Solutions

## Improved visibility and control at the WAN edge

**DATA SHEET** 

#### Software-defined WAN (SD-WAN) technology is the answer to growing bandwidth demands and tightening

ARUBA SD-WAN

WAN operations and reduced operational costs for those managing public and private WAN connections, and those

budget considerations. New solutions offer simplified

shifting toward cloud-based services altogether. Aruba SD-WAN is designed for all of this and more – optimizing routing decisions and improving visibility across the WAN edge. Full Layer 7 application awareness combines with unique in-branch visibility based on end-user roles,

device type, and location context to make Aruba SD-WAN ideal for distributed enterprises. In fact, organizations in the retail, hospitality and healthcare space – which typically have lean and centralized network teams - can improve the time to deploy, manage and

maintain WAN connections, while enhancing the user experience and business operations. Aruba SD-WAN serves a key role in Aruba's overall SD-Branch solution. INTELLIGENT WAN MANAGEMENT

Through simplified workflows, managing a WAN car be completely orchestrated to improve the speed of deployment, network performance, and ongoing configuration changes. Aruba Central, an Al-powered network operations, assurance, and security platform, provides SD-WAN, as well as WLAN and LAN visibility and controls. Cloud advantages make it easy to to configure and deploy and see data from Aruba branch gateways, headend

gateways, and virtual gateways from anywhere. There is no

## on-premises management equipment to update or maintain.

**CLOUD-BASED SD-WAN ORCHESTRATION** Using cloud-scale best practices, Aruba SD-WAN provides end-to-end orchestration to easily distribute routes and build scalable and secure VPN tunnels on-demand. This is based on the data center preference configured in Aruba Central. The orchestrator also simplifies the deployment of virtual gateways within Amazon AWS and Microsoft Azure public cloud infrastructure by automating cloud discovery, onboarding, and management.

Aruba's SD-WAN gateways are designed to support multiple

WAN connections across broadband, MPLS, and LTE

cellular links. The 9004-LTE gateway includes integrated

hardware-based LTE. All other Aruba gateways support

USB port-based LTE. Software features include the ability

to route and prioritize traffic being sent to the data center,

public cloud infrastructure or the Internet. Each gateway

also supports High Availability (HA) requirements

### **KEY FEATURES** Centralized cloud management High performance branch gateways with ZTP Licenses with unrestricted bandwidth for every SD-WAN gateway

purchases required.

### (e.g. active/active and active/standby), making it ideal for sites that need full redundancy.

offer support for up to thousands of branch sites. In a typical dual hub-and-spoke model, one or more headend gateways can be used to terminate IPsec tunnels established from branch gateways. **SD-WAN Gateways for Public Cloud** Aruba virtual gateways are deployed in public cloud infrastructures, such as a Microsoft Azure Virtual Network (VNET) or Amazon Web Services virtual private cloud (AWS VPC). These gateways serve as a virtual instance of a headend gateway, and enable seamless and secure connectivity for all branch and data center locations

connecting to public clouds. Virtual gateways support public

Internet and private connections such as Direct Connect.

terminate traffic from branch gateways. These gateways

#### Virtual gateways are managed by Aruba Central and include full orchestration that completely automates VNET/VPC

discovery, subnet management, gateway onboarding, HA configuration and status monitoring. Virtual gateways support up to 4 Gbps of throughput, with 1, 3, and 5 year subscription options. SD-WAN Integration with Public Cloud Network Aruba SD-WAN provides orchestrated secure branch connectivity directly to public cloud provider global backbone networks. This greatly simplifies the SD-WAN overlay by connecting branch locations directly to regional points of
