A Brief Introduction to Emilia-Token and the Crypto Ecosystem

It has always been the responsibility of a government to enact policy that responds to the needs of the people. Here at Emilia-Token we want to change this and put the power into the peoples hands. With plans of DOA in the future we'll bring equality to the holders through a fair voting system that will not only take into account the largest holders but also what the majority holders want with a "Fair Voting System" FVS for short. More on this later. Emilia-Token's plan is to bring hyper deflationary assets to the next level, with our limited 100 token supply and consistent monthly 5% burns (subject to change) the supply will always be burning up even if there's no volume.

Today, High supply Tokens dominant the space.

Typically crushing the average investor as they try to get a "Good Average"

Catchy naming conventions trick average investor into these high supply tokens.

Investors 18-65 are at 100% higher risk of being scammed by these High supply tokens then in the year 2000 as more investors are in the space today then ever.

Chapter 1:

The Impact of Doing Nothing

When considering the crypto space, the potential impact on society and our shared quality of life goes beyond just what happens to a segment of our youth. It extends far past a couple young adults getting scammed and losing out on a couple hundred dollars.

Strain on BSC Networks

The most obvious, of course, is the direct impact on our BSC Network. For every new project that is tabled, the network is significantly labored by the increase of token releases. This drives up costs of transactions even at the smaller cost that BSC brings to the space.

Lack of Productivity

Firstly, the idea of long-term project growth has been killed. It's now all about getting together five to ten different people to create "Pump and Dumps" schemes that hurt the overall community and cause peoples miss-trust in the space. We can also notice once these project have been released and the price pumps the productivity stops and the developers typically leave the project.

Neglected Population Segments

Our ability to treat people within the crypto setting is determined by limited resources (finances, people, facilities, etc.). When thinking about the costs of listing a new project you can start with as low as 8 dollars. Young people grow older and introduce their numerous ideas to our system, and use their resources to manage the current issues from existing projects. Which in most cases turn out to be either rug pulls or just scams in general.

This is just a short list of those who would become scammed and leave the space:

- Third world countries
- New immigrants
- Individuals dealing with long-term chronic illnesses, or various diseases and cancers
- Those dealing with mental health issues
- Veterans

When the BSC network suddenly begins to slow down due to the new projects being listed and the costs of the average transaction goes up by over 100% various groups of people (even just by 5%) start a ripple effect which causes miss-trust and leave the space forever believing that the whole space is a scam. Everyone is here for a quick buck and Emilia-Token is here to change that for long term holders.

Chapter 2: The Fee Proposal: Implementation, Purpose, Expectations

Emilia-Token wants to stay on top when it comes to low fees, High percentage burns (5% monthly) and longevity. By bringing an ecosystem of 1% fees on buys and sells we're lowering the cost of entry even further to hyper deflationary assets.

Our current fee structure is as listed below:

.25% for burning

.25% for reflections

.25% for marketing wallet

.25% for liquidity injection

We believe that this brings the best of what all crypto has to offer and we're bringing it to you for 1%. We know how much the community love reflections (The behavior of your wallet increasing as transactions happen). So we made sure to include this in our fee structure.

Dex

We plan on having our own Dex Q4 of 2023, this will include a website similar to pookoin.app that allows users to view and trade new cryptos easily. With this Dex we plan on making sure to have a "Security Scanner" SS that will automatically show assets with certain supplies and use parts of Token Sniffer to valid the contracts "Safety" score.

Cross Chain Swap

In Q2 2023 we plan on dropping our own swap for the community which will have the normal fees of Emilia-Token and strive to drop the average cost of swaps that are seen on pancake swap because of the higher volume. This Cross-Chain swap will allows users to swap Coins like ETH for BNB or BNB or ETH....with more chains planned in the future!

Betting platform

By Q4 of 2023 we plan on integrating our own "Price Prediction Betting Platform" PPBP for short. This will allows user to "Place bets" on the future price of not only Emilia-Tokens. But also popular coins such as BNB, ETH, and more! This will be an exciting feature as .25% will burn Emilia-Tokens every transaction.

Manual burns

We plan on doing manual burns monthly of 5% of the current circulating supply. With over 18% of the supply already burnt up...we're setting ourselves apart from other tokens with high supply that would take years to burn through.
