

Dose Medicine Safely

Not all pain and fever medicines are the same. It's important to understand the differences. Help your child feel better safely.

Read the label

Active ingredient: which ingredient makes the medicine work

Uses: what the medicine treats

Directions: how much to give, and how often

Give the right amount

- If possible, use your child's weight to dose instead of age
- Always use the dosing device (cup, syringe, or dropper) that came in the box

Choose the right medicine

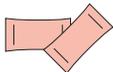

TYLENOL® and MOTRIN® come in a variety of kid-friendly forms and flavors. Choose the one that's best for your child's age, weight, and preference (see dosage chart on the back of this sheet):

- **Liquid:** easy to swallow

- **Chewable:** for kids 2-11 years old who don't like liquid

- **Dissolve packs** (only available for TYLENOL®): portable powder for children 6-11 years old

Check the time

- Follow directions on the package when dosing your child's medicine
- If you forget a dose, give it as soon as possible, then wait the recommended time before giving the next dose

Never give aspirin to children!
It can cause a serious illness called **Reye's Syndrome**

TYLENOL® Active ingredient: acetaminophen	MOTRIN® Active ingredient: ibuprofen
<ul style="list-style-type: none"> • Starts to reduce fever quickly • Reduces pain and fever while being gentle on tummies • For children 6 months and younger, talk to your healthcare professional 	<ul style="list-style-type: none"> • Treats pain + fever • Works fast and lasts up to 8 hours • Can be used for children 6 months and older
