# PRESS RELEASE

## Platinum Announces the Launch of Pantheon Design™: Revolutionizing Global Supply Chains via Generative AI and Autonomous Hyper-Automation

Pantheon Design™ today announced its official launch as a subsidiary of Platinum Business Services LLC, delivering revolutionary next-generation Forge capabilities designed to help government and enterprise organizations solve complex parts delivery and supply chain sustainability challenges.

Pantheon Design™ is a next-generation remote 3-D printing Forge that fuses Robotic Process Automation (RPA) with autonomous and generative Artificial Intelligence (AI) and Machine Learning (ML) to empower hyper-automation. Pantheon redefines how parts are produced and how agile supply chains are sustained in forward-operating environments. Pantheon's unique capability lies in orchestrating fully automated, self-optimizing additive manufacturing pipelines (metal and composites) that integrate advanced design, production, and quality assurance into a single intelligent, self-sustaining 3-D printing ecosystem. Pantheon enables sophisticated autonomous-supported parts delivery and a rapid replacement supply chain, ensuring that mission-critical components are fabricated and deployed with unprecedented speed and precision. With a full complement of advanced software and design 3-D tooling, we empower organizations to maintain operational readiness even in the most austere or dynamic conditions.

### Transforming Additive Manufacturing through Hyper-Automation

Pantheon's unique capability lies in orchestrating fully automated, self-optimizing additive manufacturing pipelines for both metal and composites. By integrating advanced design, production, and quality assurance into a single intelligent, self-sustaining 3-D printing ecosystem, Pantheon enables:

- **Autonomous Parts Delivery:** Facilitating a rapid replacement supply chain to ensure mission-critical components are deployed with unprecedented speed and precision.
- **Operational Readiness:** Empowering organizations to maintain functional capabilities even in the most austere or dynamic conditions through a full complement of advanced software and design 3-D tooling.
- **Scalable Efficiency:** Engineering high-efficiency solutions that integrate seamlessly with existing high-performance environments to unlock transformational capabilities across mission-critical applications.

Backed by Platinum Business Services' proven experience in cybersecurity, cloud, and enterprise IT, Pantheon Design™ operates with a focused mandate to accelerate innovation while maintaining the rigor, security, and compliance required by government and critical infrastructure customers.
