

Increase your cashflow ...

Geolnquest LLC transforms your seismic into QI decision support products that rapidly increases cashflow. How ?

- ✓ Leveraging proven oil finding ExxonMobil experience
- ✓ Revealing hidden fluid related seismic anomalies
- ✓ Clients drill fewer wells and produce more oil sooner

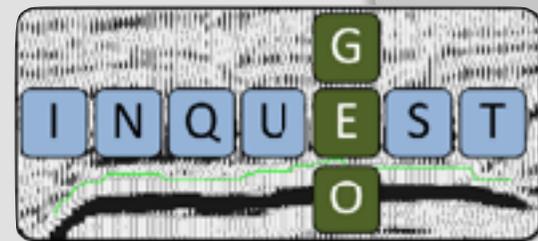

We help you make better business decisions !

... with QI technology

Geolnquest's QI geo-specialists apply our proprietary "Data to Leads" workflow that:

- ✓ Delivers a robust ranked list of outliers (sweet spots) with volumetrics
- ✓ Maximizes correlation between deliverables and well data (petrophysics, EUR, ...)

We apply the following essential steps to successfully identify hidden anomalies in your seismic data:

- ✓ The identification of outliers in terms of fluid content, geobody continuity and net-to-gross
- ✓ The consistent balancing of seismic energy and bandwidth across stacks, increasing geologic fidelity to amplitudes
- ✓ The enhancement of the signal-to-noise ratio using proprietary structurally oriented noise reduction
- ✓ The accurate highlighting of hydrocarbon related AVO effects
- ✓ The normalization of seismic amplitudes across multiple surveys and basins

Geolnquest finds sweet spots **FASTER, BETTER, CHEAPER.**
