

Good guys won't try to fool you. Only bad guys do that.

Perhaps you have, as I have, done the homework and found that America – indeed, much of the world – has been fooled.

Bad guys did that.

Mark Twain said, “*It's easier to fool people than to convince them that they've been fooled*”.

Now, it's up to us good guys to do the hard work of convincing people that they've been fooled.

The thinking mind asks, “About what do you think I've been fooled?”

Are you sitting down?

Here is just a short list of just some of the deceptions to which you've been subjected in the last two years (am I really saying that it's been two years!?!? ugh).

1... Corona virus is NOT a deadly disease. Corona virus is a normal respiratory virus that's been around and known forever. There. Is. No. Novel. Corona. Virus!

What is nasty about this C-19 corona virus is the spike protein that they attached to it, in a lab someplace... UNC Chapel Hill, Wuhan Institute of Virology, Ukraine... who knows where. We don't have to speculate about why... this kind of research is called Gain of Function research, designed to make pathogens more virulent (functional).

But back to the virus itself... when you get the spike protein poisoning, which is more like a poisoning of the blood than a respiratory virus, they don't allow doctors to treat you. “*Go home and wait 'til you can't breathe and then come back. Then we'll admit you and give you Remdesivir...*” which was taken off the market for a 58% mortality rate during clinical trials, “*... and then we'll ventilate you...*” which results in an 85% mortality rate. Known, safe, longstanding licensed drugs, successfully re-purposed for treatment, are not allowed despite thousands of doctors all over the earth using them successfully. And just to make the cheese more binding ... hospitals got a financial incentive for a C-19 diagnosis, another financial incentive for a C-19 hospital admission, another for Remdesivir prescription (approximately \$4,000 per dose), another financial incentive for being put on a ventilator, another financial incentive for a C-19 death, and another for the death certificate labeling it a death “with” a positive C-19 diagnosis. From admission to death, hospitals average \$100,000 financial incentive per C-19 patient who dies.

2... Asymptomatic transmission is a categorical, demonstrable, scientifically proven, lie,¹ and prior to this test-demic, was never espoused by any medical community, ever, anywhere. Period.

3... The mRNA (the “m” stands for messenger) injection forces one's body to produce spike protein, by delivering a *message* to your cells to have your DNA altered such that your own body begins expressing the S1 spike protein. It is the spike protein (syncytin-1) that is the only thing that made/makes covid-19 tough to deal with.² Corona virus is no big deal, especially for the young and/or healthy. It's the spike protein, which is then after injection, being produced by your body, which is as bad as the spike protein on the “wild” virus.

4... Have you not ever seen and heard the pharmaceutical ads on the TV? Of course, you have. Toward the end of the commercial, as you're watching the disease-afflicted living a normal, healthy, fun-filled life, a soft voice is speaking in the background, just below the cheerful music... “*Side effects*

1 Michael Yeadon, for Pfizer VP and head of Pfizer's respiratory disease division <https://rumble.com/vg4inv-michael-yeadon-full-interview-planet-lockdown.html> <https://www.nature.com/articles/s41467-020-19802-w>

2 <https://tube.source.news/w/bVzKPofzKodFZazokCU8QC>

could include pimples, ugliness, anal fissures and death. Tell your doctor if you're breathing.” {sarc}

There is NO informed consent for the administering or receiving of any medication without the recipient being informed of possible side effects! That's why the commercials all have those disclaimers in them!

Yet when anyone speaks of the known as well as potential side effects of the experimental (still in clinical trial until Spring 2023 and only now available under Emergency Use Authorization - EUA) mRNA shots, they are accused of causing vaccine hesitancy or of being an anti-vaxxer or a conspiracy theorist.

Therefore, there is no informed consent. You're not allowed to be informed.

Are you OK with that? I'm not.

Informing the injection recipients has long since been abandoned ... the ingredients list on the shot's Material Safety Data Sheet (MSDS- the document that's included in the box with each shot) is blank and states clearly that it is "*intentionally left blank.*" The ingredients have not been disclosed; the manufacturer is actually requesting 75 years³ for full information release.

5... The story that FDA has approved the shots is a total lie⁴. What was approved was the European “twin sister” of the Pfizer shot known as Comirnaty. *It* was approved while the Pfizer EUA got another extension. Comirnaty does not, however, exist. No samples of the shot were ever forthcoming and made available for analysis (as required by law within 15 days of approval) to the FDA and the shot itself is not available anywhere in the United States; and nowhere else on earth either. The Pfizer shot that's being called “identical” and thus being *substituted* for the “approved” shot is still available ONLY under the EUA.

And none of this even mentions the face-mask fiasco! If masks can stop the spread of these “airborne” things, why don't people rely on them during allergy season? Grains of pollen are many, many times the size of a corona virus. Trying to stop a corona virus – really, any respiratory virus – with a mask is like trying to stop a mosquito with a chain-link fence. Literally.

And don't get me started on testing, all of which has been fake, phony and fraudulent! The inventor of the PCR test told everyone that it was never intended to, and was wholly inadequate for disease detection. He won a Nobel prize for that test, but he died mysteriously in 2019.

The home test tells you that if you have one negative result, you have Omicron. If you have two negative results you have Delta. Really?

These are *some* of the areas of deception to which you have been subjected.

The question is, “Have you had enough?”

Your tax dollars have funded all of this, and have also funded the “cure.” That cure by the way, is hurting and killing people; and 70% of all new hospitalizations are of those injected and boosted. Had enough?

Here's truth by which you will not be deceived.

In order to influence behavior, civilized men use reason, information, persuasion and discussion. Coercion on the other hand, falls to the realm of the barbarian.
