## INTRODUCTION

Allow me to introduce myself. My name is Ronda Johnson, President of Nature's Own Helping America and Company, LLC.

It was once said, "true inventors invent not for themselves, but for the future of others."

Every year, tens of thousands of motorists' vehicles stall out during floods or high-water events leaving them unable to make it home safely to their loved ones because they get stranded in flood waters.

Finally, I have invented a product to ensure drivers a safe arrival to their destination during inclement weather and flood waters!

The **FloodSafe Exhaust System** is a patented, innovative, safety attachment that is **quick and easy to install** on your vehicle. Our patented design includes **heat resistant material** and means to **prevent water from entering into your exhaust** so as to prevent your vehicle from stalling out in flood waters at certain levels.

## BACKGROUND

Living in Houston for 37 years and experiencing for myself being stranded during flash floods, enduring the loss of three vehicles and then another in Hurricane Harvey, I decided to move forward with my idea for a device that would prevent my car from stalling in flood waters again.

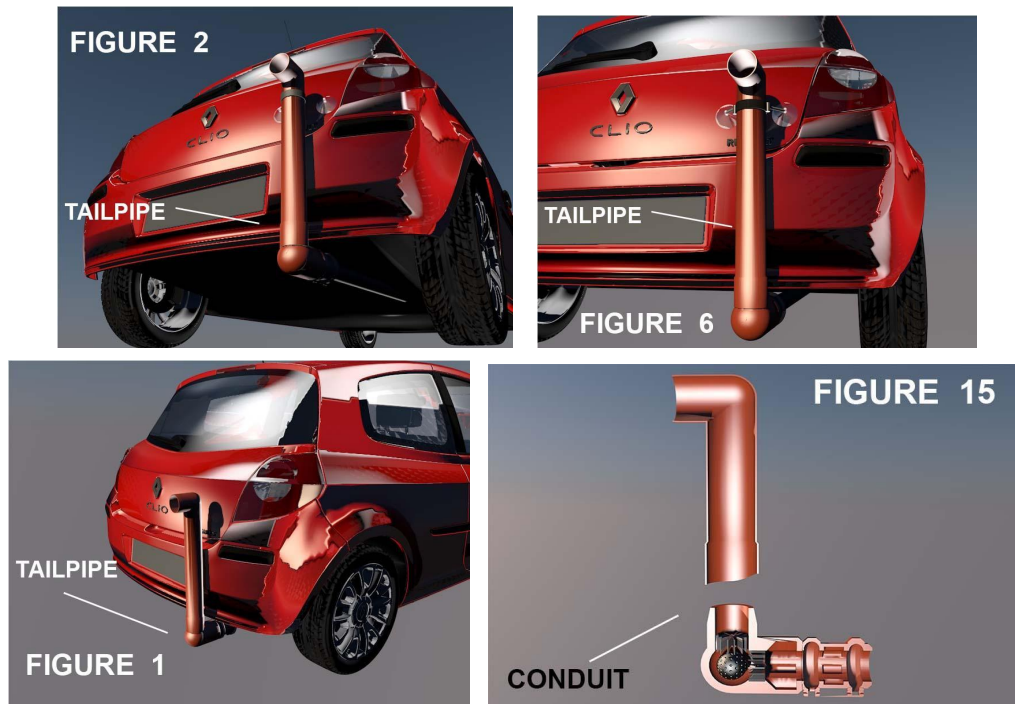

My father was an inventor, a creative influencer, and an entrepreneur. He left behind a legacy for me to follow so I decided I would invent something that could help not just me but also my loved ones and others in my community to arrive at their destination safely.

Once I put to paper my idea, I solicited the help of some engineer friends that could take my idea and manifest it into something that I believe is truly amazing, totally necessary, and **NOT currently available anywhere**.

I began to research and observed that the automobile manufacturing industry is a **trillion-dollar industry** and auto insurance is a **multibillion-dollar industry**. These numbers certainly got my attention but I also realized that **saving lives is priceless!**

This once in a lifetime opportunity is about influencing these industries to make a change that will impact the world for motorists, the automotive and insurance industries, but more importantly, to keep everyone safe who's driving during a natural disaster such as flooding.

Examples of the patented **FloodSafe Exhaust System** are pictured below:

Every year **millions of drivers** lose their vehicles trying to get through rising waters.

Vehicles stall out when water enters the exhaust pipe, usually when there is traffic and a car has to stop in high water to avoid hitting the person in front of them – even emergency vehicles and large trucks have this problem!

Often, emergency vehicles are unable to get through the high water due to so many stalled out vehicles on the roadways blocking the way. All it takes is one quick pause and that emergency vehicle is now stalled like the rest of the vehicles on the road.

What if we could **keep the flow of traffic going** so that **cars won't stall out** or cause other cars behind them to stall out?

My ultimate goal is to provide an **easily accessible, portable, exhaust attachment** that will give drivers and emergency vehicles the confidence to drive through flood waters without the fear of stalling out.

Nature's Own Helping America and Company is currently seeking investment in our company with investors that understand the magnitude of this invention and the future of this company.

The FloodSafe Exhaust System (FES) is the first of its kind and is patented with the United States Patent & Trademark Office (USPTO). We are able to present this product to domestic and foreign countries with the expectation of Nature's Own Helping America and Company becoming a visionary of its time. Our goal is to have domain over all attachments to exhaust systems whether for recreational or safety.

To date, **we have no competitors** and the market is wide open.

Prior to my design, the only way to allow a vehicle to travel through high water was to have a snorkel installed from the manifold of the engine. **No matter the type of vehicle: recreational, sport, automobile, emergency, or military, The FloodSafe Exhaust System (FES) guarantees a quick and easy solution.**

**We also believe The FES can help reduce automobile insurance premiums.**
