SELECTING APPROPRIATE RIGID INSTRUMENT BRUSHES

TAKE THE GUESSWORK OUT OF CHOOSING BRUSHES

Ask about our Complimentary Brush Consultation

Tips for choosing a brush:

1

Instrument Type

Consider external and internal areas being cleaned.

2

Technique

Review device and brush IFU recommendations.

3

Appropriate Size

Proper bristle diameter provides direct friction to remove soil.
Brush length should be sufficient to exit instrument to remove bristle debris.
Multiple brushes may be needed for one item.

Wrong Size = Ineffective Debris Removal =
Patient Harm + Instrument Damage + Added Cleaning Time

Too Big

Too Small

Correct Size

SELECTING APPROPRIATE FLEXIBLE SCOPE BRUSHES

TAKE THE GUESSWORK OUT OF CHOOSING BRUSHES

Ask about our Complimentary Brush Consultation

We can help you choose the most effective brushes for your Flexible Endoscope models from the variety of sizes and styles we offer.

Tips for choosing a brush:

1

Channels

Identify scope channels/ports requiring brushing for each model.

2

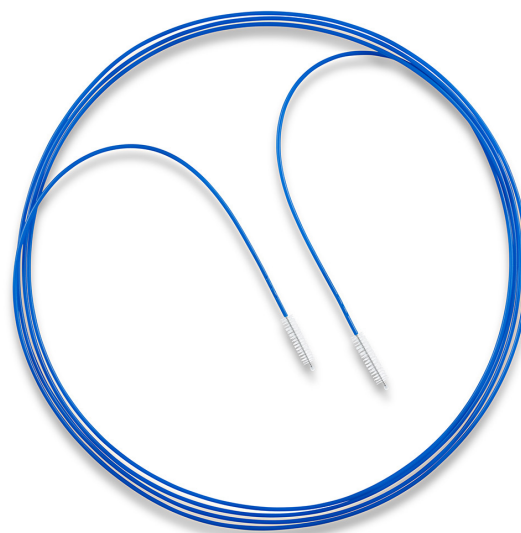

Technique

Consider brushing method required by MIFU - number of swipes; push or pull through.

3

Appropriate Size

CSA standards focus on brush size for proper channel cleaning and damage prevention.

Confirm channel specs of scope make/model are compatible with brush min/max channel diameter & length. Refer to the corresponding column in PMC product charts.

See following example...

SCOPE TYPE	WORKING CHANNEL	CODE	SHEATH COLOR	BRUSH DIA.	COMPATIBLE CHANNEL	LENGTH	SCOPE TYPE
