NJ Election Integrity

August 1, 2021

Jeffrey Grant

Pat Stanley

Summary

- NJ 2020 election data - Jeff
  - Patterns
  - 6^{th} order polynomial observations
  - Census and Voting History
  - Observations and Analysis
- Action
  - What has been accomplished
  - What needs to be finished
  - How you can help

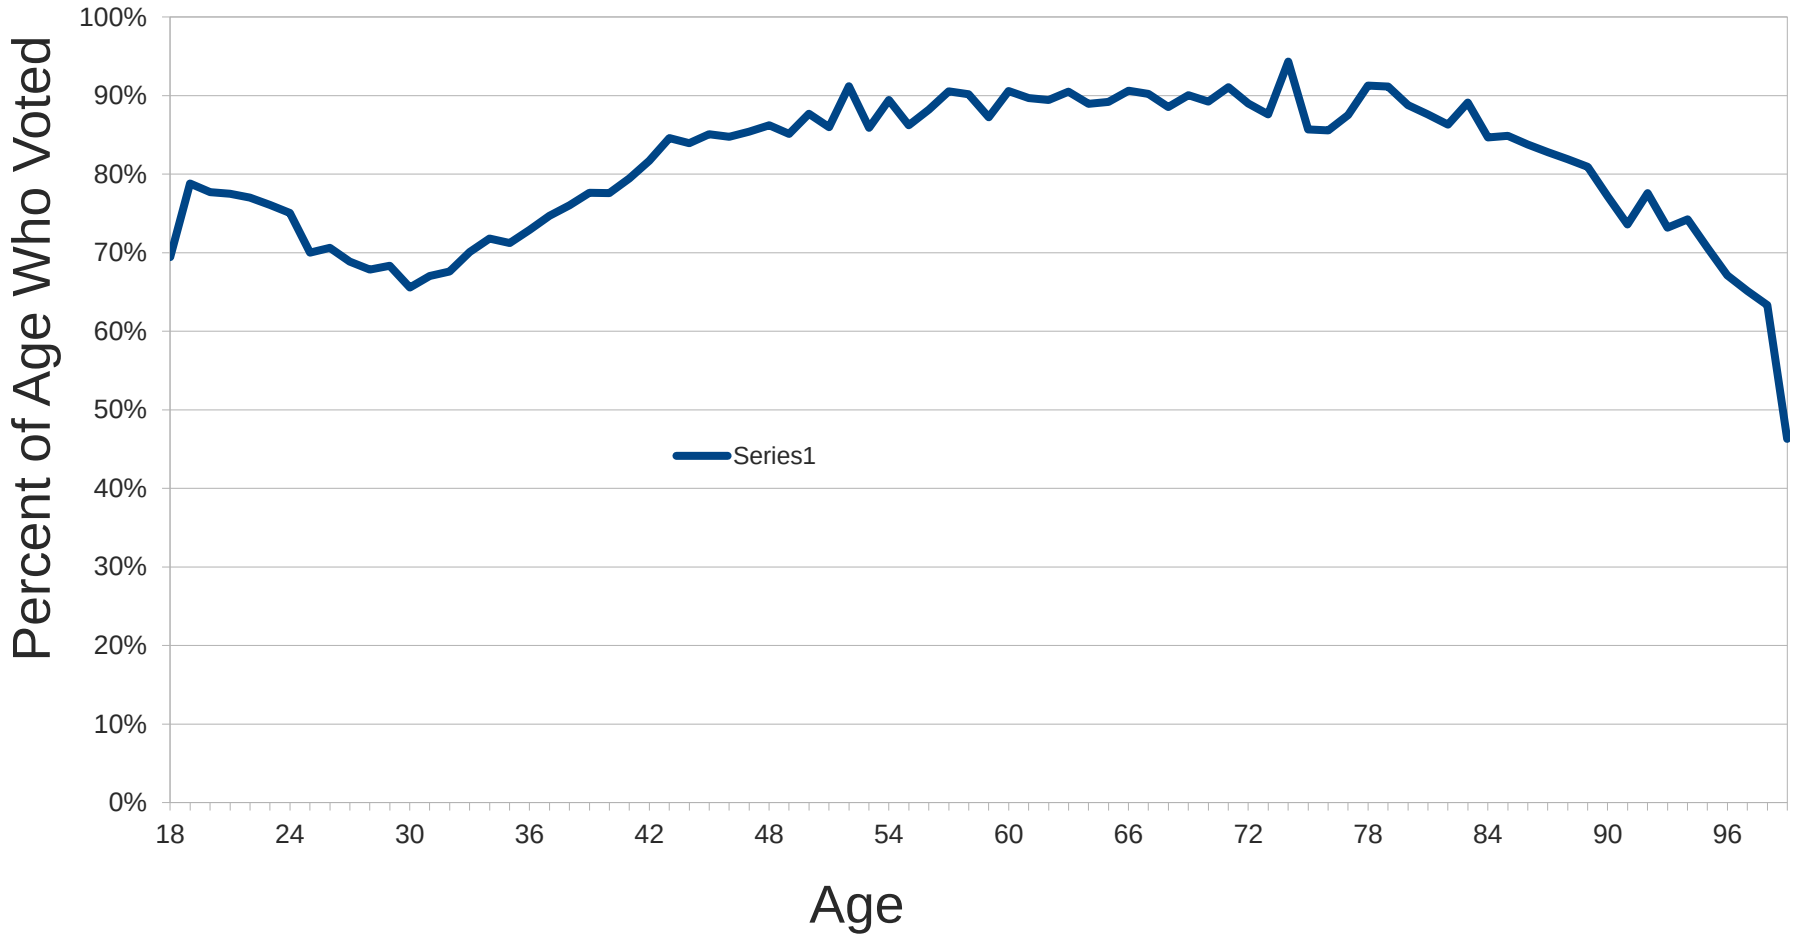
Survey

- Election MIGHT have been tampered with but it did not make a difference in the final result

- Election was HONEST

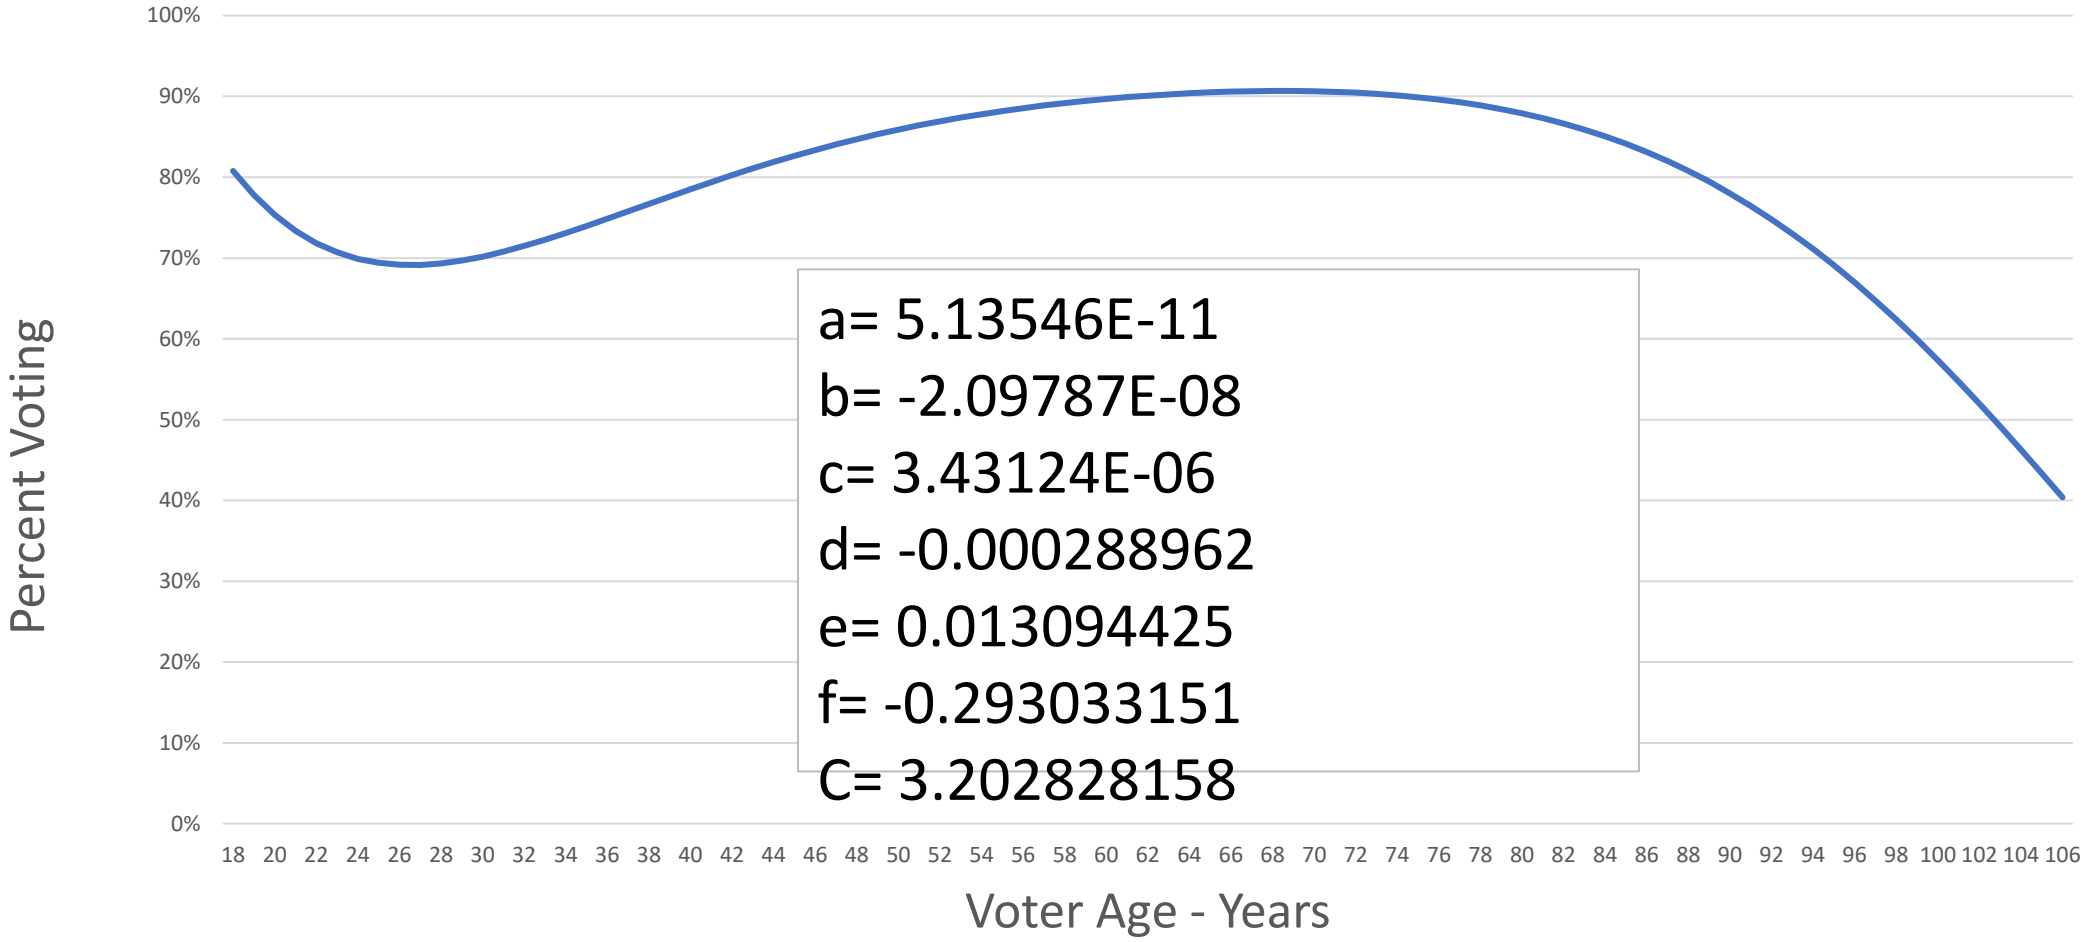
- Election was HIJACKED

2020 Election Data – Somerset County

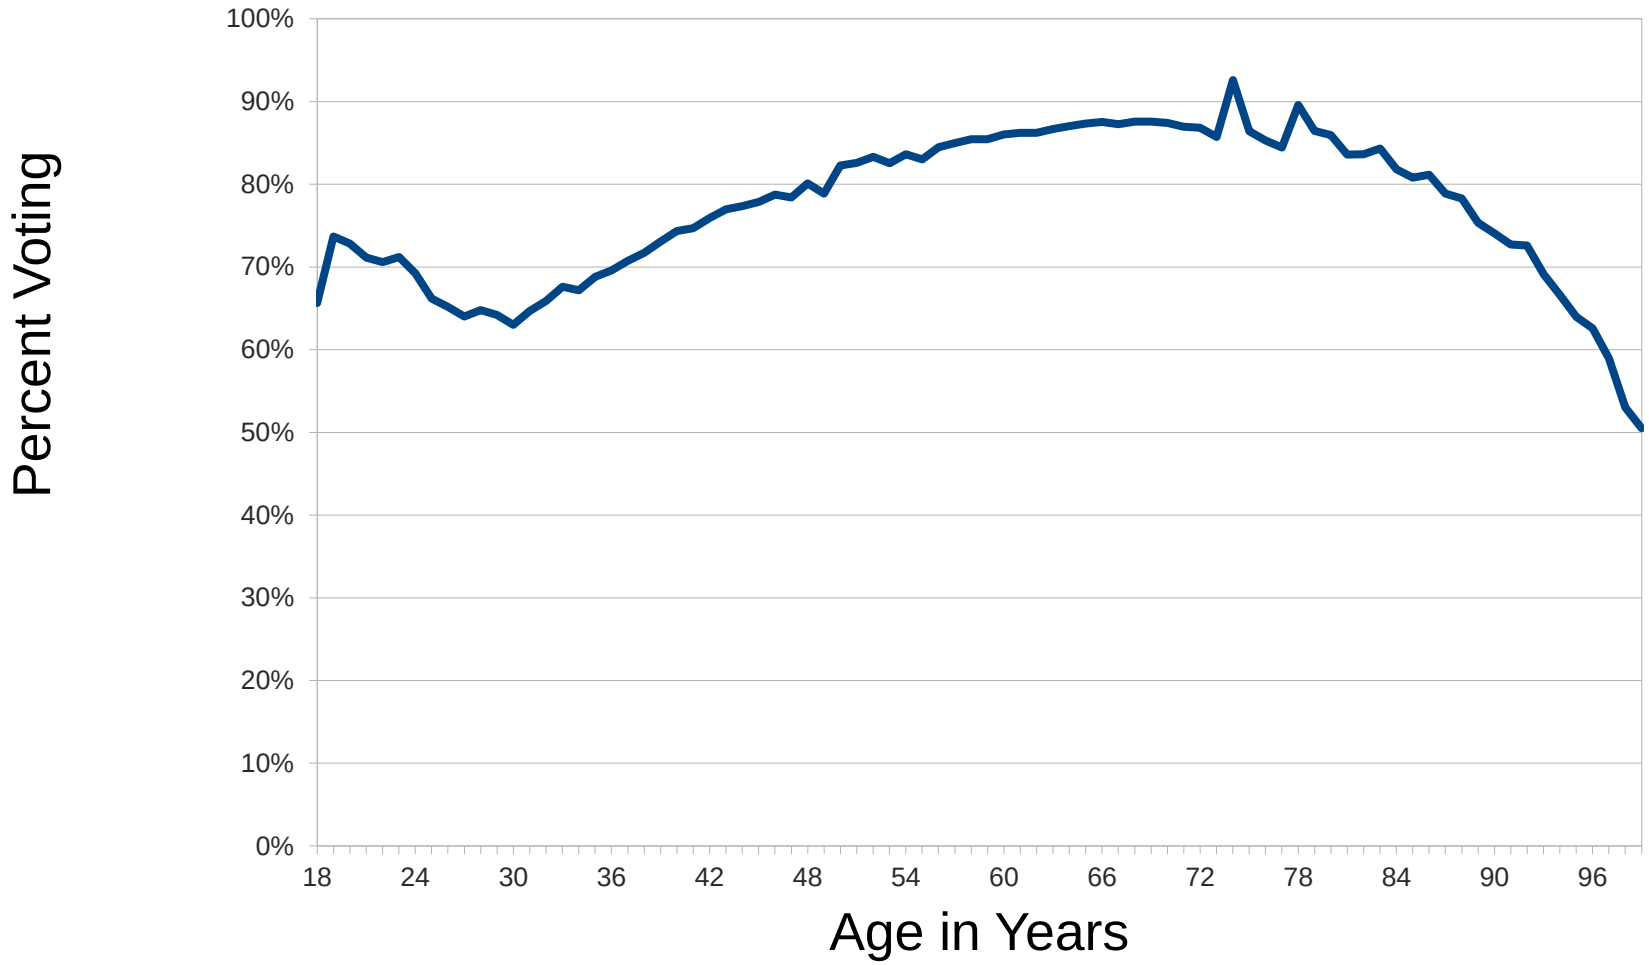


6th Order Polynomial

Y=aX^6+bX^5+cX^4+dX^3+eX^2+fX+C



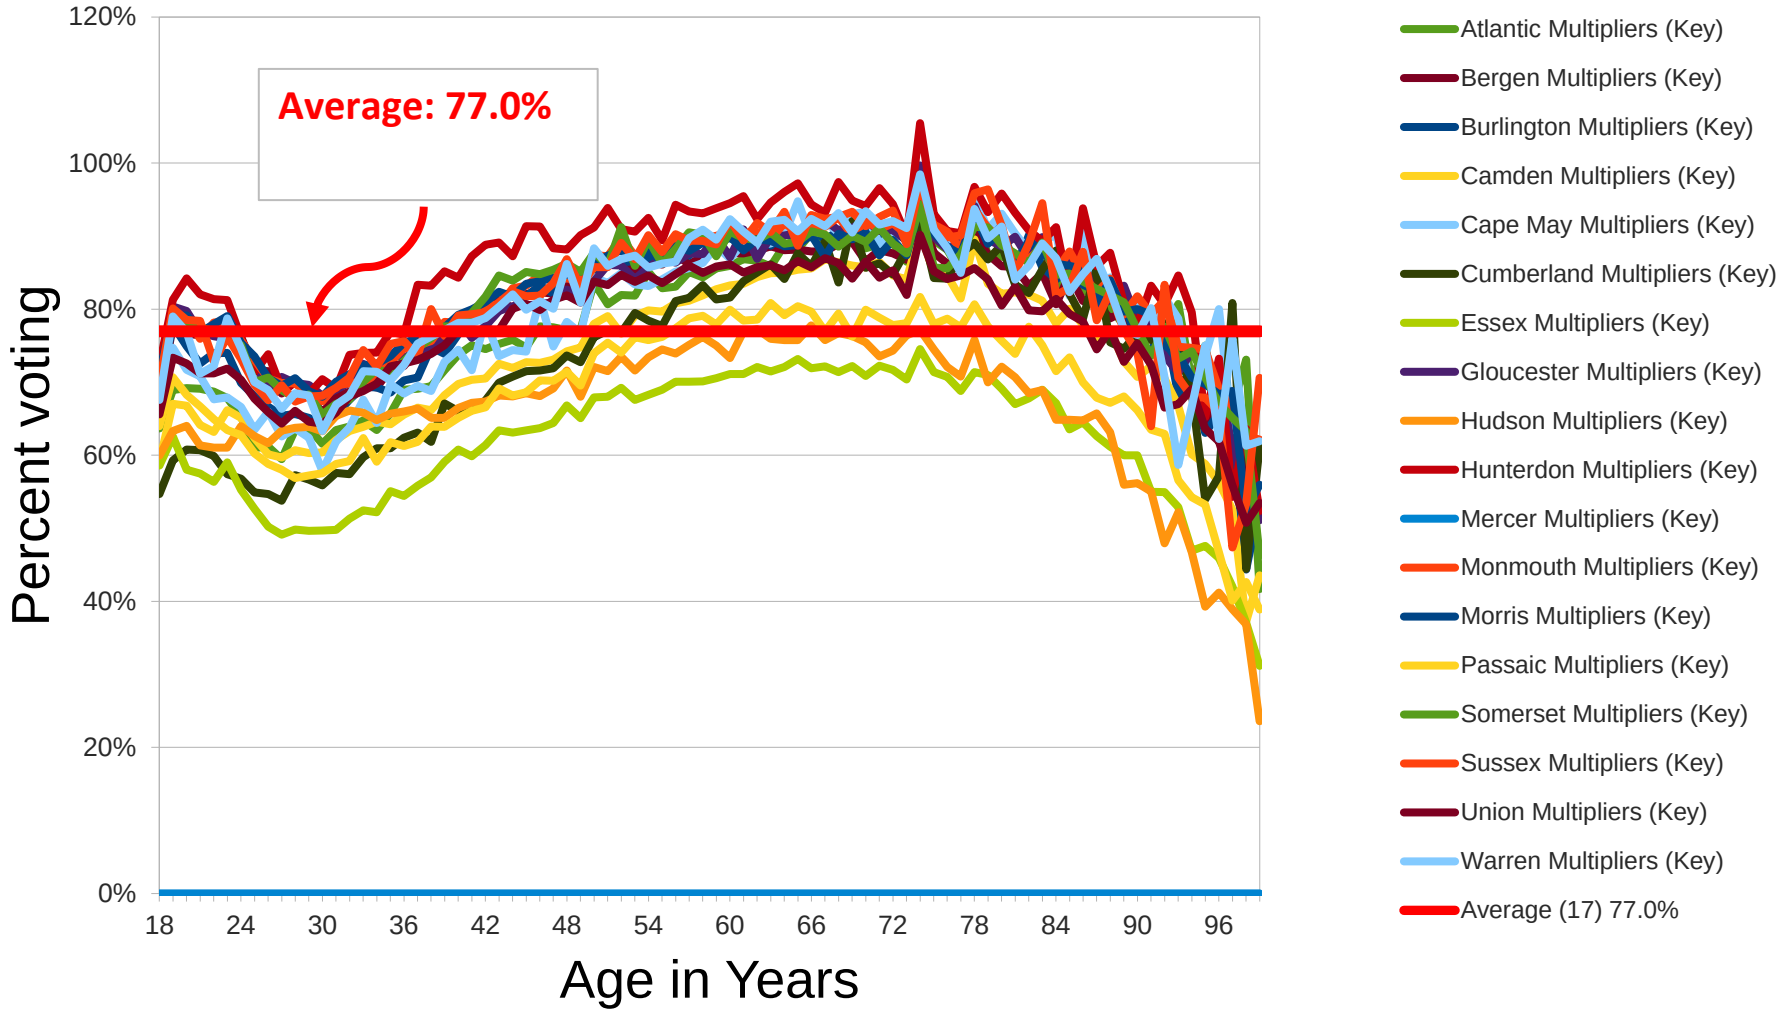
Average Data – 17 NJ Counties

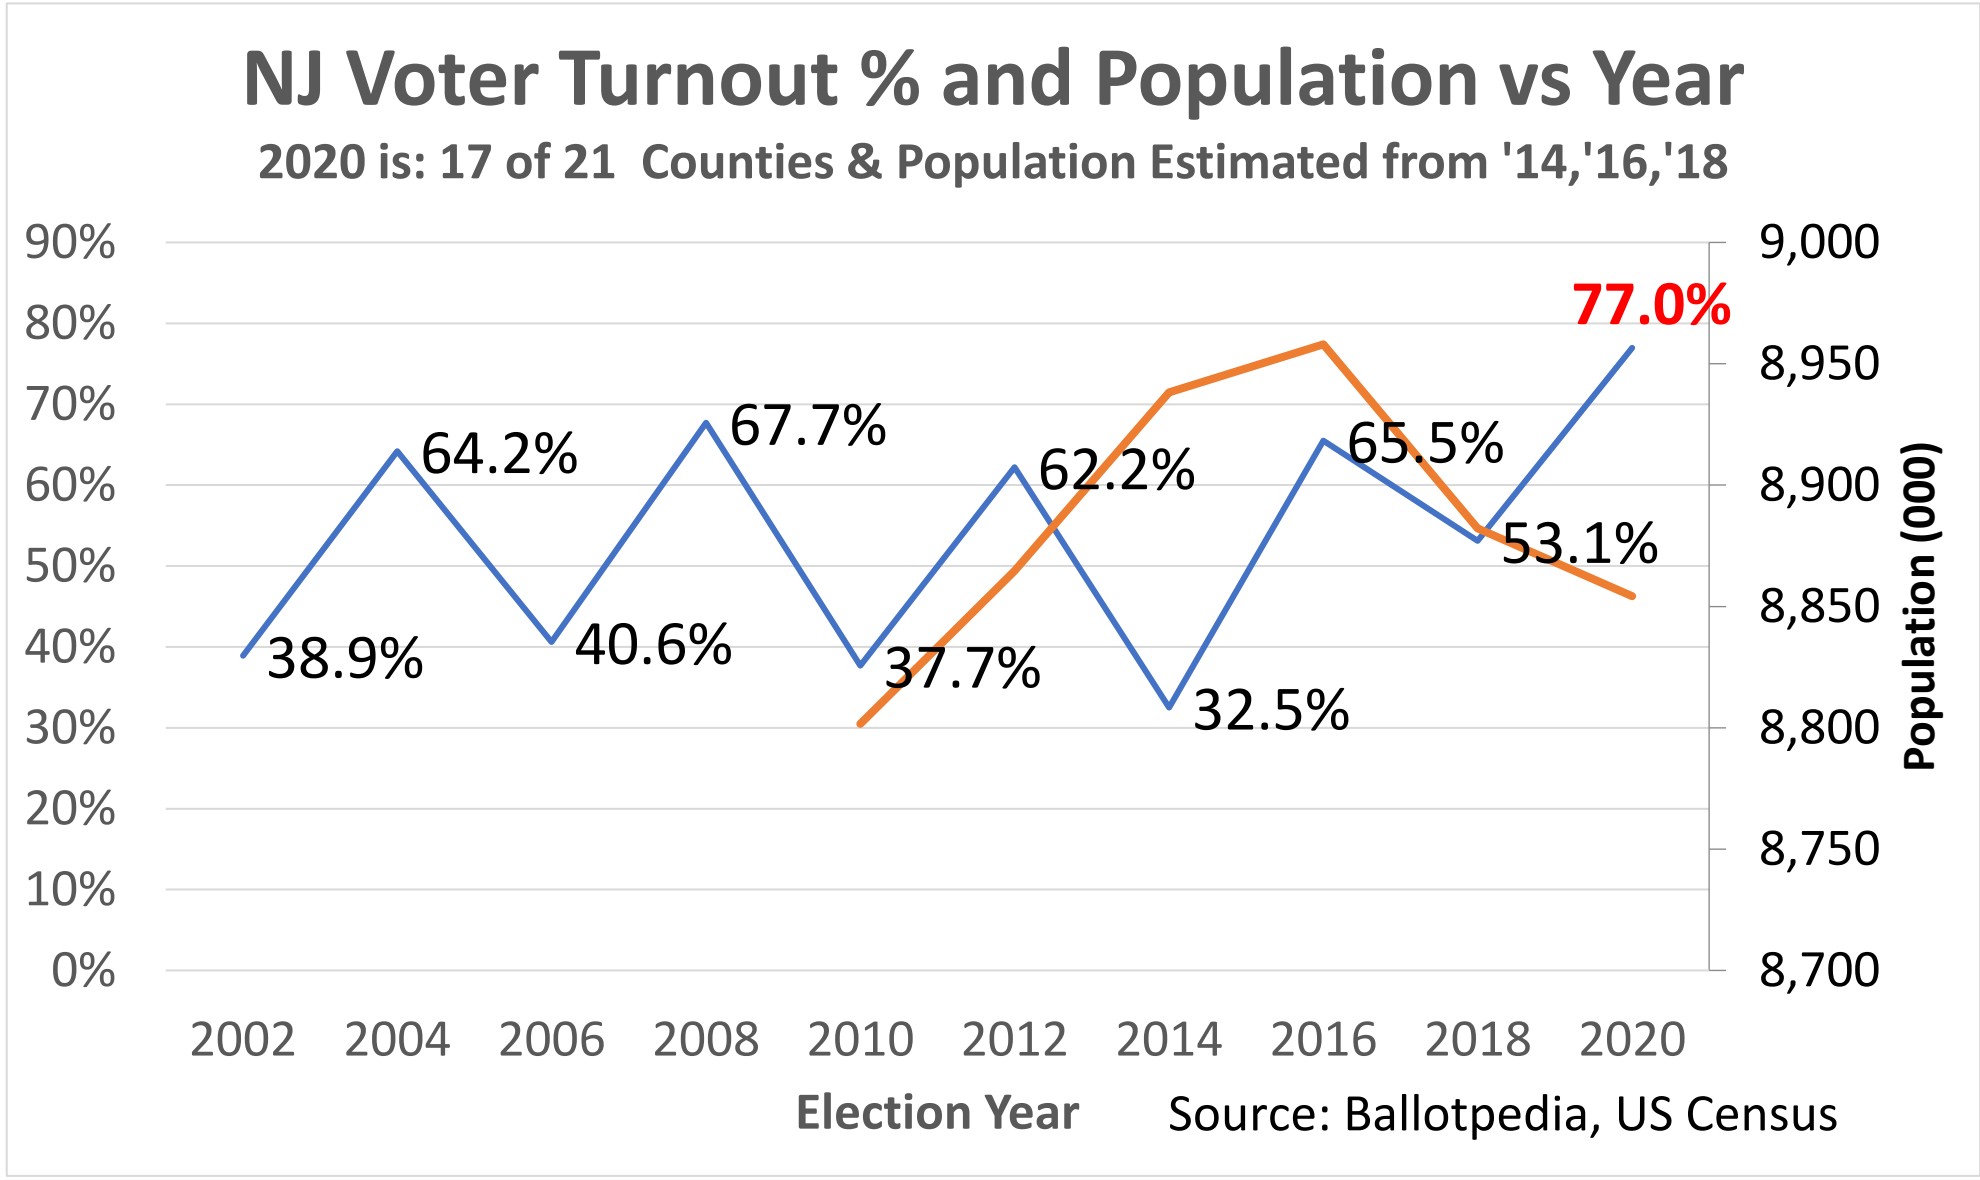


Observations

- Likelihood that ~70% of 18-year-olds voted is instinctually suspect
- Voting patterns do not appear to be “natural”
- 6^{th} order polynomial patterns across all counties may be the result of an algorithm (computer program) designed to “back-fill” votes based on stale census data

Election Data – 17 NJ Counties





NJ Voter Turnout % and Population vs Year
2020 is: 17 of 21 Counties & Population Estimated from '14,'16,'18

Analysis

- Results: Biden 2.6M (57.3%), Trump 1.9M (41.4%).
- 77% (tabulated) less 65% (historical) is a 12% increase in historical turnout
- Equates to 563,000 “phantom” votes in 17 of 21 counties.
- Trump up 281K votes since 2016 – NJ trending to the GOP
- But Dems up 460K votes since 2016
- Yet NJ population declined 2016 – 2020 by ~100K
- The above and voting behavior from 2012 – 2020 suggests registration rolls are packed with phantom registrants and phantom voters

Survey

- Election MIGHT have been tampered with but it did not make a difference in the final resut.

- Election was HONEST

- Election was HIJACKED

Conclusion

“Those who vote decide nothing. Those who count the vote decide everything.”

Joseph Stalin, Soviet Union Dictator
12/18/1878 – 3/5/1953
