## Junior Web Application Developer

### Who are we?

Our mission at FutureWork Systems is simple: we help people in government easily tap their data to facilitate data insights and discoveries to support effective and efficient program and policy decisions. We do it by designing, developing, and delivering intuitive SaaS BI web applications in support of US Department of Labor employment and training programs to democratize program data. We have been successful for over 20 years.

Every day we work closely with individual government clients at the local, state, and national level delivering our customized BI technology application services to empower them with data to support the important work they do. We know that what we do helps them help the people they serve in their communities. This fuels our team's never-ending continuous innovation efforts to build better web applications and the services to support them.

If you get excited about Web technology's ability to improve the lives of others and would like to use your skillset to make it happen, we want to meet you. This is an exciting opportunity to join our team.

### Who do we need?

We want a *Junior Web Application Developer* with at least 1-3 years front and back-end web development experience to join our team. We want a person who is well-versed in web application front-end design with a solid understanding of back-end technology and can back it up with examples of their work. We want someone who understands and has an eye for modern UI and UX concepts and the development skills to see them to the finish line. We want an innovator and problem solver who stays on top of the latest technology movements, always on the lookout for ways to bring new innovations to our applications and to our team.

### What will you do?

You will play an active role in the design, development, and maintenance of all web application services provided by FutureWork Systems. You will be working with the development team, participating in all aspects of the development process, while at the same time learning how to convert business requirements into application features and enhancements that improve our client application experiences. You will have ample opportunity to leverage your expertise and build upon it.

**Job Type:** Full-Time; Remote

### **Education & Experience:**

- AS or BS in Computer Science/Computer Engineering or related fields
- 1-3 years of experience in web application development

### **Technical Skill Requirements**

- Experience with C#, .Net Framework 4.5+, SQL, and Visual Studio 2015+; SSAS a plus
- Proven knowledge of HTML, CSS and JavaScript. (jQuery, Bootstrap experience a plus)
- Experience implementing and supporting responsive designs
- Good understanding of asynchronous request handling, partial page updates, and AJAX
- Experience with content management systems
- An understanding of integrations with external data sources and data flows (SQL databases, JSON, XML and APIs)

### **Benefits:**

- Competitive salary commensurate with experience
- Medical, dental and vision Insurance
- 401K (employer matching)
- Virtual Workplace – *we strongly believe in a healthy work/life balance.*
