

Reglazing Proper Care and Maintenance

- 💧 Allow the finish to cure (at room temperature) for a minimum of 24 hours before usage. The full cure time is 7 days. During this time period avoid cleaning and working in and around the tub area.
- 💧 Use non-abrasive cleaners only, such as Lysol Bathroom Cleaner or SC Johnson Bathroom Cleaner (aka Scrubbing Bubbles).
Use a soft sponge only. Using these products will help help maintain your bathtub's glossy finish.
- 💧 Check your plumbing periodically. Damage caused by constant drip or leak is not covered under our guarantee. If any plumbing work is needed, cover the floor of the tub with a heavy blanket or dropcloth.
- 💧 Never use bathmats with suctions or stick-on appliques. Non-suction bathmats are available for purchase from Premier Refinishing Inc. Remove mat's after usage to prevent waterstains.
- 💧 **Never** apply **ANY** tape to the reglazed surface. Peeling due to removal of tape is not covered under our guarantee.
- 💧 Avoid leaving shampoo bottles in the corners of your tub or tiles.
- 💧 Drying your tub with a squeegee or shammie after every use will prolong the life of the finish. This will also make cleaning easier/less frequent.
