To meet all your unique challenge goal, we invested in strategic partnerships with various business partner, enabling us to have direct access from the warehouse floor to latest software and hardware in the market. With a vast network of various services expert and industry-recognized expertise in digital transformation, we can help guide your business to find the right strategy. We leverage HCD methods and tools at the planning stage of every engagement. We give every end user a voice from the very beginning, facilitating a continuous feedback loop, increasing buy-in, and accelerating adoption of the end product. This provides a holistic picture of the

environment to accurately define the problems and helps us solve large and complex issues. IT modernization needs vary across federal agencies due to their diverse IT environments and business needs but ultimately the goal to support digital transformation and increase efficiency and effectiveness is constant. Underpinned by our primary passion to optimized business processes and strengthen System of Internal Controls and Risk Management, we carefully assess the current status prior to provision of advice and deployment of the most suitable digital solution

Company Overview

RAINMAKER INFORMATION SYSTEM SDN BHD (RIS) is a long-standing ICT servicing company established in Kuching, Sarawak in 2015. What started as a humble, organically grown enterprise has evolved into a versatile private limited entity with our services covers global expansions for businesses. Over the years, RIS has cemented its reputation as a trusted supply and services vendor to various institutions, particularly local government bodies and non-profit entities in Malaysia.

“Everywhere will be rain” – We joint talent, resources and network to penetrate all sectors of business and contribute to green solutions and responding to global zero emissions effort

“Closing Skills Gaps with Technology”

Mission Statement

Closing Skills Gaps with Technology

Our corporate mission is to unlock the challenges of digitalization and connect entities to global company products and solutions

We act as an agent and consultant to deploy the most demanded IT products, systems, and storage solutions in the market to serve local needs on various scales. As a one-stop provider, we offer a multitude of communication services and comprehensive global and local ICT solutions supported by our close teamwork with dynamic partners, headquarters, and other strategic subsidiaries in the region.

Net Zero Statement

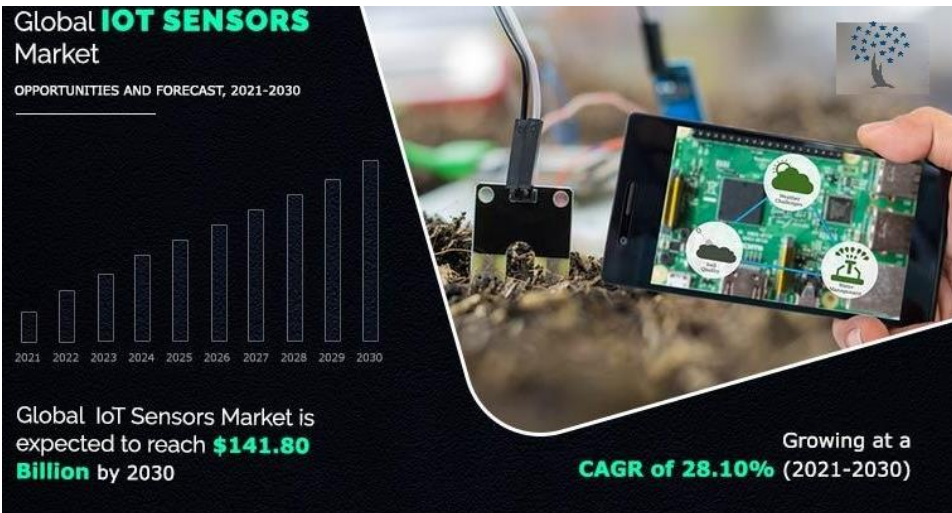

We developed long-term solutions toward a sustainable future. In particular, to develop clean energy systems, improve data analytics for environmental applications, and advance machine technology across transportation, construction, and natural resource management.

We chose to focus our sustainability efforts around a net-zero emissions strategy. That means reducing all GHG emissions generated by our company operations to near zero and neutralizing any residual emissions by removing the equivalent amount from the atmosphere. To achieve this goal, we prioritized two strategies: energy efficiency and conservation, and renewable energy sources.

Be the leader of Green Building
Promoter of green practice
Sustainability within the growing market

Malaysia Green Building Council is the key driving force towards a Sustainable Built Environment in Malaysia

Provides a wide variety of product and services tailored to meet customer business requirements focusing on making edge more intelligent

MAKING EDGE MORE INTELLIGENT

Delivers the expertise to quickly implement digital transformations that efficiently adapt to rapid change. We help customers transform how they conduct their businesses by making their edge more intelligent and connecting it to the rest of the organization. Customers can then take advantage of this intelligence and create better experiences in the workplace for both for employees and customers.

We help to create a more intelligent edge with **Networking: Build a communications fabric to support secure and efficient delivery of business outcomes** **Digital Workplace: Define how your employees and customers engage and conduct business** **Internet of Things: Leverage data gathered from “things” on the edge to solve business problems.**

Whether you’re ready for a move to a cloud experience or simply want to digitize certain products, processes, or machines, we are a trusted partner to accelerate your digital transformation with a unique multi-vendor methodology based on industry best practices, long-term experiences, and recommendations from similar project experiences.

You can also deploy RIS Fast Start solutions to start your digital transformation quickly with a pre-integrated solution that reduces configuration efforts and allows quick access to insights. Solutions include condition monitoring, video surveillance, quality assurance, and intelligent facilities.

SDWAN NETWORKING SUCCESS STORY

Hybrid Cloud

Salcra is the market leader in oil Palm plantation for businesses and public-sector of 120 sites

organization's Sarawak, with approximately 5800 employees and sites. The company has modernized with VMware Cloud Foundation on Nutanix Cloud Infrastructure (NCI) Cloud Platform. This has made it simple to “lift and shift” applications and infrastructure to the cloud, while also providing a platform for customers to develop new cloud-native applications and services in Kubernetes.

Salcra's stakeholders have seen huge benefits operational efficiencies and IT transformation: An engineer has dramatically

reduced the time to update stocking records, for example; a palm oil mill has transformed its business by providing needed services 8 hours a day, rather than just from 9 a.m. to 3 p.m.

It serves rural farm estates that have minimal IT support at their remote locations. It delivers a cloud-based managed service using a software-defined networking solution running on Dell PowerEdge Servers. Key to the company's transformation has been the ability to provide SD-WAN services with advanced security on a cloud platform.

One customer had to network 120 locations as quickly as possible; with the cloud and SD-WAN, the network enhancements rolled out in just two weeks and has successfully result to cost reduction, better security and minimized downtime

EMPURAO FARM BREEDING SYSTEM SUCCESS STORY

Borneo Empurao farm Serian Kuching
The farm is currently breeding using RIS smart farming methodology and has been providing sustainably to contracted government sector.

We Completed a sponsored Proof of concept (PoC) amounted to Rm 180,000 by the first farm in Sarawak with Aquaculture Sector My GAP Certification Scheme.

We deliver premier solutions and services that meet the diverse needs of our clientele. With a dedicated team and a mission-driven approach, RIS is poised for continued success and growth in the evolving digital landscape.

INVEST FOR THE FUTURE

Smart farming is about managing farms using technologies like IoT, robotics, drones, and AI to enhance and optimize food production.

We welcome collaborations and value talent as embracing new opportunities in an explorative nature is our core capabilities to success. We value proactive and creative partners to enrich our skills bank to cater to the market we serve. A Workplace where every partner can do their best work by working the way they work best.
