

**Carpenter Bee**

**Carpenter Bees (16 – 22 mm)**  
Black body with yellow and black bands  
Dense hair on head and thorax  
NO HAIR on abdomen  
Broad head, thick body  
Males have yellow to white coloring on face, females all black on face

**Bumble Bee**

**Bumble Bees (10 – 19 mm)**  
Black body covered with dense yellow and black hair  
Fat bee with small head  
Large thorax and abdomen  
Hairy abdomen

**Honey Bee**

**Honey Bees (12 – 15 mm)**  
Brown or black stripes on body  
Golden-brown hair covers abdomen

## BEES

**Small Bees (Any bee smaller than a honey bee)**  
Can include: Leafcutter Bees, Sweat Bees, and others

Note: Keep a lookout for the metallic shine of the sweat bees from the family Halictidae. Even though these bees can be small, the metallic color is easy to spot when the sun is shining on them.

## FLIES

**Syrphid Fly (Bee mimic)**

*Photo credit: Washington State University*

**Flies**

**(6 – 13 mm)**

Have two wings instead of the four wings on bees and wasps

Eyes are large and take up most of the face

Small antenna

Note: Some flies are bee mimics. They have bee-like coloring and will visit flowers. The large eyes and small antenna will confirm you see a fly.

## BUTERFLIES & MOTHS

**Gulf Fritillary Butterfly**

**Eastern Tiger Swallowtail Butterfly**
