

**Aussie Base Station - Dual Cab Fuso Canter with Northern Lite 10-2LE with Basement Tray built into camper.**

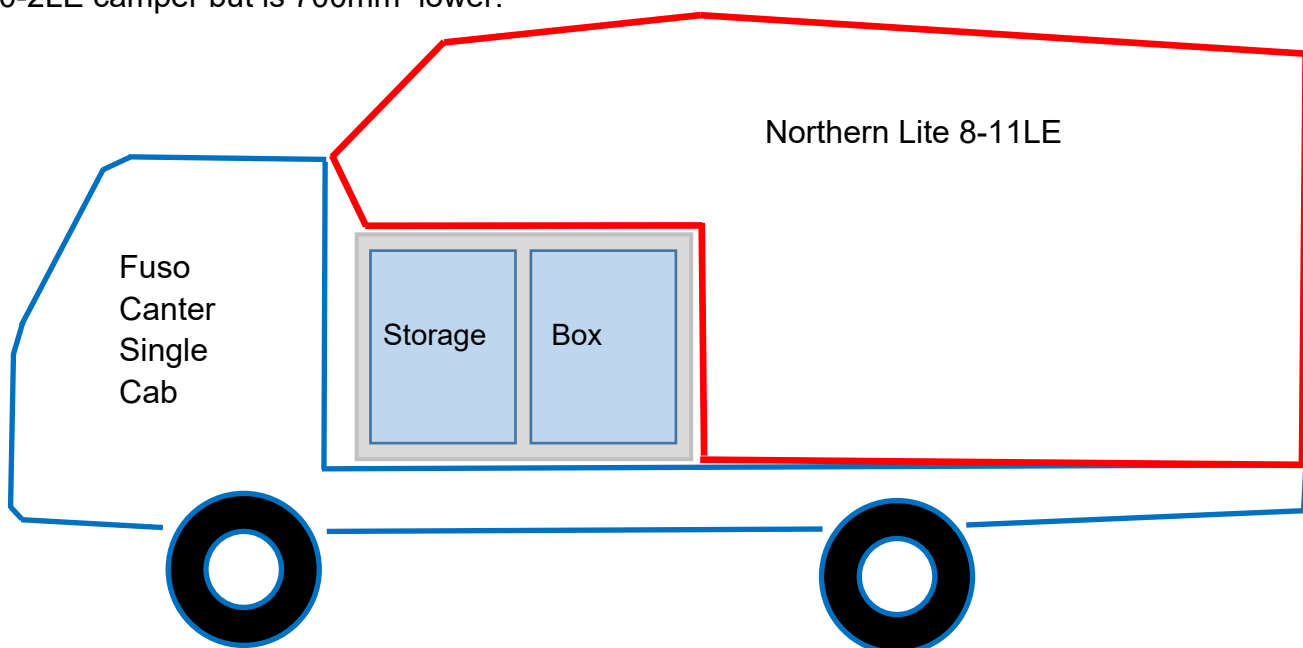

The original Aussie Base Station, was made with the Basement built on to the camper. We now build the basement onto the truck tray or even as a separate unit that can be removed from the truck if required. The drawing below gives indicates the basement as a separate unit. This configuration is lighter and allows more weight to stay on the tray when the camper is unloaded as all these trucks tend to 'ride rough' with no load. It also makes it easier to load and unload the camper.

The Northern Lite 8-11 LE option has the advantage of being 300mm lower and fits on a 9 foot tray which is 2 foot shorter than the 10-2 LE. We do not fit the second side awning on this model.

With a single cab Fuso Canter you can fit the entire 8-11LE Camper on the tray which further reduces the overall height. The storage box is more user friendly than the basement and can be built to your specifications. The length of the whole unit is much the same as the dual cab with the larger 10-2LE camper but is 700mm lower.

Of course you can substitute the Isuzu NPS or Hino trucks if you wish. I just like the Fuso, they are good to deal with.
