# INTRODUCTION

## Rain Chains Are Artistic Downspouts™.

Rain chains drain water from your gutter to the ground like a waterfall. They are beautiful and they sound great! Rain chains make a terrific and unique gift—every home is beautified by these elegant outdoor accessories, and they are easy to install.

Our products are of the highest quality, the best workmanship, and the thickest materials. Nearly 100 designs to choose from: links, cups, and design combinations in pure copper, aluminum, stainless steel and brass.

We gladly accommodate special orders and large orders. Every product can be sold by the foot. Order exactly the lengths you need!

Our rain chains come with a **LIMITED LIFETIME WARRANTY.**

# CUP STYLES

Cup designs offer the highest performance and efficiency. The connected, open-bottomed cups act as funnels to channel water from the top of the chain to the bottom. In most rainfall conditions, cup styles splash less than link styles.

# LINK STYLES

Link designs may splash more than cup styles, and this may be important when they are considered for areas near doors, windows, or walkways. From plain link chains to more decorative combinations of shapes, link chains offer the most open, airy look and clean lines.

# INSTALLATION GUIDE

## Rain chains are easy to install!

Remove the existing downspout (it's usually held on by a few sheet metal screws).

**V-Hook:** Place the chain in the V of the hook, bend the ends together to insert into the hole, and spread apart to fit.

EVERY CHAIN COMES WITH A V-HOOK FOR EASY INSTALLATION

## V-Hook Installation

OR

**RCR-1 Installation Kit:** Remove the bolt; drop the RCR-1 cylindrical outlet piece into the gutter hole (with or without the optional reinforcement plate) with a little silicone adhesive or similar (not included); install the rain chain from the bottom using the bolt.

If you are making a new hole for the Installation Kit, 2 1/4" is the correct diameter.
