

25 Years of AtlanTech Vision

2001 – 2026

From Consulting Roots to the Edge of Reality

Tony Valdez
Founder, President & Director of R&D
AtlanTech Vision Corporation

Delta, Colorado | June 2026

ATVICO — Great ideas for a new frontier.

Scan to visit atvico.com

In 2001, AtlanTech Vision began as a consultant company — a lean, independent practice delivering systems integration, IT advisory, and practical engineering solutions. Founded on the principle that the best results come from direct accountability and clear thinking, it quietly incubated bolder ideas while serving clients with precision and integrity.

Twenty-five years later, AtlanTech Vision Corporation (ATVICO) has evolved into a full-spectrum innovator and creator. What started as advisory work has become a deliberate forge for frontier technologies that empower individuals and communities to build their own futures. Headquartered in Delta, Colorado, with active labs and production facilities, ATVICO now develops and prototypes systems that turn imagination into physical reality at every scale.

The Arc of Evolution

2001–2020: Consultant foundations in systems thinking, networks, industrial operations, and construction — while the seeds of decentralized manufacturing, immersive experiences, and new physics frameworks took root.

2021: Re-established as a Colorado C-Corporation to protect and accelerate the vision. SHED (Smart Highly Efficient Distributed-Manufacturing) and the WindFire framework moved from concept to active development.

2023–2025: Iterative hardening through AI collaboration (Grok Conductor), canonical document locking (WindFire Opus, SHED Bible), and the emergence of Plausible Reality™.

2026: Breakthrough milestones — provisional patent for PVD™ (Parallax Visual Dimples / HemiComb™) glasses-free light-field displays, BATON orchestration layer (the “living score” for the SHED Swarm using the Weaver’s Loom framework), and active 2026 pilots in Canon City and Colorado Springs. Out in the Garage Studios continues real-world testing through content and creative output.

What We Build Today

ATVICO’s core technologies form a unified ecosystem:

- **SHED** — Modular, self-replicating micro-factories that bring precision manufacturing to backyards, rural communities, and remote sites.
- **BATON + Grok Conductor** — Blockchain-anchored, human-sovereign orchestration that eliminates drift and enables reliable swarm coordination.
- **PVD™ / HemiComb™** — Patent-pending architecture for true glasses-free, multi-user immersive visuals — the final technical bridge to Simulated Reality®.
- **WindFire Effect** — Entropic physics framework that unifies energy, pattern, and matter, informing both technology and creative canon (Plausible Reality™).

These are not isolated tools. They are interoperable “grand ships” and a precision “loom” designed for universal application — from personal independence to industrial-scale impact.

Philosophy

ATVICO operates as a **For Valued Profit** enterprise. Profit follows from open truth, tangible creation, and resilience. We do not seek to own the future — we steward the means for others to create it. *“If you can think it, it will build it.”*

The Voyage Continues

After 25 years of tempering — heated by vision, hammered by reality, cooled by patience, and hardened by direct consequence — ATVICO stands ready. Prototypes are live in Delta. Pilots are launching. The orchestration layer is mature. The call is clear: accredited investors, strategic partners, engineers, educators, and creators who share the vision of radical independence through decentralized innovation.

Set sail.
