audrey.gordon@outlook.com or s.wong@sasktel.net

OAB/ORB Guide Rating Instructions:

□ Place a "✓" in the 'Not Applicable' box if the item has not been identified as a treatment target for the individual, that is, the item has not received a 2 or 3 VRS rating.

Place a "\sqrt{"}" in the "Unable to Assess" box if there is insufficient information available to rate the item or when there are special circumstances that preclude the item from being appropriately rated, such as the individual being placed in segregation or isolation, which would severely restrict opportunities for observations of OABs and/or ORBs.

□ For applicable OAB items, place a "✓" in the box beside any of the applicable OAB/ORB descriptors that are provided and/or record any additional or alternative OABs or ORBs that correspond to the particular dynamic factor. Note that the same ORB can often be applied to a number of dynamic factors. For example, taking a "time out" can have generalized applicability and can be an effective ORB for Impulsivity, Emotional Control and Interpersonal Aggression.

□ Using the guide below, circle a number (0, 1, 2, 3, 4) on the rating scale, ranging from Never to Very/Often Always, to indicate the *overall* rate of occurrence of OABs and/or ORBs observed during the assessment interval.

0	1	2	3	4
Never	Seldom	Sometimes	Often	Very Often/Always

During the assessment period:

Never (0)	The behaviours did not occur.
Seldom (1)	The behaviours occurred only very rarely; the behaviours were very scarce, infrequent, uncommon.
Sometimes (2)	The behaviours occurred at a rate higher than "seldom (1)" but lower than "often (3)".
Often (3)	The behaviours occurred many times and can be described as frequent and quite common. The behaviours were likely but not necessarily observable in a variety of situations and circumstances.
Very Often/Always (4)	The behaviours occurred very frequently, most or all of the time. The behaviours were very likely but not necessarily observable in a variety of situations and circumstances.
