

Garden Party When to Plant the Tulip Garden...

Tulip bulbs should be planted in the fall. The soil needs to have cooled off from the summer growing season before you **plant your tulip bulbs**, which could mean September in cold climates or October in transitional climates and possibly even November or December in warm climates. Plan on 9 to 12 bulbs per square foot. For a full look, put 2" to 3" of space between the bulbs. Using a 4" spacing will stretch the **bulbs**, but not look quite as full with a depth of 6 to 8".
