

The *dewbie* is a new product that focuses on quickly and inexpensively re-hydrating dry cannabis. Infinitely reusable, this handcrafted stone is made in Calgary from Canadian material and packaged in a drawstring hemp bag. Requiring only water to re-charge and made of kiln-fired clay, the *dewbie* is literally good for 1000+ years of daily use!

IT'S EASY TO USE - JUST ADD WATER

- Soak the *dewbie* in water for 30 to 60 seconds (or just add a few drops to obtain low humidity for maintaining a moisture balanced stash)
- Dab dry first and then nestle your *dewbie* against buds for roughly 10 minutes per gram*
- Remove when no longer needed to avoid over-hydrating (unless using a *dewbie* to maintain moisture balance – see related discussion below)
- Works best at room temperature
- Can be easily washed (soap & water/rinse) or baked in hot oven to sterilize (20 min.)

**Length of time depends on numerous factors and it's safe to leave the dewbie in weed indefinitely when suitable.*

FAQ

How long should I soak the *dewbie* for? The *dewbie* will soak up about 2 grams of water over 2 minutes, but absorbs the majority of that within the first 30 seconds. You can also opt to add only a few droplets of water to a dry stone if using the *dewbie* to maintain cannabis that is already at a satisfactory moisture level.

How long should I leave a wet stone in my cannabis? That will be determined by how much bud you're re-hydrating, how dry it is to begin with, the size of your container and how well it seals, and the desired final moisture content. Generally, a *dewbie* will refresh a couple of grams in about 20 minutes using a small jar with an airtight lid, but a really dried quarter ounce can take an hour or so. In the case of an ounce, rehydration may take 8 hours or more. **However, that 28 grams of dry cannabis will become nearly 30 grams by simply returning to it what it's missing – moisture!**

Can/Should I leave the *dewbie* in my stash? In the case above whereby you've rehydrated an ounce to nearly 30 grams, you can leave the "waning" *dewbie* in with the herb while smoking the contents of the jar. In this way, you are maintaining hydration despite many openings of the container. **THAT SAID**, if you were to leave a well-soaked *dewbie* (i.e., 1 or 2 grams of water) in a sealed container with a relatively small amount of cannabis for **too long** (say 7 grams for several hours), you **risk over-hydrating your stash** (if so, simply air dry by leaving the lid off of your stash or spread over-hydrated buds out on a piece of paper until reasonably dry again).

What about replacing Boveda/Integra Packs? As you can see, the *dewbie* can be used to either augment or replace RH packs. In the former, by providing hyper-speed re-hydration followed by the removal and replacement of the *dewbie* by an RH pack to maintain moisture level during the consumption of the herb. In the latter, by applying a "relative wetting" to the *dewbie* (eg, 10 or 20 drops of water) to maintain an eighth of an ounce over its ensuing consumption; or a full soaking of the stone for a quarter pound. Relative humidity is easily maintainable but may require some 'learning' on behalf of the *dewbie*'s owner, as these little stones are 'tools' that can be easily mastered.

What's the background story with the *dewbie*? With a lot of help from his wife and kids, artisan Dennis Caul works from his home to produce as many as 500 stones per day for Canada's cannabis enthusiasts (the *dewbie* is exclusive to Canada). Each "blank" is individually extruded, cut, stamped, polished and dried before being fired in a kiln at over 2000 degrees. Once cooled, each stone receives its own drawstring, hemp bag, and then labeled using a kraft-paper tag made of recycled material. From inception to completion, every *dewbie* is infused with love & good vibes.

More information about the *dewbie* (including a short video), its maker, and other secrets to the universe found at www.thedevilslettuceshop.com. Thank you for making the choice to support this Canadian product and what it stands for.
