# Setting the Stage: Basic Issues in Education in sub-Saharan Africa (SSA)

# Education Landscape & Challenges in a “VUCA”

World  
Pre-COVID-19 era      COVID-19 era      Post-COVID-19 era  
 (“Pandemic Age”)

## “KNOWN KNOWN”

- ✓ Access
- ✓ Cost
- ✓ Quality
- ✓ Relevance
- ✓ Quality

## KNOWN UNKNOWN

- ✓ Educational system effect
- ❖ Resilience
- ❖ Responsiveness
- ✓ Collateral effects (e.g. psycho-social)

## “UNKNOWN UNKNOWN”

“Whole society” and potentially stronger intersectoral effects

\*VUCA: volatility, uncertainty, complexity, and ambiguity

# Tertiary education is key in national and global developmental agenda & transformation

As the world seeks to build back better into a new era of green and equitable economic growth, **tertiary education systems are at the heart of the big transformations required throughout economies and societies. Tertiary education is vital for the development of human capital and innovation.** Strategic and effective investments in tertiary education can serve every country – from the poorest to the richest – by developing its talent and leadership pool, generating and applying knowledge to local and global challenges, and participating in the global knowledge economy” – World Bank, 2022

# Tertiary Education and Its Impacts

Tertiary education contributes to social and economic development through four major missions:

- Formation of human capital (*primarily through teaching*);
- Building of knowledge bases (*primarily through research*);
- Dissemination and use of knowledge (*primarily through interactions with knowledge users*);
- Maintenance of knowledge (*inter-generational storage and transmission of knowledge*).

# Tertiary Education and its Challenges in SSA

**Tertiary Education system in SSA has expanded but faces critical challenges:**

- Inadequate funding
- Quality and global competitiveness
- Equity issue
- Link with the industry/labour market
- Relevance & research impact

# Education in sub-Saharan Africa: *Sobering legacy, and Persisting Challenges:*

## An Overlooked Issue: ... The Mental Health Dimension

# Tertiary Education Contributes Positively to Mental Health

The availability of tertiary education, including universities, vocational schools, research laboratories, and nursing schools, is a staple of developed, high-functioning societies. The 2030 Agenda for Sustainable Development declared that education is the key for achieving all 17 Goals outlined in the report (UN General Assembly 71st Session, 2017). The transition from developing to developed countries comes in conjunction with tertiary education, as well-educated people are more equipped to deal with economic shock, are more employable, and more likely to facilitate innovation in their home country (The World Bank, 2017). Tertiary education has proven to be essential for the sustainable development of both the individual and society - *World Bank, 2017*

# Education & Mental Health: The “Dark” Side

**“The current status of our university students’ mental health is nothing short of a tragedy.**

Learning — in its truest essence — is supposed to be a fulfilling life-long journey of exploration, discovery, and self-improvement.... There are so many global grand challenges, calling out to young leaders and innovators to solve them. But how many of us can say that for the most part, our formal education was exciting, fulfilling and empowering? How many of us would come home from school or university feeling invigorated? How many of us were truly happy at school?”

# How Education System is Failing Mental Health

# Fundamentals: Mental Health in Sub-Saharan Africa

# Mental Health.....

- Mental health is a state of mental well-being that enables people to cope with the stresses of life, to realize their abilities, to learn well and work well, and to contribute to their community. Mental Health is an integral component of health and well-being and is more than the absence of mental disorder – WHO, 2022
- Mental health includes our emotional, psychological, and social well-being. It affects how we think, feel, and act. It also helps determine how we handle stress, relate to others, and make choices – CDC

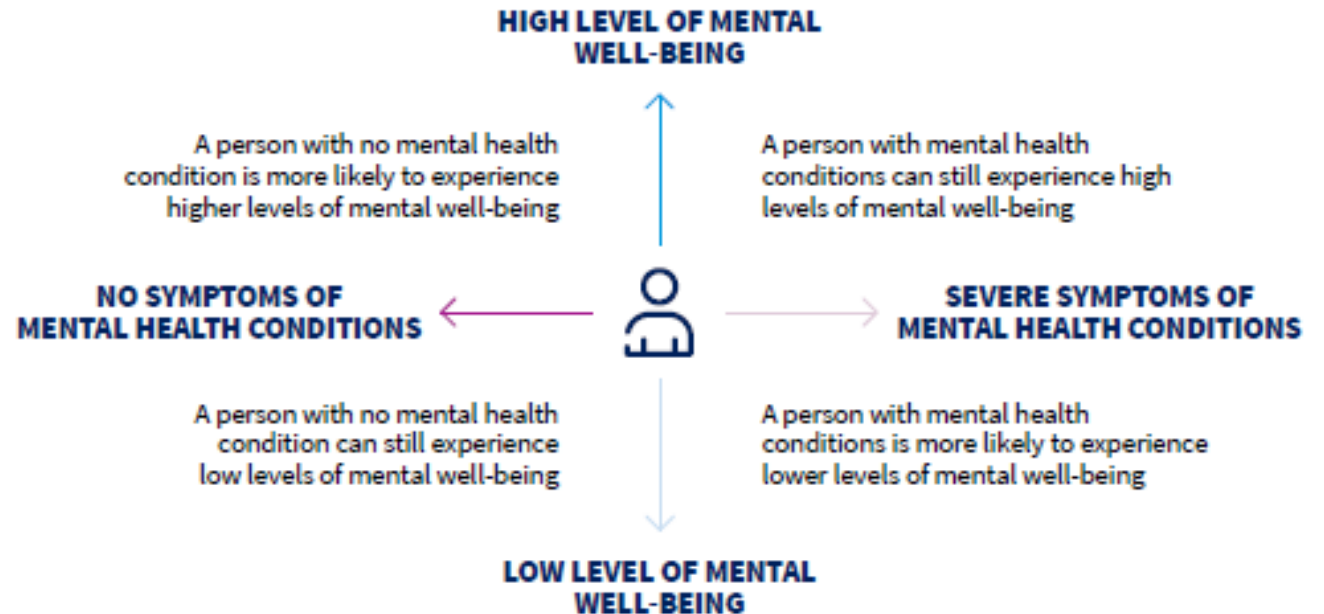

# Mental Health is NOT a Binary State .... It Exists on a Complex Continuum

Mental health is not a binary state: we are not either mentally healthy or mentally ill.

Rather, mental health exists on a complex continuum with experiences ranging from an optimal state of well-being to debilitating states of great suffering and emotional pain.

So mental health is not defined by the presence or absence of mental disorder

– WHO, 2022

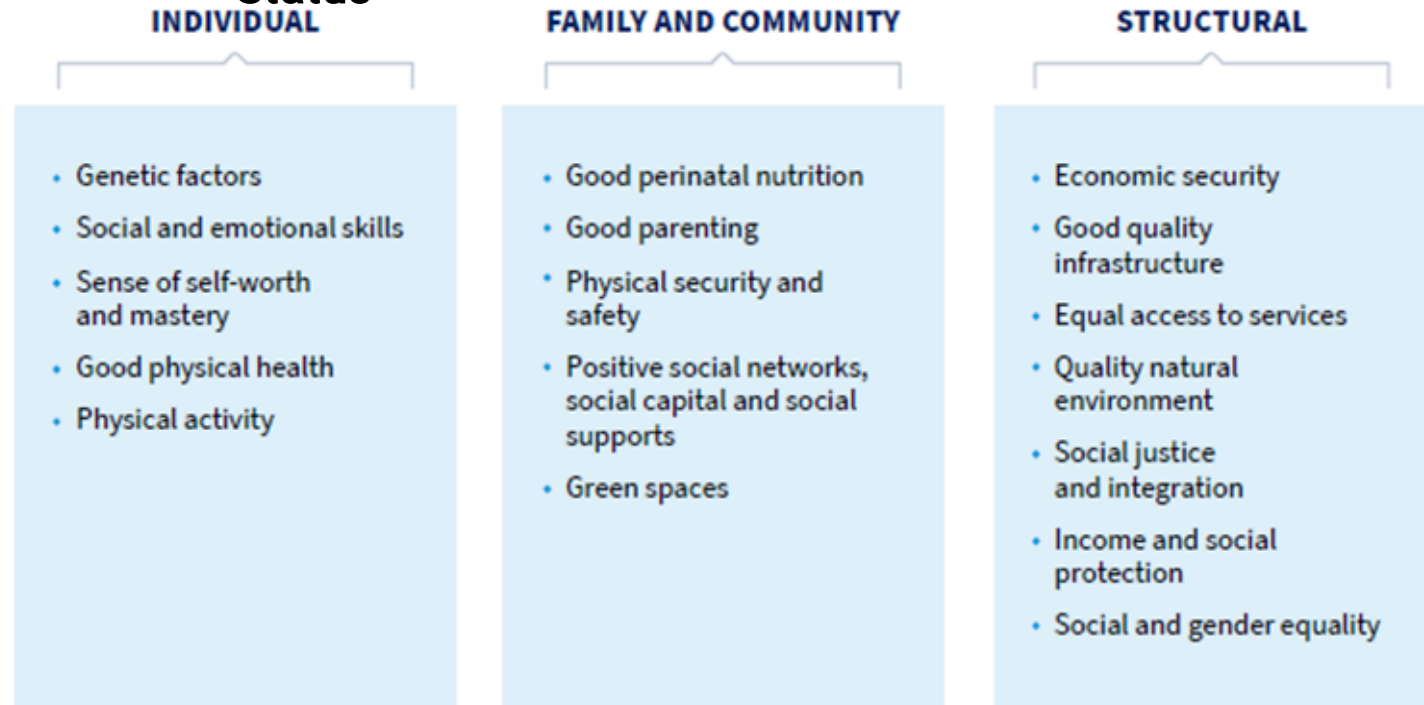

Relationship between mental well-being and symptoms of mental health conditions

# Mental Health Matters

- 13% of global population (about 970 million people in 2019; 52.4% females) living with mental disorder
- Prevalence of mental disorder in Africa was 10.9% in 2019
- Mental Health is a leading cause of death and disability, and poor functioning

## Multiple Factors Contribute to Mental Health Status

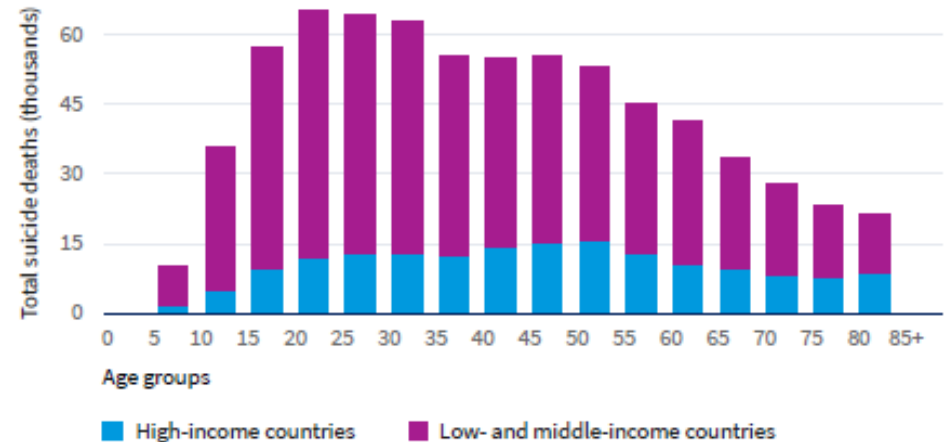

# Mental Health: Adolescence is a Critical Period

- Most mental health conditions in adults have their onset by adolescence.
- Adolescence is a developmentally sensitive time for mental health & a crucial period for developing the social and emotional skills, habits and coping strategies
- Many risk behaviours, such as substance use starts during adolescence.
- Suicide is a leading cause of death in adolescents (contributes about 8% of adolescent deaths globally).

## Abstract

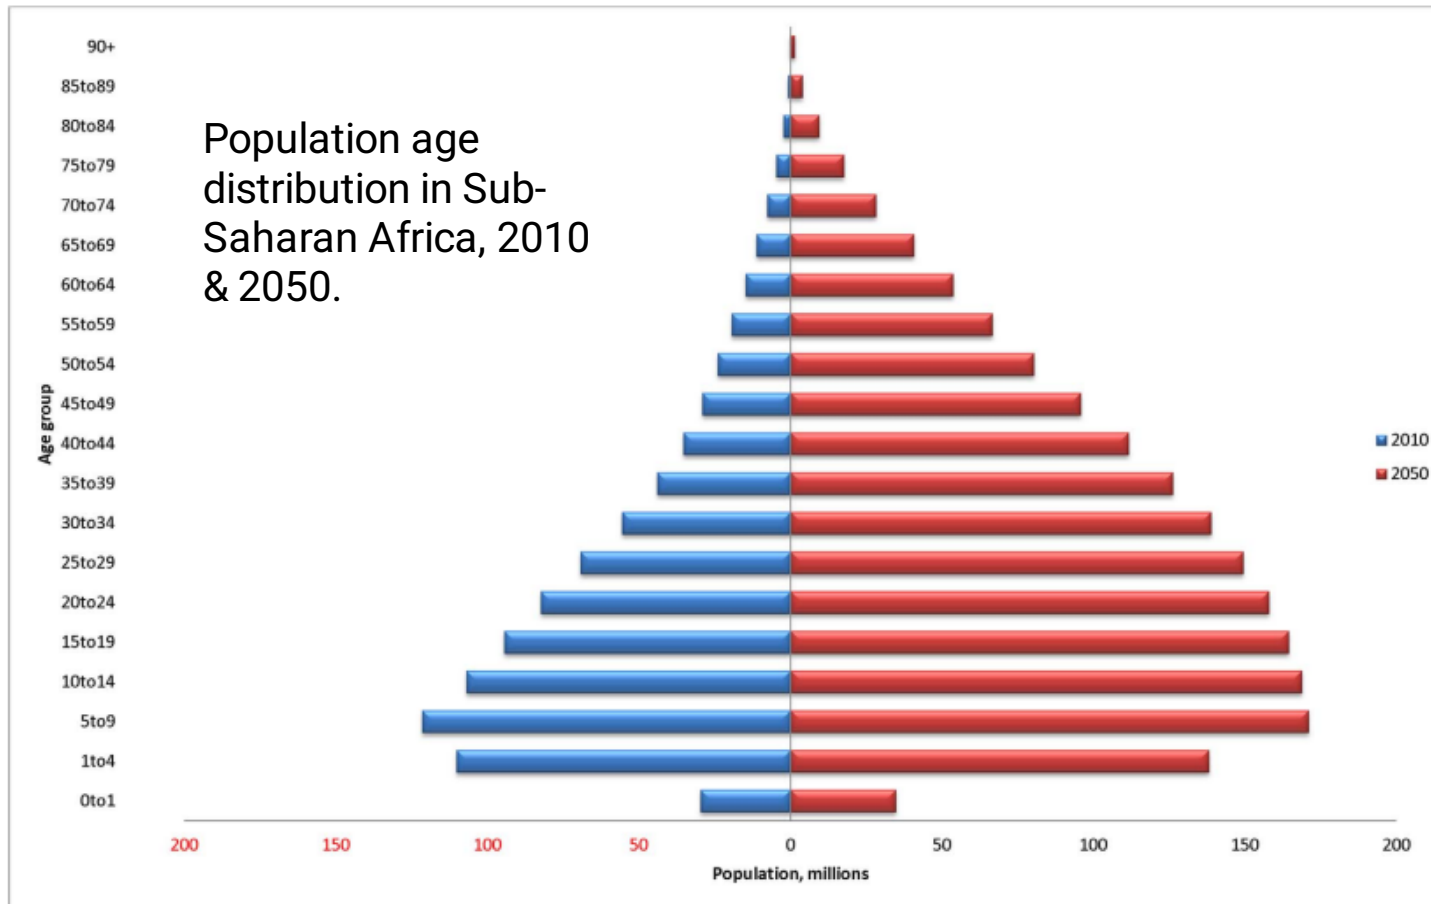

The world is undergoing a rapid health transition, with an ageing population and disease burden increasingly defined by disability. In Sub-Saharan Africa the next 40 years are predicted to see reduced mortality, signalling a surge in the impact of chronic diseases. We modelled these epidemiological changes and associated mental health workforce requirements. Years lived with a disability (YLD) predictions for mental and substance use disorders for each decade from 2010 to 2050 for four Sub-Saharan African regions were calculated using Global Burden of Disease 2010 study (GBD 2010) data and UN population forecasts. Predicted mental health workforce requirements for 2010 and 2050, by region and for selected countries, were modelled using GBD 2010 prevalence estimates and recommended packages of care and staffing ratios for low- and middle-income countries, and compared to current staffing from the WHO Mental Health Atlas. Significant population growth and ageing will result in an estimated 130% increase in the burden of mental and substance use disorders in Sub-Saharan Africa by 2050, to 45 million YLDs. As a result, the required mental health workforce will increase by 216,600 full time equivalent staff from 2010 to 2050, and far more compared to the existing workforce. The growth in mental and substance use disorders by 2050 is likely to significantly affect health and productivity in Sub-Saharan Africa. To reduce this burden, packages of care for key mental disorders should be provided through increasing the mental health workforce towards targets outlined in this paper. This requires a shift from current practice in most African countries, involving substantial investment in the training of primary care practitioners, supported by district based mental health specialist teams using a task sharing model that mobilises local community resources, with the expansion of inpatient psychiatric units based in district and regional general hospitals.

**Citation:** Charlson FJ, Diminic S, Lund C, Degenhardt L, Whiteford HA (2014) Mental and Substance Use Disorders in Sub-Saharan Africa: Predictions of Epidemiological Changes and Mental Health Workforce Requirements for the Next 40 Years. PLoS ONE 9(10): e110208. doi:10.1371/journal.pone.0110208

Sub-Saharan Africa is estimated to have an increase of about 130% in its burden of mental and substance use disorders between 2010 & 2050

# Population Continues to Grow Rapidly in the Midst of Increasing Poverty – largest Cohort of Young People with Uncertain Future

Rapid population growth rate & the associated socio-economic trends are mental health stressors

# Substance Use is an Increasing Challenge Especially among Young people & in Campus Settings

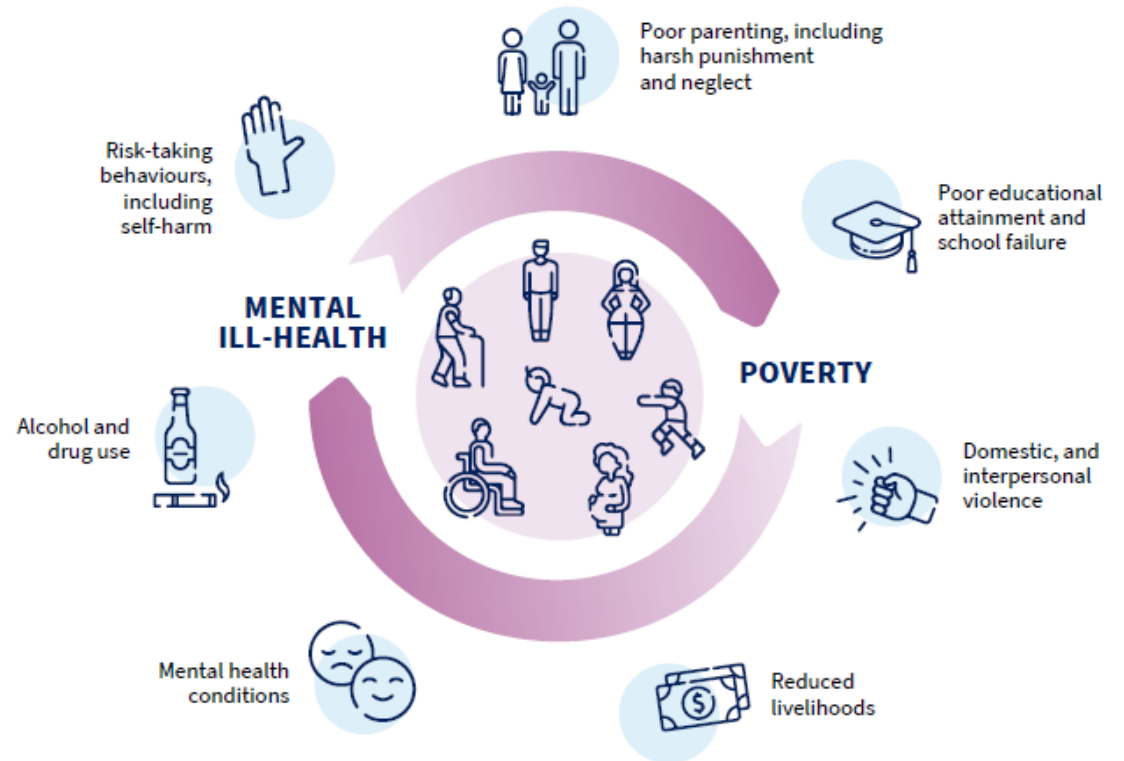

The availability of more potent drugs, the increasing number of substances and their consecutive or sequential use among occasional or regular users pose a greater challenge to the prevention of drug use and the treatment of drug use disorders than in the past – UNODC, 2021

# The prevalence of risk factors for mental health disorders is generally growing in SSA

- Poverty
- Humanitarian situations
- Drug use
- Domestic & interpersonal violence
- School-related violence
- Disease outbreaks & disasters

The vicious cycle between poverty and mental ill-health exacerbates mental health conditions

# Mental Health **RESPONSE CAPACITY** in SSA

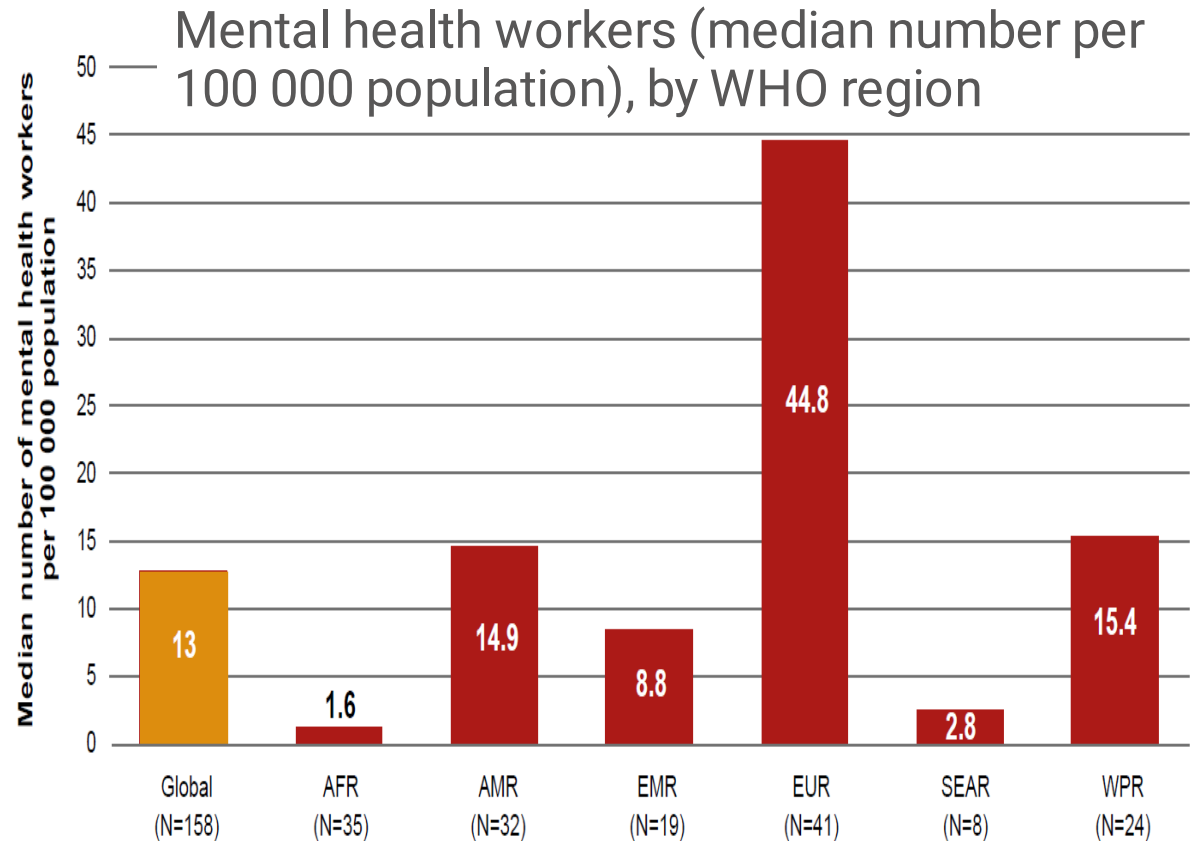

# MENTAL HEALTH ATLAS

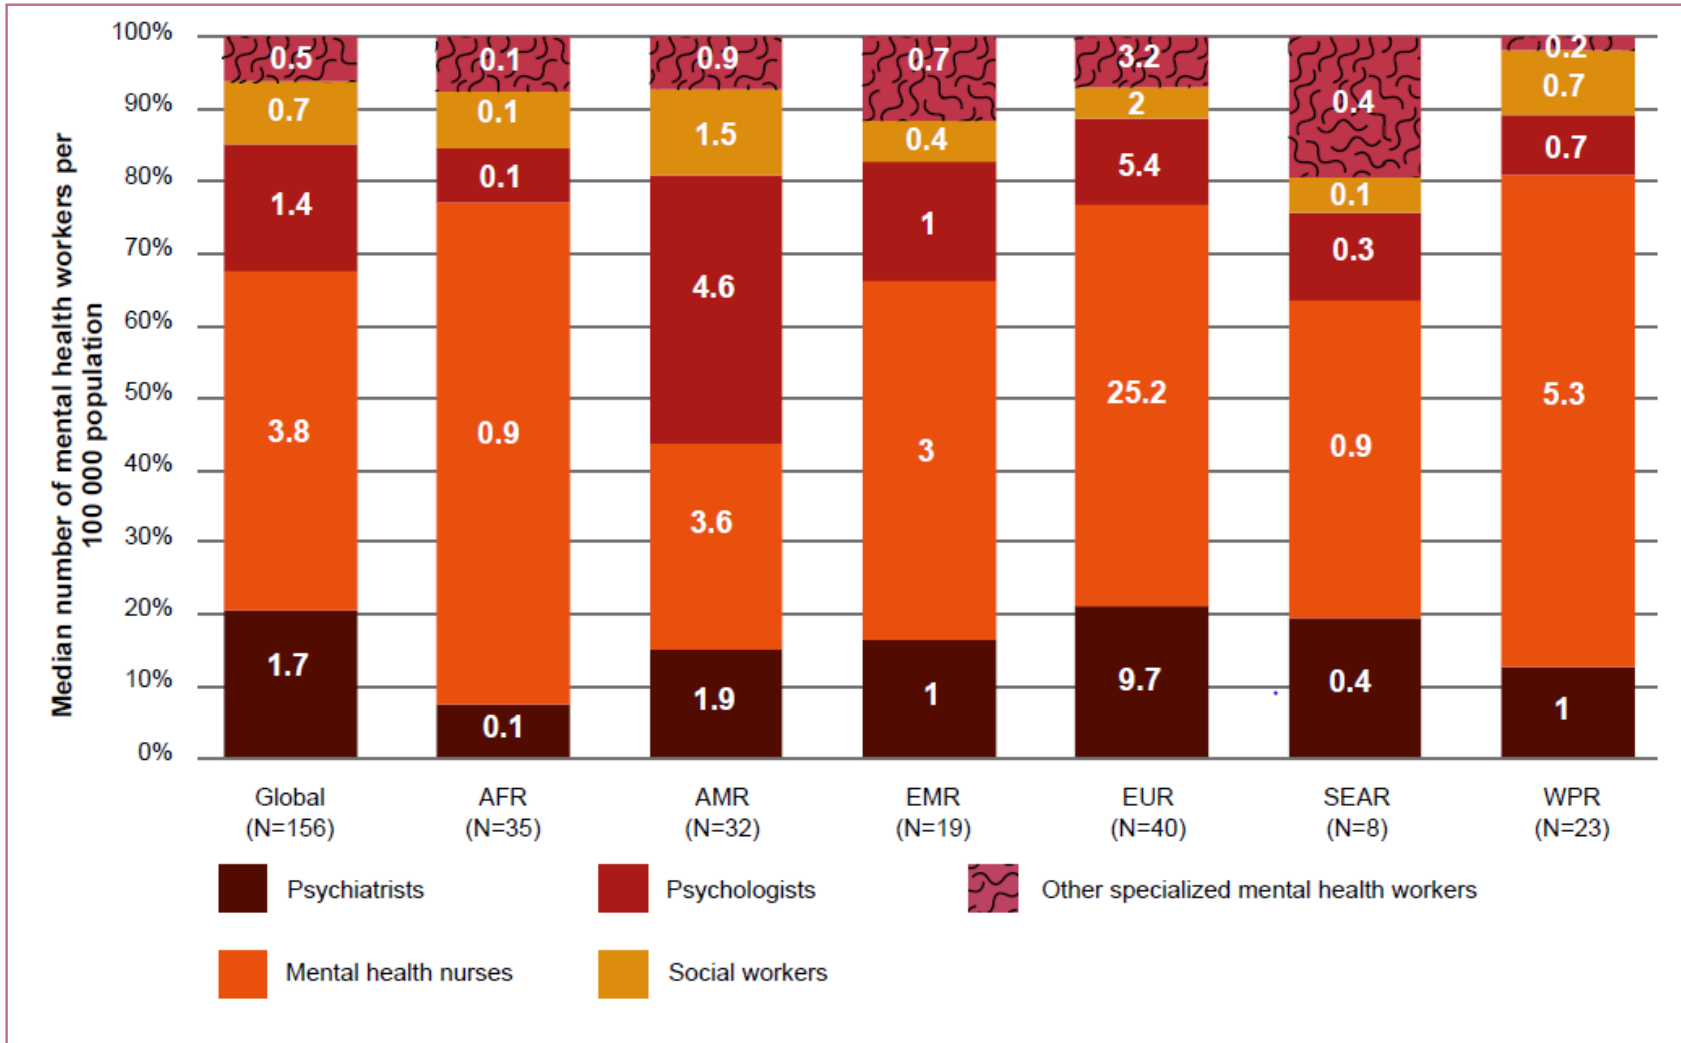

## 2020

## Africa has the Lowest Mean Number of Mental Health Workers per 100,000 Population among the Regions

Breakdown of mental health workforce (median number per 100 000 population), by WHO region

## Median number of health workers in child and adolescent mental health services per 100 000 population

	Number of responding countries	Median number of health workers
<b>Global</b>	<b>122</b>	<b>3.4</b>
<b>WHO region</b>		
<b>AFR</b>	26	0.2
<b>AMR</b>	22	8.6
<b>EMR</b>	14	1.0
<b>EUR</b>	35	12.5
<b>SEAR</b>	8	0.9
<b>WPR</b>	17	0.8

## Africa Lacks Many Categories of Mental Health Workers Despite Expanded Tertiary Education Landscape

“The mental health workforce for children and adolescents across different cadres...was scarce or non-existent for some categories such as speech therapists, occupational therapists and other specialized mental health workers.”

# Availability of Mental Health Services in Africa is one of the Poorest among the World's Regions

\*% fulfilling at least 4/5 WHO indicators

Availability of treatment facilities (hospital & outpatient)			
Median number per 100,000 population			
	Hospital Facilities	Hospital Beds	Outpatient facilities

**BUT** Care is  
Lacking

# Shaping the Future: Making Education Count for Mental Health

# URGENTLY NEEDED: Reorienting HEI's Mission to Advance Mental Health in SSA

- **Teaching:** *Build relevant capacity of teachers/lecturers, students & school community for competency in mental health literacy; address areas of gaps in human resources for mental health*
- **Research & Research Dissemination:** *Give greater attention to mental health issues, the associated factors & effective responses*
- **Services:** *Use HEIs' platforms to reach the children in primary and secondary schools & the community to enhance mental health protective factors and competencies*

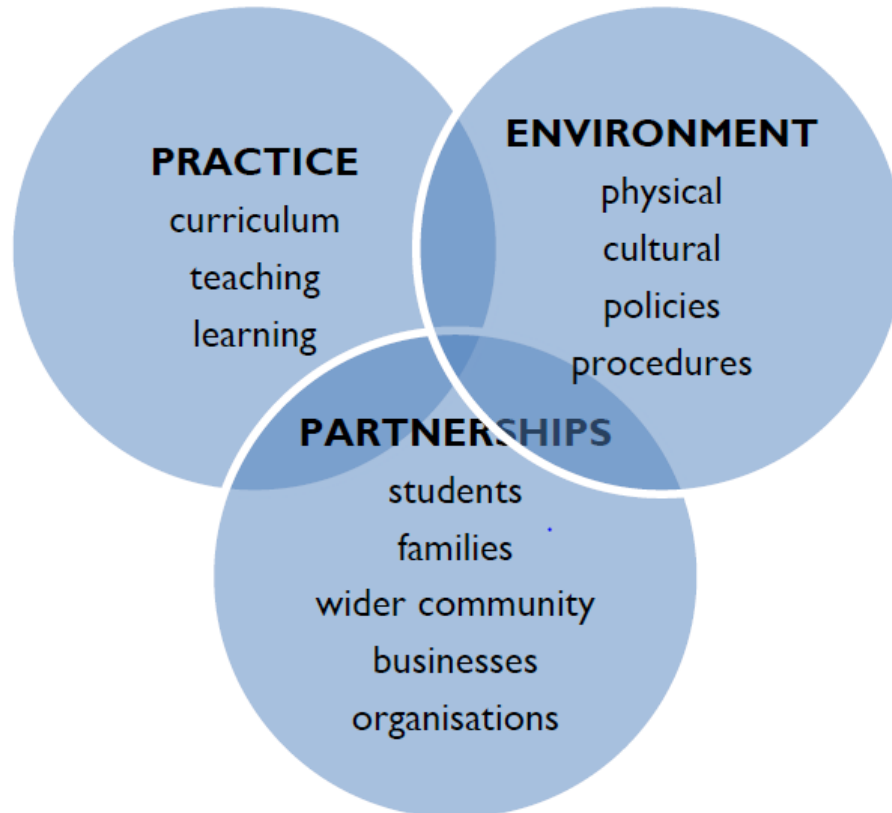

# Africa Needs to Passionately Embrace “Health-promoting Education System” Agenda

# THE UNIMED EXAMPLE

1. **PREVENTION & PROMOTION:** Drug Education PLUS Drug-testing policy that identifies substance users early and link them with treatment and care
2. **CAPACITY-BUILDING:** Established Nigeria's 1<sup>st</sup> Faculty of Medical Rehabilitation & FIVE prgs (including 1<sup>st</sup> Bachelor of Occupational Therapy, Audiology & Speech Therapy)
3. **COMMUNITY-BASED PRG:** Sustainable home-grown community health model
4. **SCHOOL-TARGETED FOR SCHOOL PUBLICS:** Potential for Enhancing Protective Factors
5. **ACTION RESEARCH:** To generate

Conclusion

Conclusions

# Conclusion & Call to Action

“Mental health is critically important to everyone, everywhere. All over the world, mental health needs are high but responses are insufficient and inadequate.”

The education sector CAN & SHOULD play a leading and catalytic role in advancing the agenda for improved mental health in Sub-Saharan Africa

Let's Start the journey today : NOW is the Moment

The best time to  
plant a tree was  
20 years ago.  
The second best  
time is now.
