Dear Shaver Lake Heights Water Association Member

As you should know, a series of heavy winter storms have hit the Shaver Lake area. As a result, power in the West Village has been disrupted. Southern California Edison has not given us an official estimate when power will be restored. You can check their website to determine your status at

<https://www.sce.com/outages-safety/outage-center/check-outage-status>

The roads have been plowed but be advised the snow berms are huge and may require additional shoveling to access property.

Our backup generator for our water system has also failed. A service call has been made but unfortunately someone will not be on site until Thursday. Currently there is no water pressure. We hope to get the system operational as soon as possible but cannot guarantee water will be restored until after servicing the generator.

If possible, we do not recommend travelling to the Shaver West Village area until after water and power has been restored. If you are already up there, you should consider alternatives.

Please stay safe and if an emergency arises call 911.

Regards,
Shaver Lake Heights Water Association
Board of Directors
