

CrO's R&D Systems Exchange

The **R&D Systems Exchange** service focuses on emerging and mid-sized markets to devise a strategic plan to implement an entire platform, in a phased approach, which allows customers to easily adopt essential functionality, baseline business processes/training, and successful transition strategies.

This service allows small organizations to utilize limited functionality and processes required for the successful management of R&D documentation. As organization grows additional functionality and processes can be added.

Client Benefits

By engaging with CrO's team of highly experienced Subject Matter Experts, our clients benefit from our deep understanding of business critical needs as well as the complex systems that support them. CrO will bridge the gap between the business and technology and will:

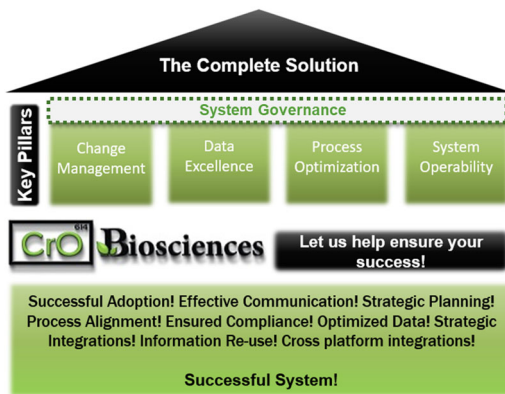

- Deliver complex projects on time and within budget.
- Reduce client time commitments and constraints.
- Deliver with speed and high quality.
- Reduce operating costs.
- Meet Regulatory and Compliance requirements.
- Deliver value and ensure company's success!

Our Approach

CrO understand **The Complete Solution** and our clients crucial business needs. Our approach focuses on these 4 Key Pillars to ensure success:

1. **Change Management** - ensures successful adoption, engage leadership, strategic planning, end-user support, effective communications and training solutions.
2. **Data Excellence** - data quality, cleansing, metadata optimization, constructive reuse of information across platforms and proper dispositioning.
3. **Process Optimization** - streamline, harmonize or align processes to gain efficiencies and ensure compliance.
4. **System Operability** - requirements, configuration, validation, change control planning and implementation strategy to evaluate system platforms and upcoming implementations.

Key business needs must be met throughout the entire implementation process, and beyond, to ensure your organization's success:

Phase I: Essentials System Implementation: allows our clients to focus on implementing the new upgraded system while achieving the minimum required processes and business support. *(Align with Timelines)*

Phase II: System Enhancements/Process Implementation: allows our clients to focus on implementing business critical process enhancements to support successful system use. *(est. 6-week duration)*
