Industrial Vocational High School / National Lo-Tung Senior High School / County Shing-Chung Junior High School

Invention Title:

Smart Monitoring System

Invention Description:

This system serves as a Smart Monitoring System featuring five core AI functions: Item Search Mode; Security Monitoring Mode; Open Cabinet Alert Mode; Leaving Home Reminder Mode; and an Intelligent assistant that analyzes item placements.

Category:

N) Hardware - Software - Cybersecurity - Blockchain - Internet of things (IoT)

**Invention ID: Youth Innovation Olympiad / TW - 88626****Inventor(s):**

Yu-Jen Lin, Bo-Yu Lin / Zhongshan Elementary School / Fu-Shing Junior High School

Invention Title:

BrellaLink

Invention Description:

When entering the store, customers place their umbrellas in the stand and receive a dedicated Beacon device to pair the user with their umbrella. If the system detects the user leaving without returning the device or retrieving the umbrella, a buzzer sounds to prevent them from forgetting it.

Category:

G) Commercial, Industrial and Office Equipment

**Invention ID: Youth Innovation Olympiad / TW - 88627****Inventor(s):**

An-Yun Liu, Yu-Chieh Hsiao, Phoebe Lee, Yu-Kai Lin, Chia-Hsun Yao, Tsung-Yu Tsai, Allen Pin-Kuan Yeh, Pin-Yi Yeh, Pin-Wei Yeh

Invention Title:

OmniHabitat

Invention Description:

"OmniHabitat" is an all-in-one IoT-enabled smart habitat ecosystem designed for amphibians, reptiles, and exotic pets. Addressing the challenges of live-prey feeding, the system introduces a pioneering "Smart Dietary Management" framework.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

**Invention ID: Youth Innovation Olympiad / TW - 88628****Inventor(s):**

An-Yun Liu, Yu-Chieh Hsiao, Phoebe Lee, Yu-Kai Lin, Chia-Hsun Yao, Tsung-Yu Tsai, Allen Pin-Kuan Yeh, Pin-Yi Yeh, Pin-Wei Yeh

Invention Title:

Rhythm Racer

Invention Description:

"Rhythm Racer" is an innovative educational toy designed to tackle the issues of childhood physical inactivity and lack of focus caused by excessive screen time. By combining rhythmic drumming with a remote-controlled vehicle, this device transforms gaming into an active learning experience.

Category:

L) Games - Sports - Hobbies

**Invention ID: Youth Innovation Olympiad / TW - 88629****Inventor(s):**

Yu-Cheng Lin, Yi-Li Chen, Kuan-Chen Kuo, Yu-Che Chiang, Jui-Tse Sun, Chien-Hung Tien, Tzu-Hsun Kuang, Hsin-Tung Liu / The Affiliated Senior High School of National Taiwan Normal University

Invention Title:

Visible Knowledge: An Interdisciplinary Marble-Run STEM Learning Platform

Invention Description:

This invention uses a marble-run system to transform abstract STEM concepts into a visible, hands-on, and interactive learning experience. It integrates mechanical transmission, magnetic force, gas sensing, electronic control, and AI gesture recognition.

Category:

O) Teaching Research - Pedagogical Items

**Invention ID: Youth Innovation Olympiad / TW - 88630****Inventor(s):**

Ting-Wei Hsu / Kang Chiao International School

Invention Title:

Heat Sensitive Fire Exit

Invention Description:

This invention uses a special thermochromic organic coating that changes color as the temperature rises. When the ambient temperature exceeds 70°C, the coating turns into a warning color, allowing firefighters or evacuees to visually identify whether there is flame or dangerous heat behind the door.

Category:

E) Security - Rescue - Alarm

**Invention ID: Youth Innovation Olympiad / TW - 88631****Inventor(s):**

Ting-Wei Hsu / Kang Chiao International School

Invention Title:

Novel Artificial Electronic Nose

Invention Description:

This invention is an intelligent non-contact security screening platform that integrates a real-time air sampling system, Gas Chromatography-Mass Spectrometry (GC-MS), and Artificial Intelligence (AI)-based odor recognition technology. This system can be installed behind airport X-ray baggage inspection equipment.

Category:

D) Sanitation - Ventilation - Heating

Invention ID: Youth Innovation Olympiad / TW - 88632

Inventor(s):

Yi-Feng Kuo, Yi-Lung Kuo / Keelung Municipal Ming Chuan Junior High School / Walnut Grove Secondary School

Invention Title:

Infrared type of collision alarm devices

Invention Description:

This device is a warning system integrated with infrared sensor technology, specifically designed to prevent secondary collisions after vehicle accidents. Compared with traditional warning triangle signs, this system features included proactive detection and real-time alerts, greatly improving environmental safety around accident area.

Category:

E) Security - Rescue - Alarm

Invention ID: Youth Innovation Olympiad / TW - 88633

Inventor(s):

Yu-Chia Lei / New Taipei San-Chung Commercial and Industrial Vocational High School

Invention Title:

Multi-Function Safety Carton Cutter

Invention Description:

Traditional cutters often cause injuries during bulk carton processing. This innovative 3D-printed cutter features a "latch-locking mechanism" for safe blade retraction. It enhances operational safety while enabling precise measuring and dual-direction cutting—perfectly advancing green recycling and the circular economy.

Category:

A) Mechanics - Engines - Machinery - Robotic - Tools - Industrial Process - Metallurgy

Invention ID: TW - 88634

Inventor(s):

Danny Peng

Invention Title:

Radar Assisted Bicycle Safety Deceleration System

Invention Description:

A bicycle safety system that combines radar detection, speed monitoring, warning alerts, and a variable resistance wheel to reduce accident risk before emergency braking becomes necessary.

Category:

E) Security - Rescue - Alarm

THAILAND

Department of Intellectual Property

Ministry of Commerce

DIP

Department of
Intellectual Property

Official intellectual property
office of Thailand

Thailand has a **diversified innovation** base shaped by export-oriented manufacturing, electronics, automotive production, agroindustry, consumer goods, and a **growing health** and life-sciences ecosystem. WIPO data show that Thailand functions both as a domestic market for **intellectual property protection** and as a regional **destination for foreign filings**, with non-resident applications accounting for a large share of patent activity at the national office. In 2024, the Thai office received 8,727 patent applications, while applicants residing in Thailand filed 1,553 patent applications worldwide. WIPO profile data also highlight technical activity in optics, macromolecular chemistry and polymers, electrical machinery and energy, and medical technology.

The Department of Intellectual Property plays a central role in examination, registration, and administration across industrial property rights.

Overall, Thailand's patent profile reflects a maturing IP system that supports industrial upgrading, technology transfer, commercialization, and broader participation in regional innovation networks.

Inventor(s):

P.Sakulsirirat, J.Patthanavarit, D.Kingphan and S. Ekgasit / Chulalongkorn University

Invention Title:

AiryFeet: Innovation for Foot Hygiene

Invention Description:

AiryFeet invention relates to an antifungal spray for athletes, such as golfers and other sports participants, to help prevent common fungal infections caused by sweat, moisture, and prolonged use of footwear. The spray contains antifungal agents that can be applied to the feet, toes, nails, socks, and shoes to inhibit fungal growth and reduce the risk of conditions such as onychomycosis (fungal nail infection), athlete's foot (tinea pedis), and other superficial fungal skin diseases. Its formulation promotes foot hygiene, comfort, and protection during sports and daily activities.

Invention Title:

AbleCoach: The Digital Collaboration Platform for Inclusive Workplaces

Invention Description:

AbleCoach is a technical prototype of a digital collaboration platform designed to support workplace coordination among employees with disabilities and organizational stakeholders. The current prototype module is named DCC (Digital Collaboration Coach) under the AbleCoach platform. The system receives role-based user data, work situations, support requests, workplace barriers, and coordination status from employees with disabilities, co-workers, supervisors, HR, and management. Its Rule-Based Coordination Engine processes these inputs against predefined coordination rules to classify issues and generate practical recommendations, such as communication adjustments, assignment to responsible persons, follow-up actions, status monitoring, and escalation alerts.

**Invention ID: TH - 6604****Inventor(s):**

A. Klomchit, K. Anan, and D. Athinuwat / Thammasat University

Invention Title:

Biological Innovation for Managing Citrus Greening Disease and Reducing Antibiotic Use in Citrus Export Production Systems

Invention Description:

Biological Innovation for Managing Citrus Greening Disease and Reducing Antibiotic Use in Citrus Export Production Systems is an eco-friendly solution developed to control citrus greening disease through beneficial microbial technology.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

**Invention ID: TH - 6605****Inventor(s):**

Sopa Visitsak and Nattaree Sridaranon / Kasetsart University

Invention Title:

Natural Ventilation Skydome (100% Direct Radiation Protection)

Invention Description:

An innovative roof-mounted solution providing 100% UV-protected indirect daylight and electricity-free ventilation that functions even in windless conditions. It effectively reduces glare, heat, and mold without noise or leakage, while enhancing occupant well-being across all building scales through zero-carbon operation and recyclable materials.

Category:

**Invention ID: TH - 6606****Inventor(s):**

Daranee Saksiriphol / Srinakharinwirot University

Invention Title:

Moral Mind Story Series: A Short Story Collection for Promoting Moral Values and Reading Habits in Children

Invention Description:

The "8 Virtue Moral Storybook" (Diligence, Thrift, Honesty, Discipline, Politeness, Cleanliness, Unity, Kindness) aims to help children develop reading skills and essential moral values. Featuring animal characters to represent virtues, using color codes, visual guidance, and QR codes with sign language and Braille children with special needs.

Category:

Patcharapol Sanpote / Srinakharinwirot University

Invention Title:

Magic Box for Special Needs Development

Invention Description:

The innovation entitled "Magic Box for Special Needs Development" for Children with Special Needs" was developed as a readiness-training toolkit designed to strengthen fine motor skills, enhance hand-eye coordination, and promote self-help skills in daily living activities.

Category:

O) Teaching Research - Pedagogical Items

**Invention ID: TH - 6608****Inventor(s):**

N. Phakdee, P. Sroypetkasem and P. Chaiprasart / Naresuan University

Invention Title:

TropiSense AI™

AIoT Autonomous Irrigation and Climate Intelligence Platform for Precision Tropical Fruit Production

Invention Description:

TropiSense AI™ is an AIoT platform for precision tropical fruit production that combines smart sensors, AI, and automated irrigation. It optimizes water use, improves fruit quality, reduces labor, and supports climate-smart Agriculture 5.0.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

A. Thongklin, P. Sroypetkasem and P. Chaiprasart / Naresuan University

Invention Title:

CocoSense AI: Intelligent

NIR-Based Platform for Precision Harvesting and Export Quality Prediction of Aromatic Coconut

Invention Description:

CocoSense AI™ combines NIR spectroscopy and AI to non-destructively predict aromatic coconut maturity and quality in real time. The system enables precise harvesting, improves export quality consistency, reduces postharvest losses, and supports smart agriculture and sustainable tropical fruit supply chains.

Category:

H) Agriculture - Forestry and Garden - Pet and Farm Animal Supplies

**Invention ID: TH - 6610****Inventor(s):**

Invention Title:

MEMOs AIRWAY SERIES: Patient-Matched High-Performance NiTi Stent System with Recapturable Delivery System for Canine Tracheal Collapse

Invention Description:

Self-expanding NiTi tracheal stent for canine tracheal collapse, with a tapered, recapturable delivery system for minimally invasive placement. Its 9 sizes fit each dog's breed and weight, reducing complications. Validated under ISO 25539-2 and ISO 10993 and clinically proven, it replaces surgery and cuts treatment time more than fourfold.

Invention Title:

Antibacterial Bed Sheets and Pillowcases from Thai Herbs for Elderly and Dependent Care in Nursing Homes

Invention Description:

This innovation develops antibacterial bed sheets and pillowcases infused with Thai herbal extracts for elderly and dependent care in nursing homes.

The herbal-treated fabric effectively inhibits the growth of pathogenic bacteria commonly associated with healthcare-associated infections.

Wechsawan Lakas / Chiang Mai Rajabhat University

Invention Title:

Plastic Waste-Modified Asphalt Model for Sustainable Road Construction

Invention Description:

An innovative infrastructure solution incorporating non-commercial plastic bag waste into asphalt cement at a 25% weight ratio. Tested across 4 Thai national parks, it diverts over 30,010 kg of plastic from landfills and improves road stability by up to 30% , offering a scalable model for global circular economy.

Invention Title:

Hybrid Citrate (Hy-CiP): A Waste-Derived Green Surfactant Platform for Energy and Industrial Application

Invention Description:

Hy-CiP (Hybrid Citrate Platform) is a green surfactant and bio-based ionic liquid platform developed from agricultural waste, including used palm oil, lime peels, and biomass ash. The innovation enhances biodiesel stability, reduces CO₂ emissions, and supports eco-friendly cleaning products. Hy-CiP integrates Green Chemistry, Circular Economy, ESG, and Blue Ocean Strategy to create sustainable value for energy and industrial applications.

Category:

P) Energy - Renewable and green energy

B. Keawaram, T. Boonprakob, J. Sittiyoth, W. Sawasdee, T. Sankumlue and C. Saengchan / Electricity Generating Authority of Thailand (EGAT)

Invention Title:

Smart Data Fusion: Enhancing UAV Photogrammetric Point Clouds with Terrestrial Laser Scanning

Invention Description:

Process innovation fusing UAV photogrammetry with terrestrial laser scanning to create high-accuracy 3D terrain models for mines without disrupting machinery and operation. This boosts coal production by 10,000 tons/month, adding \$12M over 3.5 years.

It reduces deep-mine exposure to improve safety, and scales to overseas mines.

Invention Title:

Development of a Screening System for Detecting Potential Atrial Fibrillation to Estimate Stroke Risk

Invention Description:

ThromiSense uses AI and real-time ECG analysis to detect Atrial Fibrillation (AF), a major stroke risk factor. Abnormal heart rhythms can cause blood clots that may travel to the brain and block blood vessels. The system provides accessible early screening, real-time monitoring, and risk alerts for users.

UNITED ARAB EMIRATES

Development of Innovation in the Economy and Patents Department

Abbreviation:
DIEPD

Ministry of Economy & Tourism

Descriptor:
Official patent
administration in the United
Arab Emirates

Location:
Abu Dhabi

The **United Arab Emirates** combines hydrocarbons wealth with an active diversification agenda. The country has strengthened its innovation ecosystem through investment in advanced manufacturing, logistics, aviation, digital technologies, clean energy, and knowledge-intensive services. While patenting activity remains smaller than in the **world's largest filing economies**, domestic and cross-border activity reflects the UAE's role as an international business and technology gateway connecting markets across the Middle East, Africa, and Asia. The institutional IP framework is managed through the Ministry of Economy & Tourism, which administers patents and industrial property rights. The UAE participates in the international IP system through its membership in the **World Intellectual Property Organization (WIPO)** and its use of global IP services to support innovation and commerce.

USPTO

United States
Patent and Trademark Office

National patent and trademark
office of the United States.

An agency of the
U.S. Department of
Commerce.

UNITED STATES OF AMERICA

United States Patent and Trademark Office

The U.S. **patent system** is a cornerstone of one of the world's most innovative and **competitive economies**, supporting leadership across digital **technology**, **semiconductors**, **advanced manufacturing**, **pharmaceuticals**, **biotechnology**, **aerospace**, **energy**, and a wide range of **research-intensive industries**. The United States Patent and Trademark Office (USPTO) is among the world's largest patent offices and plays a central role in fostering innovation and protecting intellectual property rights.

The United States remains a leading origin of patent filings worldwide, with U.S. residents filing substantial patent applications at home and abroad. At the same time, the USPTO receives a large volume of applications from non-residents seeking protection in the U.S. market.

Intellectual property rights granted by the USPTO enable commercialization of inventions, attract investment, support the formation and growth of enterprises, and facilitate technology transfer between academia and industry. By safeguarding innovations and research outputs, the USPTO strengthens U.S. economic growth, global competitiveness, and public welfare.

Inventor(s):

Manha Saleha / Pequod AI

Invention Title:

Pequod AI Trade Tech

Invention Description:

Pequod AI is an AI-powered trade operations software platform designed to simplify and coordinate international trade. The software brings together customs rulings, HS classifications, Incoterms, landed cost analysis, freight intelligence, trade documentation, shipment data, and compliance requirements into a single intelligent workspace. By automatically interpreting and connecting information across commercial invoices, packing lists, bills of lading, customs documentation, and logistics updates, Pequod identifies inconsistencies, recommends next actions, and supports operational decision-making. The platform helps coordinate workflows between importers, suppliers, customs brokers, freight forwarders, carriers, and warehouses, reducing manual coordination while improving visibility, compliance, and efficiency throughout the import and export process.

**Invention ID: US - 113****Inventor(s):**

Aisha McCain / Casual Recovery Enterprises

Invention Title:

Acoustic Dose Meter

Invention Description:

Acoustic Dose Meter is a patented respiratory monitoring device that accurately measures the amount of medication remaining inside a pressurized metered dose inhaler using acoustic sensing technology. Unlike conventional dose counters that estimate remaining doses by counting inhaler actuations, the Acoustic Dose Meter analyzes acoustic wave frequencies within the medication canister to determine medication available, providing patients and healthcare providers with precise, reliable information. The device integrates acoustic sensors, signal processing, a microprocessor, rechargeable power, a digital display, and wireless communication into a compact housing designed to accommodate standard metered dose inhalers. Proprietary algorithms interpret acoustic data to calculate remaining medication, display available doses, and communicate information with connected mobile applications and healthcare platforms for improved medication management and remote monitoring. Designed for individuals living with asthma, COPD, and other chronic respiratory diseases, the Acoustic Dose Meter helps reduce uncertainty, prevent unexpected empty inhalers, and support treatment decisions. By replacing estimation with direct measurement, the technology enhances medication adherence, improves patient confidence, and supports clinical outcomes. The Acoustic Dose Meter establishes a new standard in respiratory care by combining precision sensing, connected health technology, and actionable data to improve patient safety and ensure medications are available when needed most consistently.

Category:

**Invention ID: US - 114****Inventor(s):**

Aisha McCain / Casual Recovery Enterprises

Invention Title:

Everyday Hero app/software platform

Invention Description:

Everyday Hero is a patented digital emergency response platform that transforms emergency medications into connected safety ecosystems, extending protection beyond the medication itself. Designed to integrate with connected medical devices, the platform bridges the critical gap between recognizing a medical emergency and receiving life saving assistance. Using intelligent mobile technology, Everyday Hero helps users locate emergency medications, activate emergency alerts, share real time GPS location, notify designated caregivers, and support faster emergency response. The platform is designed to reduce delays in accessing treatment while improving communication, coordination, and situational awareness during time critical medical events. Everyday Hero is compatible with rescue inhalers for asthma and COPD, epinephrine auto injectors, naloxone devices, glucagon emergency devices, and other emergency medications. Its flexible architecture enables integration with connected medical devices, healthcare systems, caregivers, and future digital health technologies, creating a scalable platform that evolves with advances in emergency care. More than a mobile application, Everyday Hero is the intelligence powering the connected emergency response experience. By combining digital health, emergency communication, and location based technology, the platform empowers patients, caregivers, healthcare providers, and first responders with information to act faster, improve outcomes, and help save lives when every second counts.

**Invention ID: US - 115****Inventor(s):**

Aisha McCain / Casual Recovery Enterprises

Invention Title:

Electronic Material Sleeve for Medical Devices

Invention Description:

Electronic Material Sleeve for Medical Devices is a patented connected health platform that transforms existing emergency medications into smarter, more accessible medical devices without altering the medication itself. Designed as an external protective sleeve, the technology integrates wireless communication, embedded electronics, LED lighting, audible alerts, vibration, rechargeable power, location services, and smartphone connectivity into one intelligent system. The platform helps users quickly locate misplaced emergency medications through sound, light, and vibration, reducing delays when treatment is urgently needed. It also supports emergency communication by enabling users to alert designated contacts, share GPS location, and help coordinate a faster response during a medical emergency. The technology is designed for rescue inhalers

used to treat asthma and COPD, epinephrine auto injectors, naloxone devices, glucagon emergency devices, and other emergency medications. As an external accessory, it can be adapted across multiple medications and manufacturers without modifying the drug or delivery system. By combining intelligent hardware with connected digital health technology, Electronic Material Sleeve for Medical Devices enhances accessibility, preparedness, and patient safety. The platform provides a scalable foundation for connected emergency care, helping patients, caregivers, healthcare providers, and first responders improve emergency response, reduce treatment delays, and increase access to life saving care.

Category:

**Invention ID: US - 116****Inventor(s):**

Sean Hsieh / Sonic Scientific

Invention Title:

"Hades", energy modules

Invention Description:

The "Sonic Scientific Hades Module" is a compact, high-performance platform designed for advanced laboratory, industrial, and research applications where precision, reliability, and modularity are essential. Built with a rugged and portable architecture, the Hades Module integrates multiple functional components into a single system, allowing users to configure the device for a wide range of testing, monitoring, and process control tasks. Its modular design simplifies maintenance and future upgrades, reducing downtime while extending product lifespan. Engineered for demanding environments, the Hades Module emphasizes stable operation, accurate data acquisition, and efficient power management. It supports rapid deployment in laboratories, pilot production lines, field testing, and quality assurance environments. The compact footprint allows easy transportation and installation without sacrificing performance. Sonic Scientific developed the Hades Module to provide researchers, engineers, and technical professionals with a scalable solution that adapts to evolving project requirements. Whether used for product development, scientific research, equipment validation, or specialized testing, the Hades Module delivers dependable performance, operational flexibility, and professional-grade reliability. Its combination of innovative engineering, modular architecture, and robust construction makes it a valuable solution for organizations seeking efficient and future-ready scientific instrumentation.

**Invention ID: US - 117****Inventor(s):**

Nithya Tammana / Save Drop

Invention Title:

Bio Layer

Invention Description:

BioLayer is a nature-inspired, four-layer water filtration system designed to reduce lead and other contaminants in school drinking fountains - built entirely from natural materials for under \$38, with no electricity and no plastic waste. Invented by Nithya Tammana, an 11 year-old water conservation advocate from New Jersey, BioLayer uses four sequential filtration layers: pebbles to remove large debris, sand to trap fine particles, activated charcoal to remove chemicals, and live Sphagnum moss - the key innovation - which naturally helps reduce lead levels in water. In testing conducted on World Water Day 2026, BioLayer reduced lead concentration from 50 parts per million - over 3,000 times above the EPA action level - to non-detectable levels across three rounds of filtration. BioLayer's effectiveness is supported by published peer-reviewed research on Sphagnum moss as a natural heavy-metal adsorbent. BioLayer is designed for global scalability - the natural materials are available in most countries, assembly requires no tools or electricity, and the total cost is under \$38. It is currently undergoing independent trials led by five student co-scientists across multiple sites. Because every child deserves clean water.

Device reduces hotspot related solar panel fires by 99%, instant-off first responder cutoff switch, eliminates blocking diode increasing output power and eliminating blocking diode back drain. Increases solar module and equipment lifespan.

Category:

P) Energy - Renewable and green energy

Invention ID: US - 122

Inventor(s):

Danielle Canter / Sanctuary Sleep Co

Invention Title:

Crown Lift Insert Sleep System

Invention Description:

Crown Lift Insert System® is a patent-pending head and neck support system designed to restore support inside any standard pillow. Unlike traditional pillows that collapse through the night, Crown Lift works by adding customizable support beneath the pillow surface to help reduce "head drop," maintain head and neck positioning, and improve overall sleep comfort. The system includes interchangeable support inserts of varying heights, allowing users to personalize support based on sleep position, pillow type, and comfort preference. Crown Lift was created after the inventor's own cervical spine challenges highlighted a gap in existing pillow support solutions. Designed to work with existing pillows rather than replace them, Crown Lift offers a simple, adaptable approach to improving nighttime support and sleep quality.

Invention Title:

CalmSync

Invention Description:

Calm Sync is a wearable system designed to help athletes detect and manage performance anxiety in real time. The device continuously monitors physiological signals associated with stress and calculates an anxiety index that represents the athlete's current stress level. When anxiety levels rise, Calm Sync provides immediate feedback through a connected mobile app, helping the athlete relax and regain focus before their performance is affected.

Category:

L) Games - Sports - Hobbies

Invention ID: US - 125

Inventor(s):

Christopher Huang

Invention Title:

CT Hand

Invention Description:

The CT Hand is a fully mechanical spring-actuated proximal prosthetic made for the e-NABLE organization, whose members design and distribute prosthetics to those in need all around the world. The hand itself fills a gap within current designs, as the existing e-NABLE catalog of hands does not include any prosthetic designs that are particularly effective at mimicking the gripping power of real human fingers. Most e-NABLE catalog designs are also made for maximising manufacturing simplicity and mechanical durability. While the CT Hand does cost relatively more to make than standard designs, its enhanced grip and durability (since it's made entirely of mechanical parts) makes it especially viable to be distributed and used long-term by people in need of proximal prosthetics. Beyond just this organization, the CT Hand expands on standard cable driven hands in mechatronics through chain actuation, where metal linkages combined with an adjustable frame provide significantly more dexterity and grip strength. The hand is able to contract through wrist contractions and splay the fingers outwards through parallel wrist movements. The hand can be made with both machined aluminum or 3D printed with PLA plastic.

Invention Title:

Chess Adventures

Invention Description:

Chess Adventures is a 6 book curriculum that takes the child from their first steps in chess all the way to playing in their first tournament and is geared towards children aged 4-12. Each book is made to walk the child through the world of chess at different levels in an easy manner. No dense text, no difficult language. The most elementary book is our best seller, and has been achieved the #1 New Release on Amazon. It is made for the extremely young kids, and retains their attention with an innovative process: treating chess as a videogame. Examples include allowing the child to interact with a guide, allowing them "secret levels" (coloring pages, mazes, etc), and eventually defeat the boss (learn how to checkmate). This creative book is also the first of its kind on Amazon. The two other learning books are designed for older kids, but still ensure the child is learning with visuals and isn't stuck there reading boring, dense chess textbooks. The last 3 books are designed for when the child is playing the game. Written by Shiven Balaji, California State Chess Champion and a chess enthusiast, this workbook is perfect for your budding chess pro.

Invention Title:

Honeycomb Hugs Organic Lotion Bars

Invention Description:

HoneyComb Hugs are organic lotion bars that come in 3 kid-pleasing fragrance. They're packed with nourishing ingredients like shea butter and coconut oil, perfect for keeping your kid's delicate skin soft and healthy. Here's what makes HoneyCombs Hugs a hit with kids and parents: No More Mess: Ditch the greasy lotions and messy spills! Our solid bars are easy for little hands to use. Gentle and Safe: Made with organic ingredients and free of harsh chemicals, our lotion bars are perfect for sensitive skin. On-the-Go Perfect: These compact bars fit easily in backpacks, or pockets for convenient moisturizing anywhere.

Invention Title:

woundSNAP: Scanning Networking AI-powered Platform

Invention Description:

Wounds are dangerous yet common in the United States. However, access to information and linkage to care are often delayed, especially in remote and field-deployed locations. A real-time analysis of a wound with connection to care is necessary. woundSNAP utilizes an image recognition pipeline to detect and analyze a wound for wound type, severity, and infection risk. Once the wound is analyzed, the information is given to the user along with accommodations for the patient's medical conditions and wound locations on the body. The custom-trained models and original pipeline were trained/coded in Python and are currently transformed into an iOS app prototype- the algorithm is accessible and works offline. Moreover, a spectroscopy system was prototyped for use alongside the app. It utilizes a multispectral sensor to scan a wound, send data to device, and the app runs a Machine Learning data analysis to predict wound depth- critical for understanding accurate wound severity. Professionals in the medical field reviewed the software. woundSNAP is highly applicable for emergencies and military field deployments to aid in assessing wounds and connecting with care rapidly, thereby improving patient outcomes.

Invention Title:

Water Condenser and Monitor System

Invention Description:

The world is losing freshwater at an accelerating rate due to climate change-driven evaporation and prolonged droughts. The Water Condenser and Monitor System addresses this crisis with a modular, solar-powered, floating platform that simultaneously prevents evaporation, harvests atmospheric water via condensation, and monitors water quality in real time protecting both human consumption and local biodiversity.

Invention Title:

Conver-leggings

Invention Description:

The first convertible athletic tights designed with volleyball athletes in mind. Stop packing two outfits for every practice. Our innovative performance tights convert into fitted athletic shorts, allowing athletes to adapt instantly to changing temperatures during training and competition. Wear the full-length tights for warm-ups, travel, or cooler conditions, then quickly convert them into shorts when it's time to play. Designed specifically for volleyball players, this versatile garment offers the comfort, flexibility, and performance athletes need without compromising style or mobility. Beyond convenience, it is also a more sustainable choice. Instead of purchasing separate leggings and compression shorts, athletes invest in one high-performance garment that serves both purposes. Fewer products, less waste, and greater value. One garment. Two ways to wear it. Built for performance, designed for changing conditions.

Invention Title:

Virtual Lifeguard: Real-Time Drowning Detection App Using Mobile Computer Vision

Invention Description:

Virtual Lifeguard is an innovative, decentralized mobile application that transforms consumer smartphones into automated edge-AI monitoring tools to mitigate unintentional drowning. Addressing the biological limitations of human attention, such as vigilance decrement, and the high financial barriers of commercial safety systems, this research presents a sophisticated, real-time computer vision pipeline optimized for mobile edge infrastructure. Unlike conventional static models, the proposed architecture implements a hybrid framework combining YOLOv11 for robust spatial tracking of swimmers with an R(2+1)D Convolutional Neural Network to analyze temporal motion signatures. To resolve the critical challenge of data scarcity, the system utilizes a One-Class Support Vector Machine trained exclusively on normal swimming data to construct a mathematical baseline and isolate drowning anomalies. Emphasizing a strict Privacy by Design philosophy, the models undergo INT8 quantization to achieve sub-second latency on the device's Neural Processing Unit without relying on cloud servers or internet connectivity.

Invention Title:

Gummy Guard

Invention Description:

Every year in the U.S., roughly 50,000 young children are rushed to the ER for accidental medicine poisoning. Gummy vitamins and supplements look and taste just like candy treats, but a major legal loophole means these bottles aren't legally required to have child-safe caps. To fix this crisis, I talked to a doctor, pediatrician, and pharmacist to invent Gummy Guard a universal safety cap that easily moves from bottle to bottle. Instead of using expensive electronics, Gummy Guard uses pure physics! By combining magnetic force and spring force, it creates a secure lock that is impossible for a child's brain to figure out. However, it requires zero physical strength for seniors and grandparents to open, completely replacing painful "push-and-turn" lids. Gummy Guard is ultra-low-cost so every single family can afford it. It completely closes the dangerous supplement loophole, protects kids' curiosity, and gives parents true peace of mind!

Invention Title:

BetaSense

Invention Description:

Youth-onset Type 2 Diabetes (T2D) is accelerating globally, yet traditional pediatric screenings rely on costly, invasive blood draws or standard glucose tests that miss early systemic warnings. BetaSense is an ultra-low-cost diagnostic ecosystem designed to catch pediatric metabolic stress before permanent damage occurs. The invention combines a physical hardware stack featuring an optimized micro:bit v2 and an integrated optical sensor with a novel, proprietary machine learning classifier. Unlike standard monitors that track glucose in isolation, BetaSense introduces a multi-modal data pipeline. It mathematically fuses non-invasive, raw optical fluid metrics with input from a crucial immunological inflammatory biomarker: the Neutrophil-to-Lymphocyte Ratio (NLR). By analyzing the intersection of optical fluid density and systemic cellular inflammation markers, BetaSense executes its machine learning model completely locally at the device edge. This eliminates the need for expensive infrastructure or internet connectivity. The final output provides rapid low-cost at a fraction of the cost of clinical labs. BetaSense transforms metabolic screening into an accessible, painless, and highly predictive early-intervention tool for youth worldwide.

UZBEKISTAN

Intellectual Property Agency under the Ministry of Justice
of the Republic of Uzbekistan

Uzbekistan's intellectual property landscape is developing alongside broader economic modernization and diversification. **Patent activity** by residents remains modest in global terms, yet **national-office filings** and patents in force reflect a functioning domestic base and some non-resident interest. Innovation capacity is increasingly evident in areas such as chemicals, food processing, agriculture-related technologies, materials, selected manufacturing activities, and a growing digital economy. Strengthening the commercialization of research, firm-level R&D investment, and international linkages can help deepen patenting performance and technology diffusion. Effective IP administration—supporting protection, disclosure, and the enabling environment for innovators and businesses—plays an important role in sustaining this progress.

Vietnam's **patent landscape** reflects a fast-industrializing, export-oriented economy that is expanding its technological capabilities while remaining closely linked to international investment and global value chains. In 2024, the country recorded 9,904 patent applications at its national office, with non-resident filings continuing to represent the majority, underscoring **Vietnam's role as an attractive market** for foreign technology owners. At the same time, resident-origin patenting reached **1,392 applications** worldwide, signaling gradual growth in local inventive activity. **Electronics, transport, digital communication**, measurement, and specialized machinery appear among the leading technical fields in resident patenting. Strong manufacturing performance, rising digital adoption, and continued policy attention to innovation and intellectual property administration support a mature IP environment. As Viet Nam pursues longer-term ambitions in advanced manufacturing, ICT, green industry, and productivity upgrading, the strategic use of patents will remain increasingly important.

Invention Title:

Using Artificial Intelligence for Detecting Urban Green Spaces

Invention Description:

This study proposes the application of artificial intelligence for detecting, evaluating, and planning urban green spaces in rapidly developing cities. By utilizing satellite imagery and aerial photographs combined with instance segmentation techniques, the system is capable of automatically identifying and quantifying urban vegetation with high accuracy, enabling the assessment of green-space distribution across districts and residential areas. The research also integrates spatial analysis to identify "green deserts" and recommend potential locations for sustainable architectural solutions such as rooftop gardens and pocket parks. By transforming urban planning from a qualitative approach into a data-driven methodology, the project contributes to environmental management, climate change adaptation, and sustainable urban development, while offering broad applications in smart-city governance and ecological monitoring.

Invention Title:

Designing human DNA mismatch primers to Improve Forensic Identification of wild animal-derived bone and horn samples

Invention Description:

Illegal wildlife trade poses a significant threat to biodiversity in Southeast Asia, particularly in Vietnam. Forensic DNA analysis is an essential tool for species identification and provides critical evidence in legal proceedings. While conventional universal primers are generally effective for fresh samples, they frequently fail when applied to degraded bone and horn specimens. These samples typically contain very low quantities of endogenous DNA and are often overwhelmed by human DNA contamination, leading to unsuccessful amplification or inaccurate species identification. To overcome this challenge, we developed novel mismatch PCR primer pairs targeting the mitochondrial 16S rRNA region. These primers contain deliberate mismatches with human DNA at the 3' end, allowing preferential amplification of wild animal DNA while substantially reducing human DNA amplification.

The poster for the 7th International Invention and Innovation Competition for IFIA INV Title Holders is set against a dark background with a glowing city skyline and a large, detailed globe in the center. The globe is surrounded by concentric circles and a bright light source at its base. The IFIA logo, featuring a stylized 'I' and 'F' and the text 'Founded 1968 INTERNATIONAL FEDERATION OF INVENTORS' ASSOCIATIONS', is in the top right. The main title 'THE 7TH INTERNATIONAL INVENTION AND INNOVATION COMPETITION FOR IFIA INV TITLE HOLDERS' is prominently displayed in white and yellow. Below it, the date 'SEPTEMBER 2027' is shown. Statistics include '50 COUNTRIES' with a globe icon, '1,500 INVENTIONS' with a lightbulb icon, and 'GLOBAL INNOVATORS UNITED FOR A BETTER FUTURE' with a group of people icon. A call to action states 'Virtual Event Hosted by IFIA, Geneva, Switzerland' next to a globe icon. At the bottom, there is a 'JOIN THE GLOBAL INNOVATION MOVEMENT' button, the website 'IFIA.com', social media icons for Facebook, LinkedIn, X, YouTube, and Instagram, and a QR code.

BAUERTEK

FARMACEUTICAL TECHNOLOGIES

RESEARCH

We are heavily engaged in the identification, isolation, testing, optimization and the eventual commercialization of specific compounds. Our in-house R&D uses state-of-the-art equipment such as HPLC, AAS and many others. This will ensure quality is never compromised.

DEVELOPMENT

We have a highly efficient and perfectly sanitary facility that can transcend global standards. BauerTek Farmaceutical Technologies Corporation aims to supply both finished goods and raw materials worldwide.

MANUFACTURING

BauerTek Farmaceutical Technologies Corporation is the country's premier pharmaceutical and nutraceutical manufacturer. By consistently exceeding stringent government manufacturing standards, the company continues to raise the benchmark for quality, safety, and innovation in the industry.
