

Pamphlets

No.27 Economy or Climate

“There is hardly a better way to avoid discussion than by releasing an argument from the control of the present and by saying that only the future will reveal its merits.”

Hannah Arendt, The Origins of Totalitarianism

Very simply, climate change is the Armageddon of the false religion Marxianity. I wrote the following for Not Peace but the Sword; Jefferson Survives and Pamphlet No.4 ‘The Strategy and Tactics of Marxianity’:

As soon as Democratic Socialist Alexandria Ocasio-Cortez could mount a stage to use the megaphone that comes with being elected to Congress she proposed the “Green New Deal” asserting “the world is going to end in 12 years if we don’t address climate change”. It was later learned Ocasio-Cortez’s chief of staff Saikat Chakrabarti told Washington Governor Inslee’s climate director “The interesting thing about the Green New Deal is it wasn’t originally a climate thing at all...Do you guys think of it as a climate thing? We really think of it as a how-do-you-change-the-entire-economy thing”.

The Green New Deal is nothing more than the culmination of a Marxian strategy dating back to the 60’s when neo-Marxists began to openly weaponize academia; first the population bomb, then peak oil, then global cooling, then global warming finally settling on “climate change” to have it both ways. But the goal has always been the same; one of many strategies supplementing the Civil Rights movement as the seminal event in history and the “sexual revolution” designed to undermine the social fabric of America, with all calculated to undermine the Judeo-Christian civil religion, economy, traditions and history of God’s country.

AOC, as Democratic Socialist Alexandria Ocasio-Cortez is now famously known, prompted a radical shift to the far left culminating in a presidential candidate promising anything and everything for votes that would put Marxians in the position of mitigating a climate change Armageddon before the end of the world in just 12 years and in the process gain control of means of production and transportation i.e. socialist tyranny with the goal being replacement of a “rather old” Constitution with a “social justice” blank check.

The assault has begun with the revocation of the Keystone XL pipeline permits and a moratorium on oil and gas exploration on federal lands...and energy independence slips away. Checkmate HaShem; history as it is understood will end in 2026 with a final intervention, think singularity, and a new beginning...not because I say so but the ineffable intellect and power who chose the title God did so in a message written across the tablet of time in the “language of God” mathematics; the Convergence Matrix.

This pamphlet like No.26 Academy and K-12 is heavily laden with articles as recommended reading designed to provide a comprehensive understanding of the issue at hand, in this instance the climate change ruse so as to engage politically. In truth one need only ask two questions to determine “ruse” is applicable: 1) if the ‘climate change’ Armageddon requires a “sustainable world” of 3-4 billion people, how does Marxianity get to that number from 7-8 billion in the short time left?, and 2) why is China exempt from the Paris Accords until 2030 when there are more registered private vehicles in China than in the US and China has 1118 coal fired power plants compared to 225 in the US and building more even as plants are shut down in America?

It is as Saikat Chakrabarti told Governor Inslee’s climate director “The interesting thing about the Green New Deal is it wasn’t originally a climate thing at all...Do you guys think of it as a climate thing? We really think of it as a how-do-you-change-the-entire-economy thing”.

Marxianity in the west is not reticent about its admiration for China or its twin goals of eliminating capitalism and replacing the Constitution with a social justice blank check like that of equally admired South Africa and as such the stronger China becomes the closer to those goals Marxians become. As for the sustainable world of 3-4 billion people Marx was straightforward; eliminate peoples and cultures that did not contribute to history.

Marxism was identified in the Convergence Matrix as evil incarnate and it has morphed into the false religion of human intellectual arrogance in a confrontation with Judeo-Christianity with its own Armageddon, sacraments, bishops, priesthood, ministry, cults and denominations; the final confrontation between good and evil fully engaged with Marxianity now in control of most institutions in violation of the establishment clause.

The institution where Marxianity got its start is the academy where since 1968 and Paul Ehrlich’s infamously wrong book *Population Bomb* the now compromised hard sciences have been churning out equally wrong climate change studies based upon statistics and mathematics which are considered in the aggregate a consensus of scientists agreeing anthropogenic climate change is an existential threat.

Unlike the academic opinions supporting climate change the mathematics of the Convergence Matrix are not only subject to empirical test but in the end irrefutable; matrices identifying 2026 as the year the climate debate will end.

This pamphlet is also the shortest of the 30 in that I have no time to waste trying to convince Americans with yet another article to join a thousand others arguing on side or the other as to climate change. I have taken the time to research and review a list of recommended reading to provide foundation but first the nature of the climate change cult and a brief history from one who knows of the ruse is necessary and as such I have reproduced an article in its entirety for inclusion; *Greenpeace Founder Laments 'Hijacking' of Ecology by Alarmists* by Thomas Williams PH.D.

---Patrick Moore, one of the founders of Greenpeace, laments that the environmental movement has been hijacked by the left, whose goal is to instill fear and guilt into the public.

While Greenpeace started as a science-based organization, it evolved into a “political fundraising organization,” which led to Moore leaving the group 15 years after its founding, he said in an email made public this week by *The Epoch Times*.

Similarly, the Intergovernmental Panel on Climate Change (IPCC) is “not a science organization,” Moore explained. “It is a political organization composed of the World Meteorological Organization and the United Nations Environment Program.”

“The IPCC hires scientists to provide them with ‘information’ that supports the ‘climate emergency’ narrative,” he asserted.

Moore said that environmental campaigns against fossil fuels, nuclear energy, CO₂, and plastic are designed “to make people think the world will come to an end unless we cripple our civilization and destroy our economy.”

Green policies advocated by the left “are not technically achievable,” he declared, as evidenced by Europe’s energy crisis, “which Putin is taking advantage of.”

The crisis is of their own making by “refusing to develop their own natural gas resources, opposing nuclear energy, and adopting an impossible position on fossil fuels in general,” he stated.

Moore, whose formal science education includes a BSc Honors in science and forestry and a Ph.D. in ecology, said that virtually all of Greenpeace’s extensive advertising and fundraising campaigns are based on false narratives, such as that of the alleged polar bear crisis.

“In fact, the polar bear population has increased from 6,000 to 8,000 in 1973 to 30,000 to 50,000 today. This is not disputed,” Moore said.

“But now they say the polar bear will go extinct in 2100 as if they have a magic crystal ball that can predict the future. In fact, this past winter in the Arctic saw an expansion of ice from previous years, and Antarctica was colder during the last winter than in the past 50 years,” he added.

“I believe the human population has always been vulnerable to people who predict doom with false stories,” Moore said.

The environmental apocalypse theory is mostly about “political power and control,” he said, but the actual situation is not nearly as negative as people are told.

“Today, in the richest countries, our descendants are making decisions that our grandchildren will have to pay for,” he said. “Predictions that the world is coming to an end have been made for thousands of years. Not once has this come true. Why should we believe it now?”---

The following list of recommended articles have been separated into categories starting with Climate Change Refutation followed by Governmental Impediments and finishing with a single article under the heading Climate Change in the Schools. It is safe to say that taking the time to read the articles will result in one well read as to the subject of climate change and ready to join a fight that must be won for the sake of those who are faced with making the penultimate choice; choose God or lose all.

Godspeed,

Adler von Pfingsten
