# Recommendation letter postdoctoral fellowship sample

Letter of intent postdoctoral fellowship example. Can a postdoc write a recommendation letter. Letter of recommendation fellowship example. Letter of recommendation for postdoctoral position.

Strong letters of recommendation discuss a student's suitability for a particular fellowship and emphasize referee's involvement with and knowledge of a student. In your letter, explain how the student exemplifies the specific criteria of the fellowship at hand. Comment on how the student will contribute to the particular fellowship program or to the school or academic program the fellowship would support. Also, explain how the fellowship and/or what it enables will make a difference in the candidates' intellectual and personal growth. Before writing the letter Before writing a letter to support a student's application, review the information about the award that is on our website and that the student has provided to you about the fellowship and their proposed project or course of study. The student's statement about his or her interests and goals is important, but following this material too closely can lead to letters that sound the same. Ask the candidate who else is writing a letter of support and what the other writers will most likely emphasize. Having this information will help you write a letter that will complement the other letters. Ideally, an applicant's letters will provide a comprehensive picture of his or her qualities and achievements rather than repeating the same points over and over. Suggestions for the letter Discuss how long you have know the student and in what context. Evaluate the student in relation to other students who are in the field or who have applied for this particular fellowship. Comment on the student's application for this particular fellowship and support the main claims the student makes in his or her application. Cast the student in a unique light, discussing one or two qualities or experiences that make this student especially appropriate for the fellowship. Provide detailed descriptions and evaluations of the student's scholarly work, especially a major piece of research or special accomplishment. If a paper or project was particularly excellent, discuss it and why it stood out. If the student did outstanding work in another area, discuss the work and its strengths, especially as they relate to the goals of the fellowship.

If you have supervised the applicant in research or other activities, explain the significance of the work and the nature of the student's contributions. Logistics Address letters to the person who chairs the fellowship committee if you have that information; otherwise, address the committee as a whole. For example, "Dear Fulbright Committee." The student should provide you with the address to which to send the recommendation. Letters of recommendation for major fellowships are typically one-and-a-half to two pages single-spaced. If you are writing multiple letters for the same candidates, check your final copies to make sure the letter references correspond to the fellowship. A wonderful Luce recommendation that reads "John is a most deserving candidate for a Starr" does not go over well. Close with your signature and your full title or titles (e.g., "Assistant Professor of Chemistry" rather than "Assistant Professor.") Please be sure to keep copies of your letters. If you are submitting letters of recommendation electronically, you will be prompted by the foundation with login and password information. Please hold on to this information until the competition cycle has ended. You may need to access the system at various points in the process. If you are writing a letter for more than one applicant for the same fellowships, be aware that committees will look to see which student appears to be favored. When to say "No." For almost all fellowship applications, generic letters of recommendation harm the applicant. Unlike general purpose letters of recommendation filed with dossier services, letters for fellowship applications need to be tailored to the fellowships for which the student is applying. If you do not have time to prepare a special letter of recommendation for a student, you should decline to write the letter. Say "no" to a request for a letter supporting a fellowship application if any of the following is true: You cannot be emphatically positive in support of a student. You can't recall much about a student beyond his or her presence in your class and his or her recorded grade. You think you are not the best person to write the letter. The student approaches you in a highly unprofessional manner. You do not have the time or the material to write a good letter. A good recommendation letter can help you stand out among other fellowship applicants. You will most likely need at least two letters of recommendation as part of the application process. The best recommendations will come from people who know you well and can offer specific information about you as a student, person, or employee. The sample recommendation letter shown below has been reprinted (with permission) from EssayEdge.com, which did not write or edit this sample recommendation letter. However, it is a good example of how a business recommendation should be formatted for a fellowship application.

To Whom It May Concern: I am proud to recommend a beloved student, Kaya Stone, for your fellowship program.

I was asked to write as one who has functioned in the capacity of an employer of Kaya, but I would first like to say a few words about him as a student. Kaya is a highly intelligent, perceptive young man. He came to our institution committed to capitalizing on the opportunity of his third year of study in Israel, and he left with the satisfaction of having accomplished that goal. Kaya grew in learning, in character, in his depth of understanding. He seeks truth in each area of his life, whether in learning, discussing philosophy, or relating to his fellow students and his teachers. Because of his positive disposition, his reflective way of operating, and all of the character traits that make him so special, Kaya's questions never go unanswered, and his searches always bring him to exciting discoveries. As a student, Kaya is outstanding. As an educator, I have watched him grow, seen his talents and abilities not only in the classroom but outside its walls when interacting with all types of people as well. During his time at our institution, Kaya, who as I'm sure you know is an excellent writer and publicist, also has done a good deal of work for the yeshiva.

This has included the text for many public relations brochures and packets, letters to parents, potential donors, and alumni, and essentially any correspondence which I have requested that he compose. The feedback is always overwhelmingly positive, and he has done so much in that way for our yeshiva. Even today, while he studies elsewhere, he continues to do a great deal of this work for our institution, in addition to the recruiting and other services he performs for the yeshiva.

Call for Postdoctoral Fellowships at the University of Maryland Center for Machine Learning

The University of Maryland Center for Machine Learning—officially launching in late March 2019—is searching for exceptional candidates for **Postdoctoral Fellows** in theoretical and practical areas of machine learning and deep learning. Successful candidates will primarily work with faculty members in the ML center while becoming part of a growing interdisciplinary ML ecosystem at the University of Maryland.

Eligibility and Funding
Applicants should have a Ph.D. degree (or an expected Ph.D. degree) in Computer Science or a related discipline (Engineering, Math, Statistics, etc.) with a strong theoretical and computational record. Applicants should be highly-qualified individuals interested in developing productive research collaborations within the ML center and across the UMD campus.

Application Process
Those interested in becoming an ML Postdoctoral Fellow are asked to submit a single-page cover letter, a CV, a two-page research statement and a list of three recommendation letter writers **by April 15**. These documents can be sent to *sfeizi at cs dot umd dot edu* as a **single** PDF file with the subject line of "Postdoc Application ML."

About the UMD Center for Machine Learning
The University of Maryland Center for Machine Learning is an interdisciplinary center focused on both basic and applied research in machine learning. Faculty in the center are from the Department of Computer Science and the University of Maryland Institute for Advanced Computer Studies (UMIACS). Other researchers from across campus in areas like chemistry, physics, biology and linguistics are expected to collaborate through affiliate appointments. The Center is supported by UMIACS and will be located in the new Brendan Iribe Center for Computer Science and Engineering.

Always, in his work, Kaya is consistent, dedicated and passionate, enthusiastic, cheerful, and a pleasure to work with. He has incredible creative energies and a refreshing idealism tempered only enough to accomplish what needs to be done. I highly recommend him for any position of work, leadership, education, or any other capacity in which he can spread his excitement and share his talents with others. At our institution, we are expecting big things from Kaya in the way of educational and communal leadership in the years to come. And knowing Kaya, he will not disappoint, and probably will exceed our expectations. Thank you once again for the opportunity to recommend such a special and impressive young man. Sincerely Yours, Steven RudensteinDean, Yeshiva Lorentzen Chainani
