

**EDUCATIONALLY PROVEN
INSTRUCTION TECHNIQUES**

In selecting the instructional tools to maximize high stress recall, promote asocial stress precursors and use the latest in both tactile neural linguistics methods and the latest researched educational methodology in flow dynamics and ekstasis state performance research.

By doing this we are able to achieve a higher learner absorption and retention rate in addition to a rapid learning curve and an exceptional internal motivation for active pursuit of material mastery.

ALL RANGES-ALL OPTIONS

Whether fighting on the ground, standing, facing armed assailants with edged weapons, blunt force weapons, or firearms, the principles **DO NOT CHANGE**.

Additionally, using our principles and SAV/BOR knowledge base increases the ability to employ multiple close range weapons with devastating impact.

The **TAC2™ SYSTEM** allows edged weapons, blunt force weapons, e-tool, bayonet and firearms to be integrated without changing the understanding of trauma induction making officers both more survivable and more capable of defeating the per-

...Because SURVIVAL is NOT a SPORT!

Gain control of any ECQ event immediately

Learn to employ proper mechanics, proximity rules

ELIMINATE lost man hours through training injuries & maximize training time efficiency

Multiple Assailant Capable

Extreme Close Quarters Capable

Use of research driven educational techniques ensures INCREASED retention under high stress

Accelerated Learning Curve

Increase ECQ muzzle control and minimize target penetration risks

Defeats Extreme Close Quarters (ECQ) Weapons Threat/Enhances weapons use

Intrinsic mental rehearsal increases efficacy

Enhance transition angles to and from weapons in ECQ encounters

Our mission...

We teach military grade, field-tested combatives adapted to allow “ramping down” from assumption of deadly threat premises to suit the scenario and fulfill the obligations of today’s multi-role law enforcement and corrections community. Whether it involves tactical assaults, riot control, covert operations, daily threats from interacting with the public or the new trend of targeting police in ambush, response in any setting where close quarters/ extreme close quarters engagement may occur our system will enhance the confidence and capabilities of those on the street.

We concern ourselves with that faction of combatives where imminent threat in ECQ settings with restrictive rules of engagement may be encountered by our men and women in uniform. We know that the deployment of defensive or lethal weapons options may not be feasible given the distances and populated locations at which many of these encounters occur with special consideration of the politically sensitive nature in which events occur. The **TAC2™ SYSTEM** takes away the assailant’s ability to act with exceptionally fast event control skill sets that can adapt from or to weapons, engage multiple attacker settings and win, bringing the officer home and stopping asocial felons.

Because **SURVIVAL** is **NOT** a **SPORT**

IMMINENT THREAT DEFENSE SYSTEMS: THE TAC2™ SYSTEM

The **TAC2™ SYSTEM** is our proprietary **Combative Reaction-induction Assault Sciences Hybrid**. This means it is designed to be 100% offensive, and 100% effective **IN ANY CQ/ECQ SURVIVAL SETTING**. Using proven tools to cause predictable trauma to the human body that renders it impossible for the enemy to act offensively, the **TAC2™ SYSTEM** eliminates the idea of competing with an offender and truly delivers domination in all aspects of the hand-to-hand arena.

All of the tools we employ are gross motor and have been used by most other sport-based martial art and fighting systems. It is the methodology of the Ancient Spartans and the principles we derive from Traditional Military Spartan Pankration, FMA, JKD, BJJ, and others, coupled with an exhaustive researching of human physiological response to trauma stimuli, that sets these tools apart creating a devastating system of hand-to-hand combatives which integrates sidearms and any other tools carried by the officer, rather than a sports-based, competitive model. Size and speed are no longer dominant factors, replaced by **INTENT** and SAVs knowing that **ONLY RESULTS MATTER**. The **TAC2™ SYSTEM** delivers reproducible results for **ANY** practitioner with the application of three simple rules.

Focusing on the reflexive responses of the body, the **TAC2™ SYSTEM** uses trauma that triggers the spinal, somatic, and visceral reflex physiology to induce reflex giving predictable, specific responses that enhance officer control. When required, lethal capabilities are immediately available, with active control of the conflict beginning **RIGHT NOW**. This facet of control through induction allows a ramp-down approach which can be adapted to non-lethal settings as needed, making it rapidly adaptable and capable of tailoring within mission specific guidelines.

Use of sidearms with the **TAC2™ SYSTEM** follows the same principles as any justifiable deadly force encounter and we teach aggressive weapons retention, specific targeting for reflexive response, partner-in-contact shooting skills, instinctive ECQ shooting hacks that increase accuracy without getting on your sights, directed contact shooting, using your sidearm in ground fighting, and angling to prevent bystander casualties.

TAC2™ SYSTEM PRINCIPLES

The **TAC2™ SYSTEM** operates on three simple principles and requires no specific prior skill set to be effective. The use of the principles in conjunction with Specific Attack Vectors will yield structural incapacitation to be accomplished rapidly in our “RAMP-DOWN” force continuum.

This is a simple 3 step system that can eliminate disparities between size, strength, speed and training time. It will increase shot placement efficiency and give officers more options to survive in Justifiable Deadly Force events

TEACHING RATIONALE AND DISCLAIMER The course curriculum, including concepts, skill sets and specific tactical application examples are intended to allow you to defend against LIFE-THREATENING, VIOLENT attacks. Misuse of this information and its misapplication can cause serious, permanent bodily harm or death to the person to whom you apply it.
