

Cloud Communications

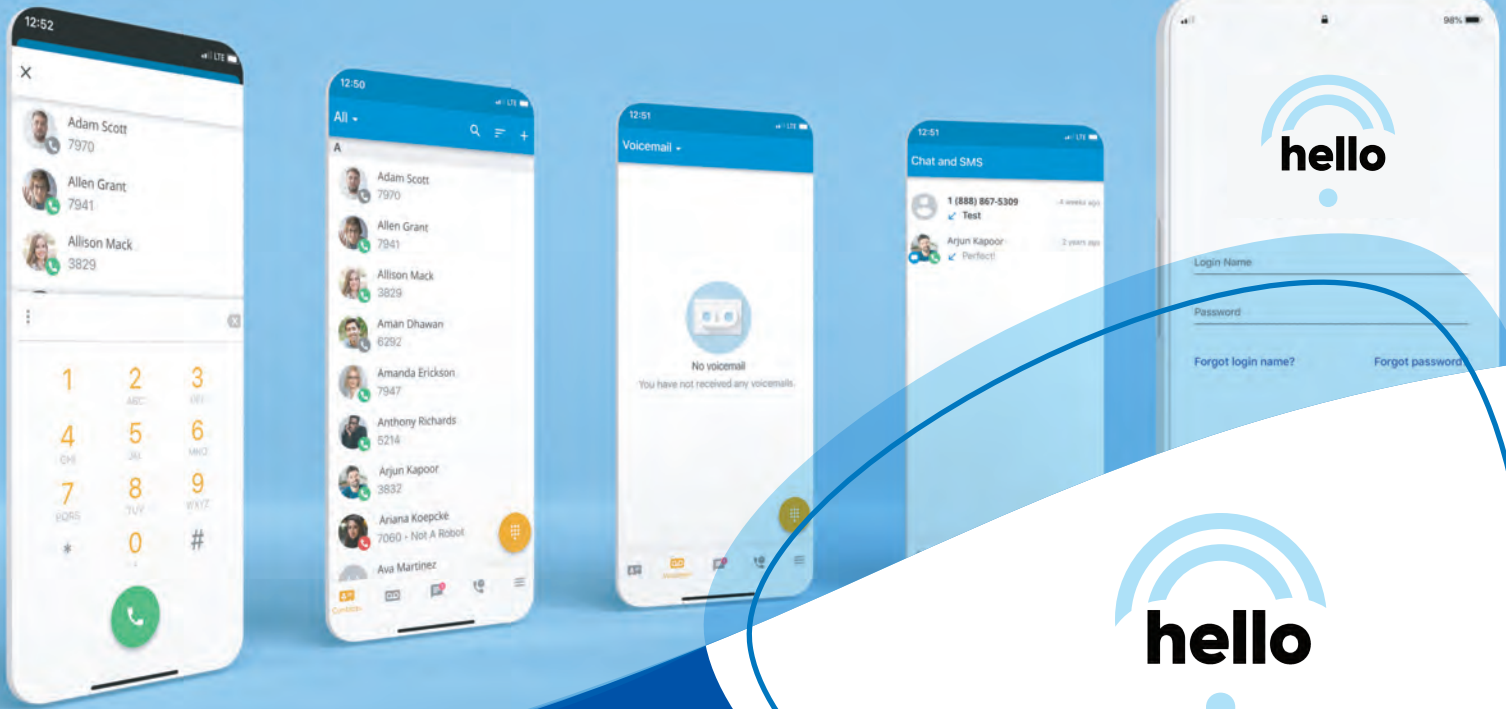

67% of organizations are moving a significant portion of their communications solutions to the cloud ^[1]

Why Move To A Cloud Solution

Advances in phone system technology and rapid remote work adoption mean your existing phone system may no longer meet your business needs. Recognizing the demand for a better solution, TA Networks offers a simple and painless way to transition to a cost-effective and feature-packed cloud-based solution.

Advanced Capabilities Await You

Cloud Communications allow your business to have the same sophisticated features as the larger players in your industry. A hosted solution enables advanced capabilities that empower you to boost employee productivity, improve your customer service, facilitate seamless scalability, and increase flexibility.

hello

Unbeatable Benefits

Improve Operations

Unified Cloud Communications reduces the complexity of integrating and coordinating a wide range of communications channels and applications by uniting them under a single interface for employees to work and collaborate more productively.

A study found that using Unified Communications tends to speed up problem resolution and increase worker productivity, which can help an organization stay on top of its game. [2] A Cloud Communications solution is highly scalable and saves you money by:

Providing added cost-efficiency with the ability to scale up or down at the drop of a hat, depending on your specific requirements.

Eliminating the need to predict the future and pay for services not currently required by your business. Instead, you can choose only the features you want right now.

Access Anywhere

Employees can access their Cloud Communications at home to work without skipping a beat if they are prevented from going to the office.

Reduce Costs

Business-class phone services can drastically reduce costs — by up to 40% over traditional phone services.

Mobile Capabilities

Mobile functionality allows you to turn any internet-capable device into your phone with our browser-based softphone and mobile applications.
