2nd Story Flooring

Underlayment

Decking overlay

Roof Decking

Structural I-Beam

Ceiling & Lights

Ceiling Cap & Trim

Floor Track
24ga steel,
aluminum opt.

Vinyl Base

Wiring Stud
5 steel or aluminum options,
load- & non-load-bearing

Corner Post
3070 Steel Door
20ga, insulated, sweep,
hinges, key-in-knob lockset

Modular Units built to expand space & customized to fit function

InPlant Offices, Incorporated (InPlant) manufactures the widest product range in Modular Building Systems. InPlant's systems are available in 1 3/4" or 3" thickness aluminum or steel. Based on the environment and purpose of your Modular Unit, InPlant will customize a Modular Office, Enclosure or Booth for you. Consider structural options:

- Maximize your space with clear spans up to 40' wide in non-load bearing applications,
- Expand vertically with a second story, or
- Add storage or a production area with a load-bearing roof — load capacities up to 125 lb per square foot.

InPlant's Wall Panels include diverse qualities — outer surfaces and inner core options are designed for safety, environmental control, Noise Control or Soundstop barriers. Depending upon use, you may select from a wide variety of prefabricated Wall Panels with standard finishes or custom paint colors. You may also request fabrication using custom materials. InPlant's durable materials provide years of maintenance-free use. Call for assistance, and our staff will explain the details of our various Modular Building Systems.

Prefabricated modular construction saves money & increases flexibility

Since InPlant's Modular Units are fabricated and painted in the factory, the installation and assembly are cleaner than traditional construction and require less downtime, saving you money. Tax advantages also make modular construction an economical choice (Refer to IRS §179).

Modular construction is open construction, which allows building inspectors to check the structure and wiring at any point of the installation process.

The non-progressive design of InPlant's Modular Systems, allows for change and growth. By using InPlant's modular flexibility to expand, reconfigure or relocate your structure, you'll lower future spending and maximize your investment.

Customizing prefabricated Modular Building Systems to fit your needs.
