

Innovative Solutions for Today's Premier Printer

Continuous-Feed OFF LINE High Speed Enhancement Press Supporting FlexPack and Label Featuring Cold Foil + Cast and Cure™ New: Optional Digital Configuration Available

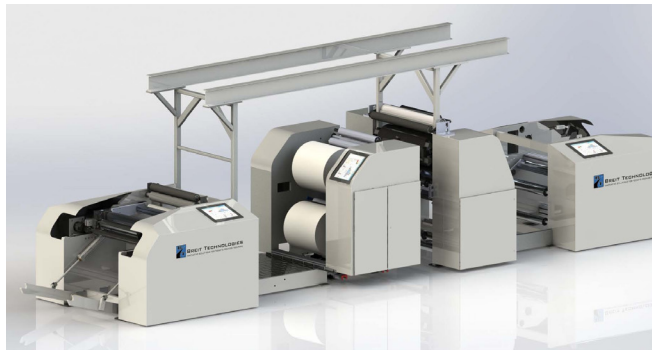

Breit's New Off-Line embellishment system revolutionizes flexpack decoration.

This accurate, versatile, high-speed system can be customized to provide stunning embellishment in any flexible packaging manufacturing environment. Supports cold foil plus Breit's Cast and Cure holographic embellishment techniques.

Optimized embellishment efficiency

The system's design allows manufacturers to cost-effectively embellish flexible packaging + paper labels. Our specialized unwind, curing and rewind stations optimize Cast and Cure application and material re-use. The modular system can integrate printing, lamination and coating processes in line for single-pass decoration.

Designed to handle Breit standard 2500 meter rolls of film, this unit allows access to all of Breit's standard holographic finishes, matte and textured effects.

Equipment highlights

- Web width capacity: 8"- 44"
- Speeds up to 300m/min (1000ft/min)
- Servo drives and programming for accurate re-registration
- Compatibility with a wide range of flexible packaging materials + papers + ps labels
- Modular design for single-pass or offline decoration
- LED or UV curing for reduced carbon footprint & lower power consumption
- [Optional Digital Version with piezoelectric drop-on-demand inkjet. Enables on demand flood or spot applications of UV, foil, or holographic effects.](#)
