Fox Hill Lake Management

Main Objective

Reduce the amount of Waterlilies present in the lake while maintaining a healthy and Algae free environment

Secondary Objective

Reduce the amount of Phragmites in the landscape

Plants found in the Lake

Coontail

Milfoil

Phragmites

Watermeal

Waterlily

Spatterdock

Pre 2021 Management Plan switch

- The old management plan focused on Rita Rd Beach Cove, a channel on either side of the island, and the limestone rd cove ONLY
- Clearcast (Imazamox) was the chemical we were permitted for and used. It is a foliar application just like the Phragmites Treatments
- Hard to use, easily washed away
- Clearcast has no impact on other plants Including milfoil, watermeal etc.

2021-2022 Management Plan

- Use Clipper (flumioxazin) to control the waterlilies
 - It will move and spread out better in the water (better plant control)
 - Is one of two products that will kill watermeal
 - Will get rid of the subsurface plants like milfoil

Results

Right Before Initial Treatment

One Week After First Treatment

One Week After Second Treatment
