Conclusion

The treatment demonstrated that precise intradermal delivery with MicronJet™ enabled effective and well-tolerated neck rejuvenation with minimal downtime and no bruising. Following four treatment sessions, the patient experienced visible improvement in skin texture and softening of neck lines, with results becoming noticeable within 2–3 months.

The controlled and minimally invasive delivery approach contributed to high patient satisfaction and a comfortable recovery experience, supporting the value of MicronJet™ as an effective platform for aesthetic intradermal treatments.

About Dr. Barbara Kubicka, MD, CIME\ICAM, MBCAM

Dr. Barbara Kubicka is the Founder and Lead Aesthetic Physician of Clinicbe® in Knightsbridge, London. She specializes in regenerative and minimally invasive aesthetic treatments, with expertise in skin rejuvenation, collagen stimulation, mesotherapy, PRP/PRF, and advanced skin quality treatments.

After graduating from Warsaw Medical University, Dr. Kubicka completed postgraduate training in Aesthetic Medicine in Paris and gained clinical experience within Imperial College London-affiliated NHS hospitals. Her holistic approach combines aesthetic medicine with long-term skin health and overall wellbeing.

***Please read the IFU before use and for additional information on indications, contraindications, warnings, and precautions.**

** The use of each substance for intradermal injection must comply with the applicable regulatory approvals and requirements in the respective country or region.

***Dr. Kubicka received financial support from NanoPass Technologies LTD. for this case study.
