and and back to the previous petal pull wire around to right to create x below the loop.			
SEE NEXT PAGE	I call this the " X " below the loop	Create next loop and X	and and back to the previous petal pull wire around to right to create x
	SEE NEXT PAGE		

Move to next loop until you reach original loop or X/crossing	Start new row, take wire unt the X and bring wire around to right	Insert wire under the next x
Work your way around continue	Until you run out of wire. Note tuck this wire under.	Turn upside down to add next wire
Cut tails length ¼ inch. Using the thumb to hold the ends of wires. To help holding on. You can leave tails longer, but need to trim them next time around.	Work around the new and old wire tail. You are creating a cage around the tails of the wire.	Take the wire end under the new and old wire tail

If you can't get the wire under use a pin or your awl to lift the tails	Again, tails should only be ¼ inch long. With new wire work around 3to 5 rows to capture tails.	Work around
3 to 5 times around the tails and cut off any extra tails.	Add wire as needed.	When done carefully cut the first loops made off your flower petals.
	Flowers can be reused.	
Flowers can be reused.
