INTUIT quickbooks
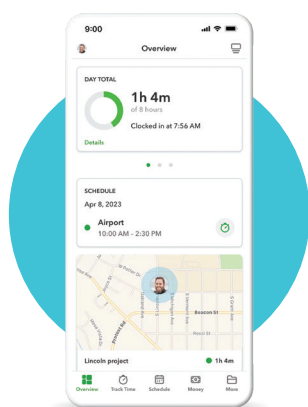

QuickBooks Time: Time tracking software built for your business

Save **2 hours** on every payroll run[1], reduce payroll costs over **4%**[2], and add over **10%** more billable time to your invoices[3] with QuickBooks Time.

Track time on the go with mobile app

Breadcrumb trail

QuickBooks Time can track your employees' location in real time throughout their workday, displayed as a breadcrumb trail.

Geofencing*

Geofencing reminds employees to clock in or out when they enter or exit a project zone.
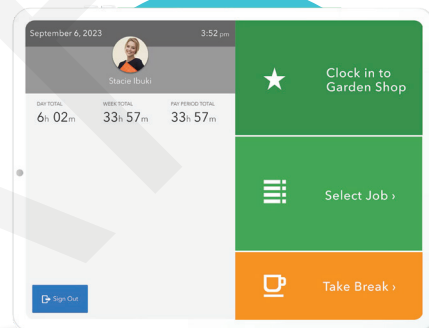

Crew clock

A supervisor can clock in their entire crew to jobs, phases, codes, and more all from a single device.

Signature capture* and jobsite photos

Signature capture allows your mobile workforce to capture signatures for approval, verify deliveries, or obtain patient or guardian signature for home healthcare visits. Employees can take live photos on their camera roll and then upload them to attach to their timesheets.
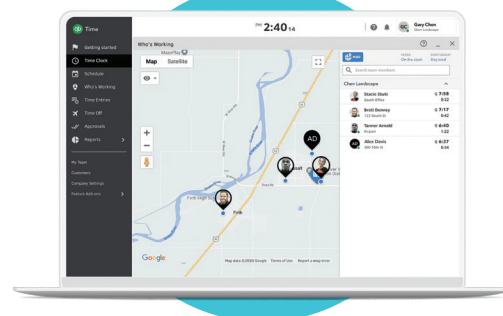

Clock in/out on site with kiosk**

Employees can track time via tablet or iPad. The tablet with clock-in selfie feature can location track now as well. This avoids "buddy punching" or time theft.

See who's working and their location

Based off GPS location, QuickBooks Time allows you to automatically track how many miles employees traveled to and from various jobs throughout the day when they are clocked in*. Employees can be sorted by clock-in time, total hours, location, and jobs, making it easier to locate an employee.

Explore all you can do with QuickBooks

QuickBooks Online

- Organize and manage bills online so you always pay on time.
- Track expenses across all your various accounts.
- Calculate tax deductions to ensure you get all you deserve.
- See which projects make money and which ones cost you money.
