

## Chemistry Issue

The Town of Chesterfield water department has been working side by side with the Department of Health and the Essex County Deputy Superintendent of Public Works. They have concluded, to the best of their knowledge that, although the water looks unsightly, it is safe to use as it is a coagulant concentration issue that they have resolved as of March 3<sup>rd</sup>. The reason for the chemistry issue is due to cleaner raw water now being drawn to the plant. The intake in Butternut Pond was extended to deeper and therefore, cleaner water, which requires less chemical to “clean” the particles out. The water department will start flushing hydrants on March 4<sup>th</sup>. Due to the weather, some hydrants are inaccessible, but the department will methodically flush to the best of their ability. As stated before, the water is safe to use. Some people have had issues with the water staining their cloth, and if that is experienced, if at all possible, avoid laundering with this water source until we have fully resolved the issue.
