Light Spring Control End

Medium Spring Control End
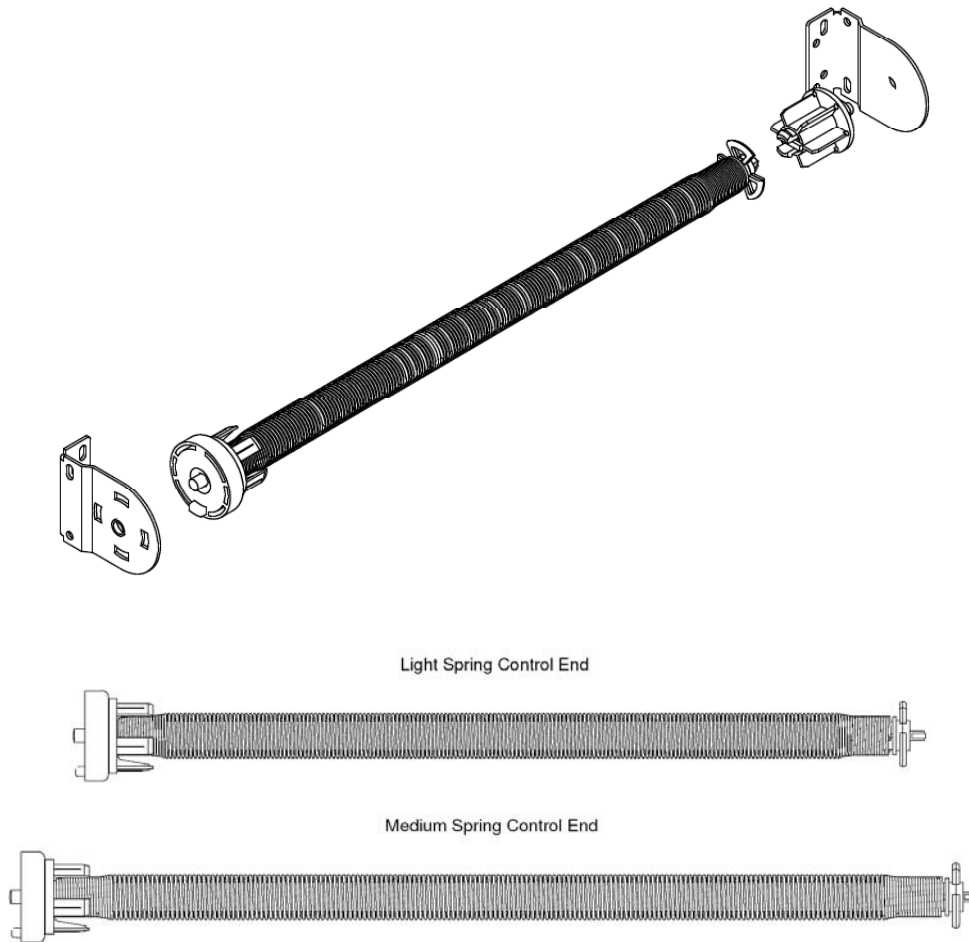

Louvolite now offer a new range of System 32 SR components.
We now have a Light Spring (R1022) and Medium Spring (R1020)

New developments in the Spring Return Control Mechanism :-

·   Greatly improved operation for 'locking' and 'unlocking'
·   With Spring developments, an operational speed improvement has been achieved.
·   The introduction of the 'Light Spring' means smaller domestic blinds have an improved 'any position' operation.
·   The developments on the 'Medium Spring' gives greater control on larger blind installations.

With these improvements we have also created a matrix to assist in selecting the correct spring for operation. (please see attached SR Matrix 09-10). In order to select the right SR unit for you blind, its easy, all you need to do is work out the area of your blind, select the material, and read off the chart.

e.g for a 1.5m x 1.5m blind in Carnival material:-

1.5 x 1.5 = 3

Read across the chart 'blind area' to 3, then go down the list of fabrics to Carnival. The box is coloured green showing 1.12(blind weight) which means a Medium Spring is required.
