

"Save"ty[®] Yellow Products

"Save"ty "Back of Rack" can put a stop to "PALLET PUSH THROUGH"

"Save"ty Yellow Back of Rack is designed to stop employees from pushing a skid off the back of the rack.

It is stocked in 8' sections covering two pallet positions. It can be used in a back-to-back rack design to protect product damage.

- High tensile steel brackets are 3/16" material and are bolted to frames.
- Strong horizontal braces are secured in place with a 1/2" thick pin.
- Cut installation costs in half because there is no need for heavy netting, or the extreme hassle of netting installations.
- Low maintenance compared to broken straps, broken mesh panels and torn netting.
- Bracket measures 6" off the frame.
- This 10 gauge thick brace is 4" tall, 98.5" in length and is formed into a "C" channel for strength. See side profile above.
- Two braces meet in the center of the bracket.
- The 3/16" thick bracket holds two braces and mounts through the side of the rack frame.
- 1/2" bracket hardware included.
- 1/2" thick pin drops into bracket and secures bracket.
- Use multiple braces for loose carton areas.
