

STOREGANIZER: THE SLIM FIT WAREHOUSING SOLUTION

STOREGANIZER
MORE STORAGE IN LESS SPACE

Why Storeganizer?

Optimising the cost per square metre and organising order picking as efficiently as possible are ongoing challenges in warehouse management. Pallet racking works well for high-volume, fast-moving items, but may lead to a big waste of space when it comes to smaller, slower moving inventory items.

Innovative storage system

This is where Storeganizer comes in. This innovative, high-density storage system provides a slim fit storage solution that is ideal for small, slow moving items.

40%
in space¹

42%
in travelling time¹

26%
in order picking efficiency¹

Space-saving

Based on a concept of vertically stacked, multi-row high quality pockets, Storeganizer limits the costs per square metre. It's designed to accommodate small items in columns of suspended, easy-to-access vertical pockets, made of flexible, durable coated textile. Although lightweight themselves, these columns can support up to 100 kg as standard, with a 10-year warranty.

Efficient

Storeganizer is the perfect solution to optimise racking space in a cost-efficient way. On average, travelling time is reduced by 42%, resulting in a 26% gain in order-picking efficiency.

¹ According to research performed at the University of Leuven, Belgium, 2013

Ergonomic

A Storeganizer solution concentrates a large number of SKUs in space by stacking them vertically, reducing the picking area to be covered. Therefore shorter travelling distances lead to higher order picking productivity.

The configuration can also be easily arranged to limit bending and lifting, by storing the fastest moving and/or heaviest SKUs on higher levels.

“Rarely do you achieve a ‘win-win’ with new products. In this case, there are no disadvantages. These columns increase efficiency; eliminate the need for expensive rack upgrades, site expansion or offsite leases; improve tidiness; reduce staff stress and impress corporate leadership. We only wish we had discovered this earlier.”

Todd Bayless,
Material Services Team Lead at Rittal

Pockets

To avoid wasting space by storing small items on shelves, Storeganizer packs these items more densely in vertical columns of slim pockets.

Modular

The universal hanging system and modular design of the Storeganizer solution allows easy installation in any new or existing rack wherever it is needed in the warehouse.

Textile

The cost-efficient, environmentally sound and highly protective Storeganizer pockets are crafted of high-quality industrial textile fabric. Durably coated, these flexible pockets feature up to a 10-year warranty.

Range of options

A Storeganizer solution is highly adaptable, featuring a very broad assortment of pocket dimensions and customisation options from which to choose.

How it works

The textile pockets can be suspended up to four rows deep, and the back rows are easily accessed by simply rolling the lightweight columns in front to the left or right.

The modular design offers built-in customisation possibilities, making it possible to start with a basic module and gradually scale the solution according to the company's needs.

Our services

Measuring and installing a Storeganizer solution at your facility can be done at short notice, including on-site customisation.

A Storeganizer expert measures the area and the products to be stored using Storeganizer's unique Quantisizer software. Based on these measurements, pockets are tailor-made, perfectly optimised to the available space and the type of products the Storeganizer configuration will contain.

Thanks to their strong industrial textile fabric, Storeganizer pockets come with a 10-year rip-and-crack warranty. Our post-installation service keeps a Storeganizer solution as good as new for years, and entrepreneurs and CFOs benefit equally from Storeganizer's continuous product evaluation.

“I had no clue that such an efficient system to create supplementary storage space existed, offering a fitting degree of flexibility as well. We were able to continue our business operations as usual, our employees did not need to make any adaptations. Everyone is very pleased about it.”

Carlo Theunissen,
Business Unit Manager at H. Essers

“Compared with our previous system, we save no less than 90% of the space in square and cubic metres with densely-packed Storeganizer columns.”

Hilde De Meyer,
System Administrator at Gates

The original

Storeganizer offers the original slim fit storage solution, supported by the Belgium-based automotive expert conTeyor. For decades, conTeyor has specialised in packaging solutions for mass transportation. Its textile solutions help to avoid using disposables such as foil, cardboard or plastic. As a spin-off, Storeganizer offers sustainable storage solutions for smaller items. These SKUs are stacked in pockets with protective characteristics that help to preserve the products for years. As a cost-effective and ecological solution, Storeganizer offers considerable added value to the supply chain.
