OPTIONS*

- Residential cleaning kit
- Head pillow
- Lumbar pillow
- Protective pad
- Non-skid leg levelers

Additional lead time may apply for some options.

*Additional charges apply for all options.
1. Batteries not included.

Engineered for comfort and durability, the LC-108 Infinite- Position Power Lift Recliner from Pride[®] reclines to a full reclined position that elevates the legs above the head for maximum comfort and relaxation. The stylish LC-108 is available in eye-catching fabric selections sure to enhance your home's décor.

LC-108

Designed for ultimate comfort and adjustability to meet individual needs

The LC-108 is equipped with adjustable and removable components to allow for a custom fit and easier care and maintenance of the product.

Adjustable, removable back cushion

- **The individual pillows of the back have zippers** to access the fiber fill stuffing. The stuffing can be added or taken away to customize the fit and comfort of the back cushions. This is especially helpful with accommodating a user that has a kyphosis. For users with longer legs, stuffing can be removed from the back cushions to increase seat depth, offering better overall comfort and support for the legs.
- **The individually tethered pillows** of the back allow them to move with the client when going into or coming out of recline to reduce shearing and shifting.
- **The standard wing back design** makes it possible to insert additional support along the side to address issues with hemiplegia or stroke. The wings also work as a safeguard to keep users from falling beyond the sides of the backrest.

PILLOWS

Adjustable, removable chaise pad

- **The chaise pad is fully removable** and the foam fill can be removed. This will allow for hand washing and hang drying of the seat cushion should it become soiled. The foam fill must be removed during washing. Moisture can cause damage to the foam.
- **Access to the seat cushion** also gives the ability to insert seating options to address pressure or comfort concerns.
- **The full chaise pad** provides a continuous support surface for the entire length of the seating surface, reducing pressure points and allowing for maximum comfort and relaxation.
- **Seating wedges or components** can be put between the seat box and chaise pad to correct postural seating concerns.

Additional Features

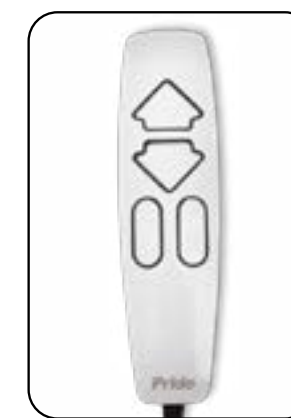

- **Both the seat and back cushions are replaceable** as parts should it be necessary due to wear and tear, increasing the life of the chair. (Note: Over time fabric fades and with different dye lots of fabric, replacement parts can sometimes differ slightly in color).
- **Push-button hand control standard** that allows for independent positioning of the leg rest and back angle. This control is also equipped with an all-up button that, when depressed, will lower the legs, raise the back and then lift the chair to the transfer position all in one continuous motion. The hand control has a quick disconnect feature in the side pocket to disable the functions of the control. There is also a built in USB charging port for portable devices.
- **Low-shear recline back standard provides** minimal shifting when going into recline and less forward force on the client when coming out of recline. The tethered pillows shift reducing the shear affect.
- **Fully landscaped arms** provide a continuous, even arm support surface with no ridges or transitions in height. This offers better comfort and arm support.
- **The standard footrest extension** gives more support to the feet, reducing pressure on the back of the calves and increasing relaxation to the feet. This often helps address cold feet issues.
- **The full-recline position with the feet fully elevated** allows for maximum comfort and is ideal for napping. The feet can be elevated above the upper body in this fully open position.
- **Standard arm and headrest covers** are supplied with the chair. This allows for easier care and maintenance of the chair and increases fabric protection.
- **Optional headrest and lumbar pillow** can be added to the chair to further enhance comfort and positioning.
