870 Cycle Delineator Bollard

Introduction to I-glo Cycle Delineator Bollard

We have developed a Cycle Lane divider that creates fully segregated cycle lanes with minimal install time thanks to a system using only two bolts to secure. The 60mm height of the delineator is the lowest out of all our competitors whilst still being able to house a flexible bollard. There isn't a corner on the whole product accompanying with glow material highlighting edges meaning its very unlikely to be a trip hazard. It is the only delineator out there to have reflective and glow in the dark material causing it to be visible in any lighting conditions.

Key Features:

- Glow in the dark material highlighting all the edges to reduce it being a trip hazard.
- Reflective signage making it easy for everyone to follow.
- Chamfered edges throughout the delineator to again minimize any trips.
- 8KG total weight meaning very easy to install with 1 person.
- Flexible post meaning no damage in the event of a collision.
- 2 bolt fixing meaning next to no downtime.
- Ant slip finish meaning safe in all weather conditions.
- Recycled Plastic beads mixed with a polymer resin creating a very durable and tough finish.
- 5-year guarantee.

Fitting Guide:

1. Measure and mark required distance between cycle delineator (Personal Preference).
2. Centre the delineator on the mark you've just created.
3. Mark the M10 holes either side of the delineator.
4. Using a 10mm masonry drill bit drill to the required depth of the anchor bolts.
5. Line delineator back up with holes and insert anchor bolts and tighten until there is resistance.
