**NOTE:**  
 THE DISPOSAL SITE FOR THE EXCAVATED MATERIAL FROM THE PROPOSED HARBOR ISLAND MARINE TERMINAL WILL BE STRATEGICALLY PLACED ALONG THE NORTHERN BANKLINE OF THE CORPUS CHRISTI SHIP CHANNEL (CCSC), AS DETAILED. AS A CONCEPTUAL COMPENSATORY MITIGATION PLAN, THE MATERIAL IS BEING POSITIONED ALONG THE SHORELINE TO PROTECT THE REDFISH BAY STATE SCIENTIFIC AREA (RBSSA), MORE SPECIFICALLY THE SENSITIVE SEAGRASS BEDS, FROM FURTHER IMPACTS RESULTING FROM THE FAILING SHORELINE BETWEEN THE RBSSA AND THE CCSC.

NOTE: THE CONTENT OF THIS DRAWING IS DESIGNED SPECIFICALLY FOR THE PURPOSE OF SECURING FEDERAL, STATE AND LOCAL ENVIRONMENTAL/REGULATORY AUTHORIZATIONS ONLY.

Prepared BY: Project Consulting Services, Inc.

MAY 07 2019

**AXIS MIDSTREAM**  
**MIDWAY TO HARBOR ISLAND PIPELINES & TERMINAL**  
 Alternative Analysis – Executive Summary

**Revision:** 0  
**Date:** 05/02/2019  
**PCS JN:** 19012

**1. Midway Tank Farm**

The Midway Tank Farm site was selected due to the proximity to the existing crude supply sources, available property, accessibility and avoidance of sensitive ecological and cultural resource. Commercial efforts have yielded commitments from four (4) major pipeline suppliers exceeding 500,000 barrels/day. Storage requirements of 4 million barrels at Midway will be necessary to provide a sustainable crude supply for the loading facility.

**2. Midway to Aransas Pass Staging Facility Pipelines**

Several routes were evaluated for constructability, impacts to ecological and cultural resources and effects to administratively sensitive features. Two (2) routes were further examined, both are situated primarily within agricultural areas, occur within a wind farm area, pass within residential areas (Ingleside and Aransas Pass) and are collocated for most of the alignment. The Preferred Alternative is shorter, impacts less residential areas, has fewer roadway, railway and drainage feature crossings. Potential adverse impacts to wetlands, caused by the selection of the preferred alternative are minor and temporary.

**3. Aransas Pass Staging Facility**

The Aransas Pass Facility site was selected based on availability, accessibility, adjacent industrial uses and proximity to the Harbor Island. Consideration was given to the pipeline construction during the selection phase for this site. Offsite locations reviewed were eliminated due to availability and wetland impacts. The property is held by a single landowner and is positioned within uplands as verified by the USACE or areas previously permitted (1522-15 (Gulf Intracoastal Waterway)/11867).

**4. Aransas Pass Staging Facility to Harbor Island Pipelines**

Many routes were evaluated for constructability and impacts to sensitive features. Four (4) alternatives were more thoroughly examined based on practicality. Alternative 1 represents the longest route and the only land alternative examined. The route was determined as not practical due to restrictive work space through the City of Aransas Pass. The three (3) remaining Alternatives all involve HDD under the GIWW from Aransas Pass into an existing oilfield canal, thence marine construction to install the lines through Redfish Bay to the Harbor Island. All three Alternatives will temporarily impact water bottoms, with minimal wetland impacts. Alternative 2 represents the shortest, most direct route, but would impact the greatest acreage of seagrasses and was eliminated. Alternative 3 would require an  $\pm$  8,000-ft. HDD in order to avoid impacts to aquatic resources; however,  $\pm$  4,500-ft is the technical limit for a 42' pipeline, and as a result this Alternative was eliminated. Alternative 3 is slightly longer than Alternative 2 and involves the use of oil and gas canals nearer to Harbor Island. As previously discussed, this alignment also involves an HDD that exceeds the technological limits and was been eliminated. The Preferred Alternative employs conventional trenching technology for pipeline installation, except for crossing the GIWW. Impacts associated with trenching are expected to be temporary and the area will be restored to pre-project contours to the maximum extent practicable. The Preferred Alternative represents the least environmentally damaging, technically feasible alternative.

**5. Harbor Island Terminal**

The Harbor Island Terminal site was selected based on availability, accessibility and location to existing infrastructure capable of accommodating crude carrier vessel movement. The selected site is situated adjacent to the Corpus Christi Ship Channel. The land portion of the Harbor Island site is non-wetland. The Site and surrounding areas support, or have supported, marine operations in the past.
