# GRAINSENSE - KNOW THE QUALITY OF YOUR CROPS FOR BETTER PROFITS AND A SUSTAINABLE FUTURE

Where should I sell my harvest? As fodder or to the flour-mill? Am I getting the right price? Am I paying the right price for the cereals I buy? How much protein am I feeding my livestock?

Measure the quality of your harvest directly with GrainSense and make secure decisions based on data.

## On-site proof of quality

In just a few seconds, you get a quick measurement of :

1. **PROTEIN CONTENT** – the most important factor for livestock and cereals farmers.
2. **MOISTURE** – lighter, and faster measurements than before.
3. **OIL CONTENT** – an important factor for oilseed cultivation.
4. **CARBOHYDRATES** – a key component for the industry.

## Manage your harvest based on data

- Gather knowledge about your cereals; what do you buy and what do you sell?
- Sort your cereals harvest in your silos by quality.
- Measure the quality of the cereals prior to harvesting.
- In what order should I harvest? The rains will soon be starting, which field should I begin harvesting first?

## Quality measurements in the field

- Obtain your measuring results whenever and wherever you need them – at the silo, at the thresher or at the drying facility.
- Patented optic measurement and continuous calibration update.
- Secure saving of your data in a cloud service.
- Small sample size – just one small cup is enough.
- High standards for performance and design.
- Easy to use and ergonomic.

Developed in close cooperation with farmers and agricultural experts.
