## **Patent granted DEF Dri-Line**

Hartmann Controls, Inc. has been granted a patent for the Dri-Line delivery conduit which allows for the transfer of fluids between reservoirs and tanks without fluid retention in the delivery hoses. This system eliminates the need for heated hoses and draining allowing for instantaneous fill of fluids and gases such as Diesel Exhaust Fluid, Glues, Water, Chemicals that would otherwise freeze or become modified by time and/or exposure. The Dri-Line operates on an intermittent (90-120 second per evacuation cycle) basis, less than 10 Amp power circuit and can utilize a self contained battery backup system for fluid evacuation when vehicle is not running or power is not available.
