

Organic Tree Care Program

March, April, May:

- Iron Plus – for quick and early green up
- Spreader Sitcker – for even application and prevents wash-off
- Dormany Oil – a superior oil application will reduce populations of scale insects and any overwintering aphids, mites, mealybugs, adelgids and insect eggs
- Holganix specifically balanced organic fertilizers formulated for trees, shrubs, and ornamentals
- Disease controls – canker, scab, rust, diplopoda tip blight, botrytis, phomopsis

June, July, August:

- Insect controls – mites, lace bugs, blackvine, weevil, eastern tent caterpillar, boxwood cillids, aphids, mealybugs, sawflies, bagworms, elmleaf beetle, wooly adelgid, gypsy moth, larve, Japanese beetle, mimosa webworm
- Disease controls – canker, scale, rust, diploidia tip blight, botrytis, phomopsis, leaf spot
- Iron Plus – for deep dark green up

September, October, November;

- Balanced quick and slow release deep-root and/or foliage fertilizers specifically formulated for trees, shrubs, and ornamentals. To help the roots maintain strength for winter hardiness and early spring perk-up
- Vapor guard – anti transparent to protect against winter kill and winter damage. Beautifies plants by polishing the leaf's surface
- Dormant Oils

*Pending Weather conditions

*Coring Aeration optional

Coring Aeration package – Coring aeration is the removal of small cores that allows air, moisture, fertilizers, and nutrients to reach the root system. Aeration can help:

- Water run-off problems
- Stimulate the root system for growth
- Decrease the possibility of insect and disease damage
- Act as a seed bed, when overseeding
- Help control thatch build-up and soil compaction

Deluxe Aeration package – Our coring aeration machine will take cores every 2 ¾ inches apart. Approximately 8 cores per square foot with a penetrating depth of 2 ¾ inches. This package includes a super-heavy seeding of the lawn with 8 pounds per 1,000 square feet of our quality turf grass seeds, that are a blended variety of improved turf-type fescues cultivars custom blended, each with its own unique characteristics. Also, included is a seed-started fertilizer, a very important part of this successful package. We use a high-quality blend of the necessary fertilizers and nutrients 18-24-12, slow and quick release with iron, which assure seeds germinate quickly and establish a strong healthy root system. Also, with this package, we include a maintenance level of pelletized lime. This will help the new grass by raising pH level.

Soil Testing – Soil testing is crucial to helping us understand the needs of your lawn and landscape. Upon request, soil analysis will be taken at the initial service. Soil corrections will only be applied once Easy to Green receives the results from the soil analysis, which will then determine what type of soil corrections will be needed.

Soil Correction –

- Lime – calcite/dolomite – helps to raise and maintain a balanced pH level
- Phosphate – stimulates root growth and seeding development
- Potash – improves drought tolerance and strengthens stem and leaf tissue
- Iron – provides quick green up and helps protect against disease and fungus problems

Irrigation Systems –

- Complete underground system/installation
- Service policies
- Repairs
- Extended warranty
- Monthly check-up visits
- Drip and Micro Xerigation
- Servicing all major brands of irrigation equipment

Drainage Control –

- Downspout extension to divert water flow
- Underground drain grates and piping to help with low areas, puddling, or standing water
- Custom design
- Complete drainage underground systems
- Repairs

Nightlighting – LED Landscape Low Voltage

Enhance the beauty of your home and landscape. Create a warm, pleasant and relaxing atmosphere while adding safety and security. Easy to Green's nightlighting system can handle all your needs from simple economical plans to extensive full-coverage lighting. Like our sprinkler system, it is fully automatic. This L.E.D. low-voltage, durable, lighting will give you security and safety.
