Clinical Notes & Informed Consent Automated Notetaker

Overview:

I consent to the use of a Clinical Documentation Assistance Tool by Eric Osterlind, powered by Clinical Notes AI. This tool aids in creating accurate clinical notes from your sessions.

Tool Functionality:

- The tool converts our conversations into notes and clinical documentation.
- It uses speech-to-text technology to create a transcript of our interactions, which is deleted once the note or document has been created.

Data Retention Policy:

- Audio is not stored in any system
- Transcripts are de-identified with any personal information and disassociated with the record after 7 days
- Clinicians may save notes for longer as part of your medical record.

HIPAA Compliance and Patient Data Rights:

- We adhere to HIPAA standards, ensuring the security and confidentiality of your health information.
- You have rights under HIPAA, including accessing your records and requesting amendments.

Consent:

By signing, you consent to the use of this documentation tool. You acknowledge the data retention policy and understand your rights under HIPAA regarding your health information.
