

What is

Jet Plasma?

The Jet Plasma Pen is a handheld plasma device that uses a cooler atmospheric temperature, so it does not create surface trauma like traditional fibroblast plasma.

This extremely powerful device penetrates 14.88kV (kilovolts) of plasma through the epidermis, into the dermal and subcutaneous layers of the skin stimulating high levels of collagen and remodeling the cellular structure from the inside out.

When Jet plasma is mixed with oxide oxygen, ozone is created which kills surface bacteria and is anti-inflammatory to aid in calming keratosis, eczema, and rosacea.

Jet Plasma is used to tighten the skin, diminish wrinkles, diminish hyperpigmentation, treat acne, scarring, stretch marks, and aids in product absorption that otherwise would not be possible without needle injection.

BENEFITS

- ▶ FDA Regulated and CE Approved
- ▶ No pain
- ▶ No numbing
- ▶ No downtime
- ▶ Safe for all Fitzpatrick skin types
- ▶ Incredible results, 14.8% after one treatment!

WHAT CAN JET TREAT?

- ▶ Wrinkles
- ▶ Hair loss
- ▶ Stretch marks
- ▶ Acne - active + scars
- ▶ Scarring
- ▶ Hyper-pigmentation / Melasma
- ▶ Excess skin due to loss of elasticity
- ▶ Eczema, Psoriasis + Rosacea

SESSIONS

- ▶ Additional treatments performed 48-72 hrs. after first treatment or 1x per week recommended
- ▶ Series of 3, 5, 6 or 8 sessions is recommended - session takes 15-20 minutes

Jet Plasma

**THE GAME CHANGER IN
THE PLASMA INDUSTRY!**

The Jet Device & Plasma

Jet Plasma is the most advanced plasma technology available. We are the first to introduce a progressive technology of this kind, which has revolutionized the Plasma industry.

Plasma is the fourth (4th) state of matter; it is an ionized gas made of free electrons and positively charged ions. An example of Plasma is the Sun/stars.

The Jet Plasma Device contains three (3) different plasma gases - CAP (Cold Atmospheric Plasma), J Plasma, and Ozone Plasma.

01

CAP (Cold Atmospheric Plasma)

- cold plasma is created in short bursts

02

J Plasma (AKA Jet)

- helium converted to plasma gas

This conversion is done through the tip of the Jet, which is like a micro-computer. The machine does not require a nitrogen installation since many components in the air are composed of nitrogen. Through the tip's consumable, it can react comprehensively to achieve the desired effect, which is why you can see it emitting blue flames. This tip's consumable contains precision technology circuit boards. The combination of silica gel and ceramic sheet can just stimulate a flat flame.

03

Ozone Plasma

- oxide oxygen mixed with J Plasma creates Ozone Plasma

Ozone plasma has anti-inflammatory and healing properties which is why it's able to calm and heal the surface so quickly. This is extremely beneficial for skin issues like rosacea, keratosis, eczema, psoriasis etc.

Additionally, the Jet Plasma Device has micro-current which tightens muscle.

The Jet Profosma Pen has **two (2) modes**, pulse and continuous, our protocol teaches use of both modes for best results.

01

PULSE MODE

is where we control the depth we send the Plasma energy, reaching the subcutaneous tissue and stimulating high levels of collagen. This also allows us to target the deepest wrinkles, stubborn acne, and inhibits pigment by diminishing hyperpigmentation/melasma.

02

CONTINUOUS MODE

covers a wider area of the skin, remodels the cellular structure, improves skin texture, and tightens loss of elasticity.

In addition, Jet Plasma creates micro-channels in the scalp, which trigger the body's natural defense to promote the healing process. This prompts the release of hormones called growth factors, which stimulate new blood vessels to grow in the area. These blood vessels carry more nutrients and oxygen which contribute to new hair development and will help reverse hair loss. We have seen dramatic improvement with male and female pattern hair loss, even hair loss related to Covid with Jet Plasma. Jet Plasma will stimulate hair regrowth on its own or it can be used with a hair serum immediately after a treatment.

Results typically last 2 - 4 years. If we could stop the aging process from the day the treatment/procedure is done results would last forever, but that's not a real-life possibility.

For younger clients Jet Plasma is a preventative because it can slow cell necrosis to an extent, which slows the aging process.
