Notable Hospitality Projects 2000 - 2025

SLS Las Vegas – Provided consulting services, project management, and technical services to SBE Entertainment to provide infrastructure design and deployment of key systems throughout the hotel and casino over a two-year period. Once opened, we provided the 24/7 helpdesk and support services until the IT department was able to build and staff their own team.

Jenny Craig – Provided consulting services, center infrastructure design, and an international rollout of Jenny Craig Centers infrastructure to streamline operations, improved information movement, deploy a new POS environment, and allow the continued growth of organization. This multi-year project was written about extensively in CIO magazine as a model of a well-executed national rollout.

Wyndham International – Provided in depth consulting and design services, then managed the field deployment of a new Active Directory infrastructure for over 100 properties. Also provided custom in depth technical documentation and oversight of all field and remote helpdesk services to support this national deployment.

Wyndham Hotels and Resorts – Provided technical services, project management, and support to install new systems, make changes for ‘property conversions’, and assist with property datacenter projects for the entire Hospitality chain for many years.

Hilton Hotels Corporation - Designed and managed the system-wide deployment of a complete new IT solution for Hospitality to lower initial costs, maintenance, and on-going cost of ownership for the national hospitality chain that became the model for all hotel properties going forward. Provided the technical services, project management, and support to install systems in hundreds of Hilton Hotels and Garden Inns nationally.

Universal City Hilton and Towers – Provided 24/7 Helpdesk and Managed Services to replace a staff of five IT resources saving the property several hundred thousand dollars per year while increasing coverage, responsiveness, and expertise. This level of comfort led the property to contract with us to migrate the outdated internal mail system to Office 365, deploy an enterprise Backup and Replication solution, and upgrade both the failing PBX and WAN infrastructure.

SBE Entertainment – Contracted to Project Manage the SLS Hotel and Casino in Las Vegas. This two year project started with blue prints and a list of key vendors which included planning for the low voltage cabling, key vendor negotiations, planning and negotiating the opening Bill of Materials, onsite engineering services to build and configure all infrastructure systems, outsourced Help Desk, and Managed Operations until such a point that the property was ready and staffed to run on its own. The project opened on schedule and under budget.

Plus many others...
