Toward a Proactive Intelligence Approach

Staying PROACTIVE

The threat landscape is constantly evolving. Illicit actors are opportunistic and constantly on the offensive. Staying ahead of threats is key to ensuring protection, business longevity, and community safety. We help our clients understand emergent threats, mitigate risk, and provide the latest proactive technology solutions, services and professional training that address their priority intelligence requirements.

INTELONYX
BE PROACTIVE

We Love INTELLIGENCE

We are enthusiastic about protecting people and assets. We've built a fantastic family of specialists & partners with decades of collective experience in protecting people, networks and infrastructure. With a proven track record in advancing the security mission of government agencies, financial institutions, VIPs and others, we believe that Intelonyx carries the right solutions and services to assist your organization in optimizing its security posture.

Why We're DIFFERENT

We don't subscribe to a reactive approach. We don't believe in one-glove fits all. We believe that intelligence is human first & technology can't solve problems without continuous adaptability to the evolving threat landscape. Our model centers on a programmatic approach that relies on deep understanding of intelligence requirements and addressing them with tailored services and solutions. We provide holistic intelligence solutions and architecture that confront today's most challenging security problems.

Intelligence Solutions

Dark Web Intelligence
- Mitigate risk from threats emanating from criminal activities such as Hacking, Fraud, Malware, and Terrorism with access to and insight from the world's largest Deep and Dark Web data base

Risk Intelligence
- Obtain actionable intelligence, including finished intelligence reports, raw data, customized dashboards and alerting, on physical and cyber threats, and take actions to protect data and assets

Open-Source Intelligence (OSINT)
- Access intelligent tools that enable investigators and analysts to extract valuable & meaningful intelligence & insight from publicly available information and investigate criminal activities

Tactical & Operational Intelligence
- For government agencies, obtain awareness of threats and conduct investigations with higher visibility into activities of potential criminals, especially designed for mission-focused teams and units

Military Tech
- Vehicle-borne & body worn tech that enable deployed military units to enhance communications & monitoring ops, including weatherproof Mesh products, vehicle & drone-borne IMSI Catchers, Interception & Jamming

Advanced Outreach Tools
- A set of tools that help political, health and investigative campaigns understand the Internet, and apply AI-powered intelligence through media buying and strategy, and defensive techniques

Advanced Data Analysis
- Empower teams from the public and private sectors to conduct data analysis & analytics with access to data-agnostic technologies, extracting insight from structured & unstructured data

Anti-Surveillance System
- Mobile, all-in-one AI video analytics solutions for security observations & real-time detection, designed with government security operations & protective details in mind, including VIP protection and secure couriers

Anti-Eavesdropping System
- Top-tier stationed & intelligent Eavesdropping/Bugging device detection system that scans and detects suspicious & potential audio & video bugging device frequencies 24/7

Social Media Intelligence (SOCMINT)
- Location based social media intelligence, enables organizations to identify & understand the conversations & trends behind social media posts and the people who drive them, empowering organizations to make more informed decisions & take more effective actions

Encrypted Communications & Tracking
- Military-grade encrypted communications & tracking solutions, enabling real-time collaboration. Decentralized and on-premises, providing virtual command platform, field operations connectivity and enhancing community safety

Lawful Interception
- Government agencies can obtain the tools to cost-effectively conduct active and passive lawful interception & data handover for any type of network.

Professional Services

- A team of intelligence experts to architect an intelligence program with tactical and operational systems, including software and hardware, creating a robust system for achieving intelligence missions

Intelligence Program Architecture for Government Agencies

- Professionals with decades of experience in building cyber threat intelligence programs, from evaluations, to gap assessments, to training and full processes, maturing existing infrastructure

Cyber Threat Intelligence Buildup

- 360 degrees cybersecurity services, including Security Operations Center (SOC) building and management, pen-testing, security audits, virtual CISO, anonymity systems, and Red Teaming

SOC Buildup & Management

- Implementation of policing systems such as sustained police strategic leadership development and operations training in investigations, to counter terrorism and forensics, to design and implementation

Policing Systems

- The right consultants to provide insight and guidance on real cases, including terrorism and terrorist financing, online profiling and monitoring, child sexual exploitation, human trafficking & smuggling and cyber attacks

Government Case Consulting

- Building border security and management systems, through developing specialized police intelligence units to training counter narcotics forces

Border Security Management

- Full intelligence analysis and customized reports on a range of security matters including threat actors and activities, geopolitical & conflict situations, and cyber attacks

Intelligence Analysis

- Training for government agencies on running & handling sources & informants, including surveillance, crisis management & contingency, deceit detection, photography, technical & communications skills
