

Recovery Ready Referral Form

Product: Game Ready Vasopneumatic Compression and Cold Therapy System with wrap selection.

Hire Options: 2 weeks: \$300 | 4 weeks: \$550 (courier additional). Full leg boot: additional \$100.

Patient Details:

Patient Name: _____ Phone: _____

Patient Address: _____

Patient Email: _____

Claim No / Company: _____

Date of Surgery: _____ Treatment Start Date: _____

Procedure: _____

Letter of Medical Necessity:

I am writing on behalf of my patient to approve the use of the Game Ready vasopneumatic compression and cold therapy system. I consider this device medically necessary and prescribe it for musculoskeletal injury treatment and post-operative rehabilitation.

The Game Ready System combines cold and compression therapies and is intended to reduce oedema, swelling and pain following surgery or acute injury.

RICE (Rest, Ice, Compression and Elevation) has long been used to support recovery following orthopaedic procedures and acute injuries. Game Ready combines adjustable cold therapy and intermittent compression in one easy-to-use system.

The anatomically designed wraps provide circumferential cold and compression for major joints to support recovery and rehabilitation. I recommend that the patient use this device multiple times daily as part of their post-operative care plan.

What is Game Ready Cold & Compression Therapy?

The Game Ready system provides intermittent compression and controlled cold therapy through joint-specific wraps. Cooling is delivered via circulating ice water, while compression is delivered through an intermittent pneumatic pump.

The system is intended for use in hospitals, outpatient clinics, sporting environments and home settings under the guidance of healthcare professionals.

Benefits of Cold Therapy:

- Helps decrease pain and muscle spasms
- Reduces tissue damage by lowering metabolic demand
- Assists with reducing swelling and inflammation

Benefits of Compression:

- Helps limit swelling following injury or surgery
- Supports oedema management and fluid reabsorption
- Provides effective intermittent compression during recovery
