

# ***Policy brief for sustaining VL elimination - what are we missing out?***

**P. Olliaro, TDR**

## 2008-14 - REDUCE CASES:

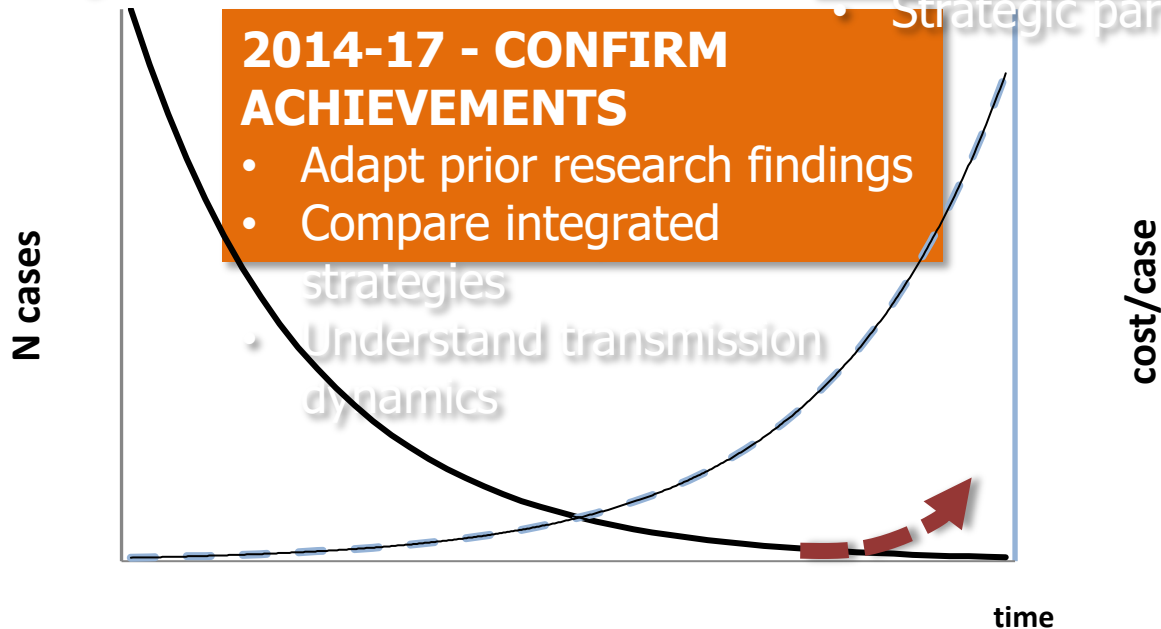

- Tools (diagnosis, treatment, vector control)
- IR-guided improved deployment strategies

## 2017-19 - SUSTAIN ACHIEVEMENTS

- IR-guided sustainable integrated case-identification and vector-control strategies
- Advocacy for political & donor commitment
- Strategic partnerships

## 2014-17 - CONFIRM ACHIEVEMENTS

- Adapt prior research findings
- Compare integrated strategies
- Understand transmission dynamics

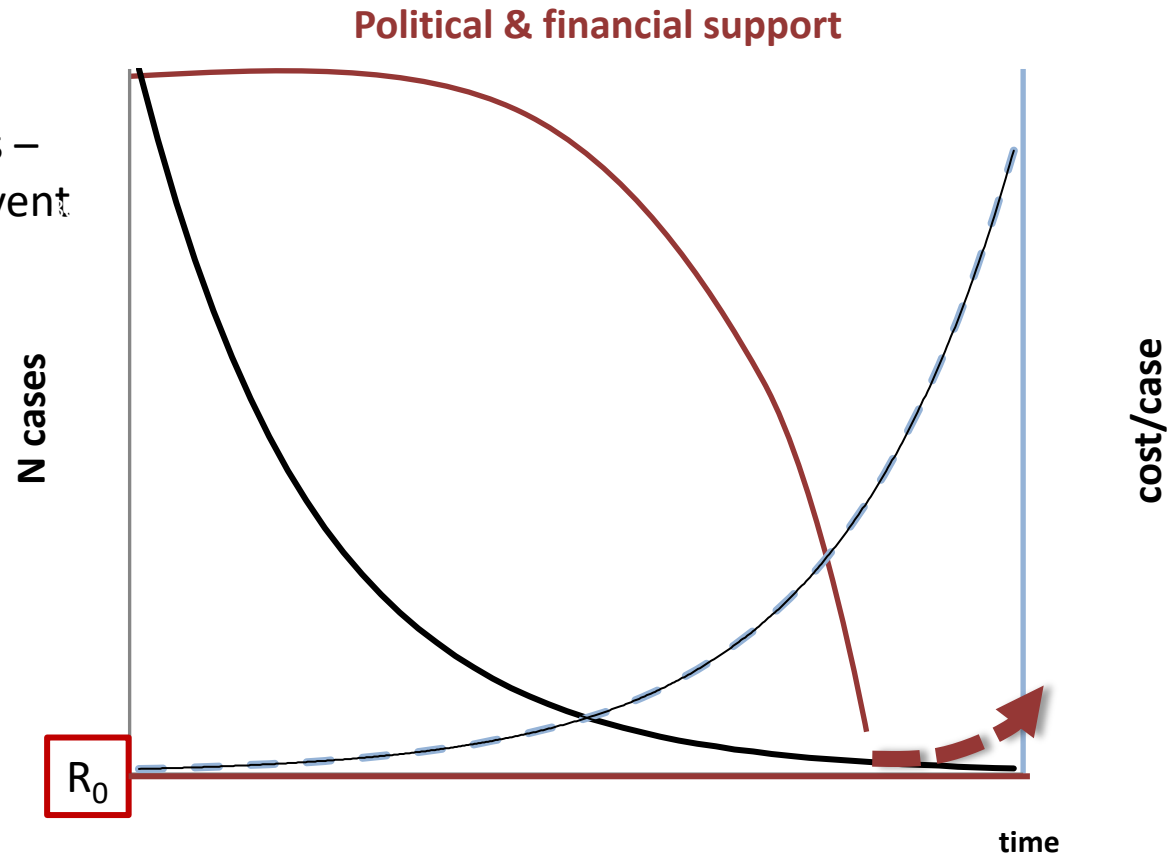

# Tools trigger an elimination programme

## Political decisions shape it

### TRIGGERS

- Disease burden
- Adapted, scalable tools – to diagnose, treat, prevent
- Political will
- Funding mechanisms

### IMPEDIMENTS

- Same tools may not be adapted
- Political will & funding waning

POLICY PLATFORM

## Sustaining visceral leishmaniasis elimination in Bangladesh – Could a policy brief help?

Alyssa Fitzpatrick<sup>1</sup>\*, Noor Saad M. S. Al-Kobaisi<sup>1</sup>, Jessica Beitman Maya<sup>1</sup>, Yu Ren Chung<sup>1</sup>, Satyender Duhan<sup>1</sup>, Erdene Elbegdorj<sup>1</sup>, Sushant Jain<sup>1</sup>, Edward Kuhn<sup>1</sup>, Alexandra Nastase<sup>1</sup>, Be-Nazir Ahmed<sup>2</sup>, Piero Olliaro<sup>3,4</sup>

Tool to assist decision-makers in valuing relevant factors and options, and providing evidence-based recommendations to support the achievement of important public health aims.

# Policy briefs

should be concise, action-oriented and synthesize relevant cross-cutting considerations, such as the economic and political impact of decisions. Should include:

1. Executive summary and recommendation – a brief, high-level overview of the memo.
2. Background – identification of the key issue, and relevant background information to contextualizes the problem.
3. Stakeholder map – a map outlining the key players and their relative priorities. This map can assist the decision-maker in devising strategy and understanding the implications of decisions.
4. Policy options – a range of policy options, alongside their benefits and disadvantages should be presented.
5. Policy recommendation – a preferred policy and rationale should be offered, outlining the key factors supporting the decision.

# Detailed stakeholder analysis of key actors

- Report current activities vs. role in consolidation/maintenance phases
- Categories e.g.:
  - State actors – National
  - Intergovernmental Organizations
  - Non-state actors – including non-governmental organisations and consortia
- Stakeholder map by major role:
  - Agenda setting
  - Funding – Research
  - Funding – Execution
  - Research activities
  - Execution & Service delivery

# Critical issues in the VL elimination programme:

Objective: elimination as 'public health problem'

Definition of the target: 1/10,000 \*

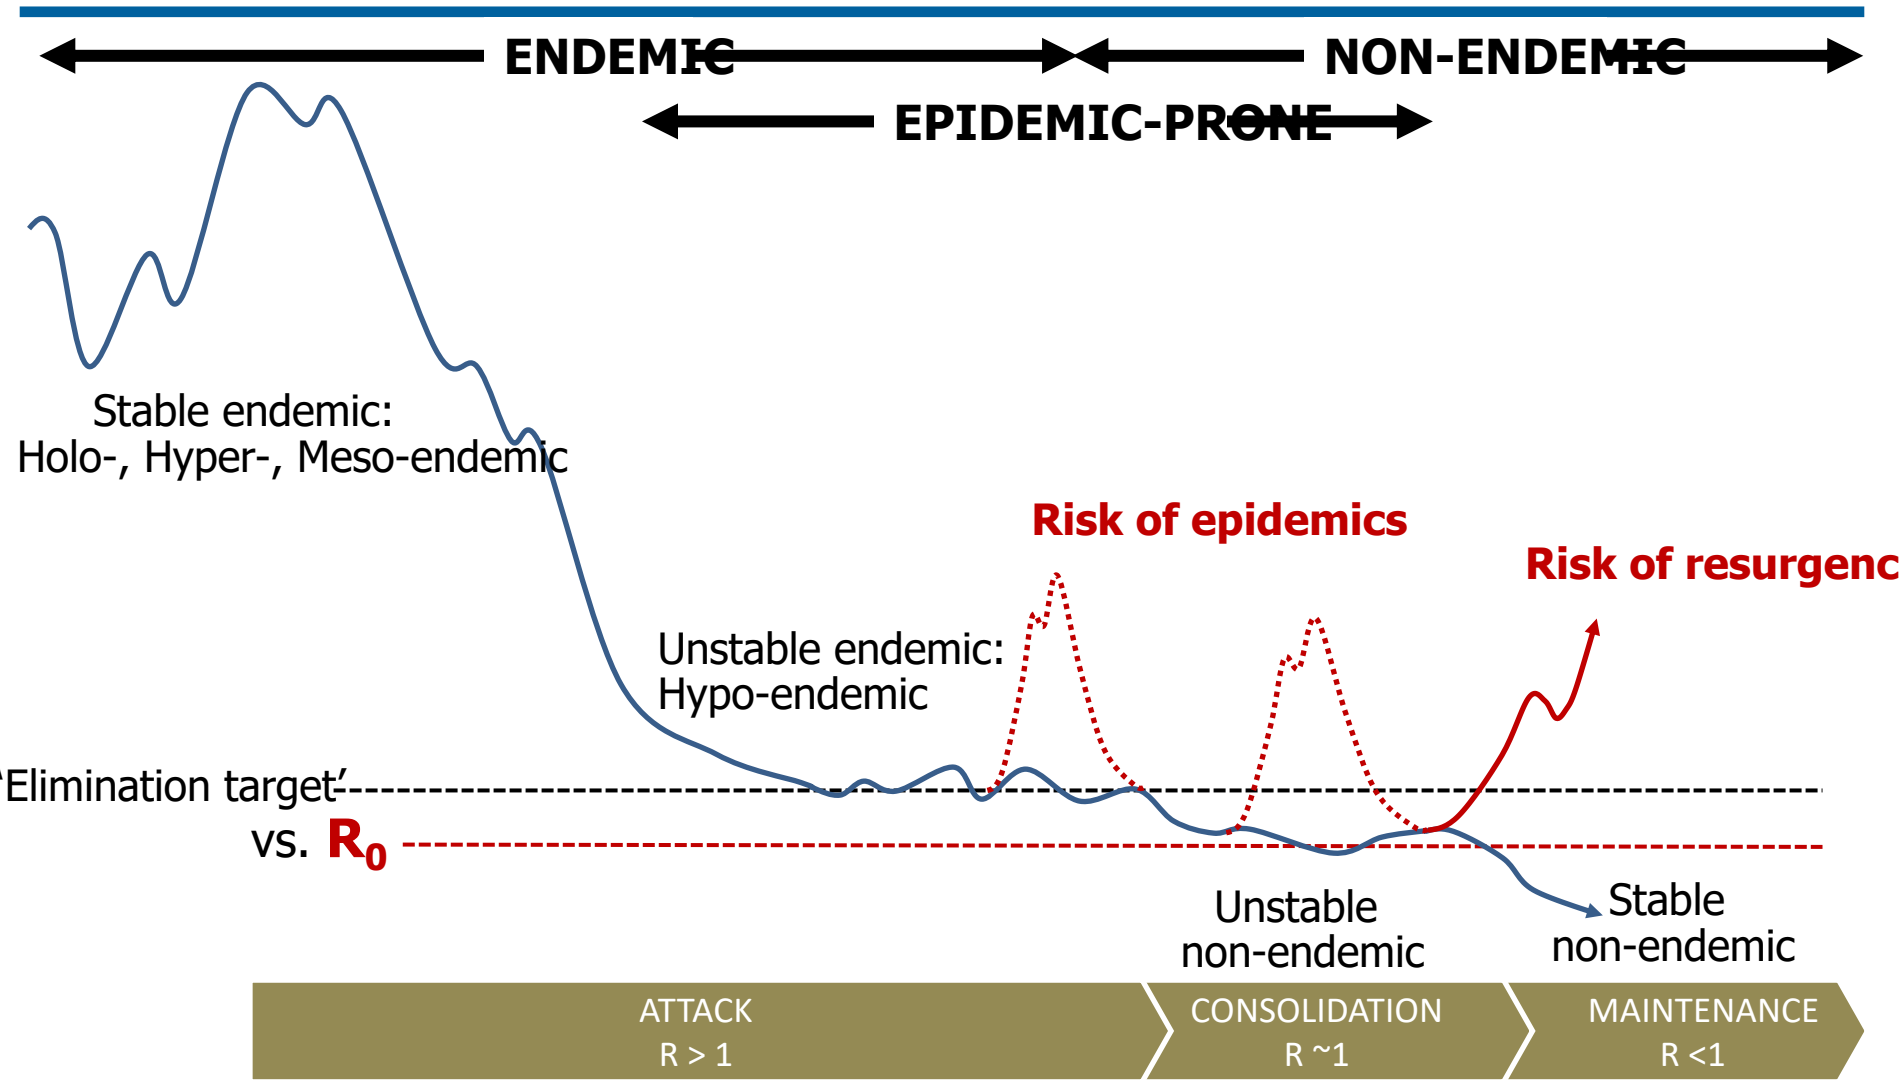

Danger: re-emergence once 'elimination' target reached, if interventions not sustained

*\* Control of a disease or its manifestations to a level that it is no longer considered "a public health problem," as an arbitrarily defined qualitative or quantitative level of disease control.*

*(International Task Force for Disease Eradication (I) 1989-1992)*

# The 'science of elimination'

Partly from Hay et al, LID, 2008

# From research to health impact

## THE BUILD-UP: R&D

## THE DEPLOYMENT: IMPLEMENTATION RESEARCH

## THE APPROACH:

**PARTNERSHIP, CAPACITY STRENGTHENING,  
LOCAL EMPOWERMENT, STEWARDSHIP**

### REACH OUT FOR CASES

Test and compare:

1. Fever camp (+ PKDL, Leprosy, TB, malaria)
2. Index case
3. Blanket house-to-house
4. Incentives to HW (ASHAs, etc.)

### REDUCE MORBIDITY MORTALITY

### PREVENT INFECTIONS

Test and compare:

1. Environmental Mgt.
2. IRS
3. bed nets
4. Wall-lining
5. Wall-painting
6. Performance of NCP
7. M&E tool validation

### Tools to:

- Identify cases: rk39
- Treat cases: LAMB multiple & single-dose, miltefosine, paromomycin; Combinations
- Limit transmission: IRS, bednets, wall painting/lining

### Country Researchers + Control Programmes

Generate research questions

Develop Interventions

Test Interventions

Adoption by National Control Programme

Optimize implementation; Adapt to change

# A two-pronged approach

---

1. Governments, Aid agencies: Don't pull the plug now!  
Intensity efforts and commit to achieve zero-transmission
  - We don't have the perfect tools, but
  - We know what works
  - We know how to deliver them
2. International donors, charities, PDPs: Continue to invest in research
  - Develop better tools: vaccine; easier drug; marker of disease
  - IR/OR

# Changing mind-set

---

- ~~• Preach to the congregation~~
- ~~• Use the science lingo~~
- Understand the process
- Identify key factors, actors and influencers
- Target the message to the audience
- Bring clear, simple solutions

# Thank you
