

Let's stop wasting energy.

Thermostats control about half your energy bill, but only 11% of them are programmed to save energy. They're just too complicated.

So we made Nest simple. It learns from you and programs itself. That's why 99% of Nests have custom schedules.

Nest programs itself in a week and turns itself down when you're away. Nest helps you understand how your home uses energy so you can save more.

Learning Thermostat™
Programs itself.
Control from anywhere.

Here's how the Nest Learning Thermostat helps you save energy:

-  **Auto-Schedule™**
No more programming hassles. Nest learns the temperatures you like and programs itself.
-  **Auto-Away™**
Nest automatically turns itself to an energy-saving temp when you're not home.
-  **Airwave™**
Automatically turns off the AC a few minutes early, but keeps the fan running. The air stays cool but your AC runs up to 30% less.
-  **Energy History**
See when heating and cooling were on and what affected your energy use.
-  **Nest Leaf**
Appears when you turn Nest to a temperature that's energy efficient, guiding you to energy savings.
-  **System Match™**
Make sure you're getting the most out of your high-efficiency system. System Match turns on specific features for forced air, heat pump or radiant to help you save and keep you comfortable.
-  **Remote Control**
Connect Nest to Wi-Fi to change the temp or adjust your schedule from a smartphone, tablet or laptop.
